PREFACE

The ICAR–Indian Institute of Rice Research (ICAR-IIRR) is a premier rice institute in the country. Through the ***All India Coordinated Research Project on Rice (AICRPR)***, ICAR-IIRR coordinates multi-disciplinary and multi-location testing of varietal improvement, crop protection, and crop management technologies across diverse ecosystems to enhance and stabilize rice production in India.

ICAR-IIRR, ICAR-CRRI, and ICAR-IARI, as nodal agencies, facilitate collective planning, supply, and exchange of improved germplasm and experimental material for evaluation, trial monitoring, data collection, compilation, analysis, and documentation. These institutes have also monitored the conduct of trials at several funded and voluntary centres within their respective ecologies through field visits. More than 300 scientists across 41 funded cooperating research centres and about 74 voluntary centres—affiliated with State Agricultural Universities, State Departments of Agriculture, ICAR institutes, and private sector organizations—have carried out planned activities in the disciplines of Breeding, Entomology, Pathology, Agronomy, Soil Science, and Plant Physiology.

The results of 33 breeding trials and 4 hybrid trials conducted under irrigated, rainfed, and basmati ecosystems across the country during Kharif 2025 are presented in this volume. Developing varieties and hybrids with tolerance to biotic and abiotic stresses, along with desirable grain quality suitable for diverse ecologies, remains a challenging task for rice breeders, requiring sustained and dedicated efforts.

Focused initiatives are underway to usher in a green revolution in eastern India by testing and validating suitable varietal technologies for fragile ecosystems such as rainfed uplands, lowlands, and semi-deep and deep-water ecologies. Efforts are also directed towards developing varieties tolerant to soil stresses and cold conditions in high-altitude regions under both upland and irrigated ecosystems. Conventional and molecular breeding approaches are being employed to overcome the stagnation in yield levels in irrigated ecosystems, which contribute more than 60% of the total rice production.

Simultaneously, efforts are ongoing to develop rice hybrids with higher heterosis across different duration groups, including medium slender grain-type hybrids to meet the preferences of farmers and consumers in southern India. Another priority area is the development of export-quality basmati and indigenous short-grain aromatic varieties with essential quality traits catering to both domestic and international markets.

Near-Isogenic Lines (NILs) with resistance to major biotic stresses (blast, bacterial blight, and gall midge) and abiotic stresses (drought and submergence) are under evaluation. While emphasis on boro rice improvement continues, efforts are also being made to identify suitable varieties for emerging challenges such as water scarcity through aerobic trials. Additionally, pilot trials have been initiated on Direct Seeded Rice (DSR), short slender grain types along with MS trials, and Nutrient Use Efficiency (NUE), focusing on nitrogen and phosphorus. Breeder seed production of 546 rice varieties was organized across 41 locations as per DAC indents.

The strong partnership of the AICRPR network with IRRI, Philippines and other International partners, continues to provide access to elite global rice germplasm through the exchange of breeding lines. With delayed monsoon becoming increasingly frequent due to climate change, efforts are also being directed towards identifying early-maturing varieties suitable for late-sown, direct-seeded conditions.

I sincerely appreciate the efforts of the Principal Investigator, scientists, and the technical, administrative, project, and field staff of the Crop Improvement team at this Institute, along with all cooperating scientists from both funded and voluntary centres, for bringing out this volume

(R M Sundaram)

Director

SUMMARY

ICAR-Indian Institute of Rice Research (ICAR-IIRR) conducts and coordinates multidisciplinary and multi-location evaluation of elite cultures, crop management and crop protection technologies in different agro-climatic zones of the country under All India Coordinated Rice Improvement Project (AICRPR) to enhance rice production. A total of 37 trials (33 varietal trials and 4 hybrid rice trials) were conducted in 1055 experiments (939 varietal and 116 hybrid rice) at 115 locations (41 funded, 74 voluntary centres) in 28 states and 5 union Territories across seven zones of the country during 2025 which is the 61th year of AICRPR testing. Hybrid rice experiments were also conducted by 20 private seed companies. The 37 trials were constituted with 1222 entries (1153 varietal and 69 hybrid rice) including 166 checks. The overall data receipt was 91% of which 95% and 87% data was received from funded and voluntary centres respectively.

The MAS products with introgressed genes/QTLs conferring tolerance/ resistance to drought, submergence, salinity, BLB and blast are verified and validated in trials on Near Isogenic Lines. Improvement in grain quality along with high yield potential was focussed in Basmati and Aromatic Grain Type trials. Alkaline and inland saline as well as coastal saline tolerant variety trials are evaluated to identify the stress tolerant elite cultures. In view of the growing water scarcity, Aerobic trials were constituted to identify appropriate genotypes for aerobic method of rice cultivation. Separate NPT trial was conducted to evaluate the yield performance of entries derived from *indica*/tropical *japonica* crosses with ideal plant type traits including strong culm, more grain number with low unproductive tillers. The genetic improvement of rice genotypes with tolerance to low phosphorus and nitrogen was addressed to minimize usage of nitrogenous and phosphatic fertilizers thereby reducing cost of rice production.

Summary of the Co-ordinated Trials (Irrigated) – Kharif 2025

A total of 37 trials (33 varietal trials and 4 hybrid rice trials) were conducted in 1055 experiments (939 varietal and 116 hybrid rice) at 115 locations (41 funded, 74 voluntary centres) in 28 states and 5 union Territories. The 37 trials were constituted with 1222 entries (1153 varietal and 69 hybrid rice) including 166 checks. As a whole, 36 entries after three years of testing were found promising in terms of grain yield and quality parameters, 57 were promoted to final year of testing (AVT-2) and 214 entries were promoted for second year of testing (AVT-1).

1 ADVANCE VARIETY TRIAL 2&1 Early Transplanted (AVT 2&1 - E TP)

Locations: 47

Test entries: 23

Checks: CO-51 (National); PR 124 (Northern), Narendra 97 (Eastern) Luit (North Eastern), Sahbhagi Dhan (Central & Western), MTU 1153 (Southern)- Zonal; US 314 (Hybrid) and local check

List of the entries performed superior in AVT2-ETP:

IET 31436 (H) -VNR-234/Hybrid: Found promising for Z II and III, but recorded high AC (28.39%) & Low GC (22), which are not in acceptable range.

IET 30637 - CR4075-1341-3-3-2-2-1-4-3 (Jaya/PKV HMT): Found promising for Z IV and also recorded acceptable grain quality parameters.

List of the entries promoted from AVT 1 – ETP to AVT 2 – ETP

Zone II: IET 32387

Zone III: IET 32427, IET 32402, IET 32396

Zone IV: IET 32402

Zone V: IET 32387, IET 32402, IET 32396

Zone VI: IET 32402

Zone VII: IET 32395, IET 32396

2 INITIAL VARIETY TRIAL – Early Transplanted (IVT ETP)

Locations: 49

Test entries: 61

Checks: CO-51 (National); PR 124 (Northern), Narendra 97 (Eastern) Luit (North Eastern), Sahbhagi dhan (Central & Western), MTU 1153 (Southern)- Zonal; and local check

List of the entries promoted from IVT-ETP to AVT1-ETP

Zone II: IETs 33384, 33387, 33393

Zone III: IETs 33383, 33385, 33386, 33387, 33393, 33394, 33400, 33404, 33405, 33412, 33428, 33431, 33439

Zone IV: None

Zone V: IETs 33385, 33412, 33439

Zone VI: None

Zone VII: None

3 ADVANCE VARIETY TRIAL 2 &1 Irrigated Medium Early (AVT 2&1 - IME)

Locations: 48

Test entries: 28

Checks: Gontra Bidhan-3 (National); PR 113-(Northern), Lalat (Eastern and North Eastern), Karjat 7 (Western), MTU 1010 (Central and Southern)-Zonal; US 312-Hybrid and Local Check

List of the entries performed superior in AVT2-IME:

IET 31448 (Hybrid) HRI-217: Promising for Zones II, IV, & VI

IET 31603 (YNP- 7258) YNP 85/YNP 27 : Promising for Zones II, III, V & VI

IET 30713 (CR 4077-1357-5-4-2-1-1) PKV HMT /Vandana: Promising for Zone III only

IET 31452 (Hybrid) RRX-3341: Promising for Zones III & V

IET 31466 (AGRH-01): Promising for Zone III

IET 31608 (CR4396-291-2-6): Promising for Zone IV

Entries promoted to third year of testing (from AVT1-IME to AVT2-IME):

Zone II:	IET 33046
Zone III:	IETs 32443, 32447, 32448, 32460 and 32465
Zone IV:	IET 33046
Zone V:	IET 33046, 32465, 33020
Zone VI	IET 32465
Zone VII	IET 32465, 33046

4 INITIAL VARIETY TRIAL- Irrigated Medium Early (IVT-IME)- Kharif 2025

Locations: 49

Test entries: 61

Checks: Gontra Bidhan-3 (National); PR 113-(Northern), Lalat (Eastern and North Eastern), Karjat 7 (Western), MTU 1010 (Central and Southern)-Zonal and Local Check

List of the entries promoted from IVT (IME) to AVT1 (IME): 12

Zone II	: IETs 33440, 33461, 33468 and 33478
Zone III	: IETs 33445, 33453, 33460, 33461, 33468, 33472, 33476, 33490 and 33496
Zone IV	: IET 30692
Zone V	: None
Zone VI	: None
Zone VII	: IETs 33457 and 33476

Note: IET 30692 was not included for testing in zone IV during kharif 2025, hence will be included for testing Zone –IV in AVT-1 in kharif 2026

5 ADVANCED VARIETY TRIAL- Irrigated Medium (AVT – IM) - Kharif 2025

Locations: 47

Test entries: 47 (43+4)

Checks: National check– NDR 359; Zonal checks-PR 121 (Northern), CR Dhan 300(Eastern and North Eastern), Karma Mahsuri (Central), Akshaya Dhan (Western), Jaya (Southern), Hybrid check- HRI 174 and Local check

List of entries performed superior in AVT 2 - IM based on yield

Zone II: None

Zone III: IET 31480, IET 31633, IET 31638, IET 31643

Zone IV: IET 29877, IET 31480, IET 31618, IET 31638

Zone V: IET 29860, IET 29877, IET 31480, IET 31618, IET 31638, IET 31641, IET 31659

Zone VI: IET 31480

Zone VII: IET 31638

List of entries promoted from AVT 1 (IM)- IM to AVT-2 (IM)

Zone II: IET 32530

Zone III: IET 32526, IET 32530, IET 33071

Zone IV: None of the entries are promoted

Zone V: IET 32530, IET 33052, IET 33055

Zone VI: IET 32530, IET 33052

Zone VII: IET 32530

6 INITIAL VARIETY TRIAL- Irrigated Medium (IVT-IM)- Kharif 2025

Locations: 49

Test entries: 61

Checks: NDR-359 (National); PR 121 (Northern), CR Dhan 300(Eastern and North Eastern), Karma Mahsuri (Central), Akshaya Dhan (Western), Jaya (Southern), Zonal check and Local check

List of the entries promoted from IVT (IM) to AVT1 (IM)

Zone II: None of the entries promoted

Zone III: IET 33503, IET 33507, IET 33518, IET 33519, IET 33528 , IET 33529, IET 33534, IET 33547, IET 33548, IET 33549, IET 33550

Zone IV: IET 33505, IET 33511, IET 33537, IET 33539, IET 33547, IET 33560

Zone V: IET 33519, IET 33539

Zone VI: None of the entries promoted

Zone VII: IET 33517

7 ADVANCE VARIETY TRIAL 2&1 Irrigated Late (AVT 2&1 - Late)

Locations: 44

Test entries: 9

Checks: Swarna (National), Pusa 44 (Northern), NDR 8002 (Eastern & Central), Ranjeet (North-Eastern), Salivahana (Western), Pushyami (Southern), PA 6444 -HC and Local check

List of the entries performed superior in AVT2-Late:

In late duration trials, there is one hybrid entry (**IET 30882**) which have completed 4 years of testing (2022 to 2025) and three hybrid entries (**IET 31686, IET 31709, IET 31714**) which completed three years of testing (2023-2025).

IET 31686 (PAN 21514) significantly outperformed the best varietal and hybrid check for two years *ie.*, 1st year (6144 kg/ha) and 2nd year (6353 kg/ha) in Zone VI, whereas it showed superiority only for first year (7066) in Zone IV. **Hence it is promising in Zone VI.**

IET 31709 (PAN 21039) significantly outperformed the best varietal and hybrid check in Zone III, Zone V, Zone VI and Zone VII. **Hence it is promising in Zone III, Zone V, Zone VI and Zone VII**

IET 31714 (PHI-23104) showed no significant outperformance over the best varietal and hybrid check in any zone. Hence, ***It is not promising.***

IET 30882 (CRHR 166), a derivative of the cross CRMS 32A / CRL 123-122-21 showed no significant outperformance over the best varietal and hybrid check in any zone. Hence ***It is not promising.***

Entries promoted to third year of testing (from AVT1-Late to AVT2-Late): Two (2)

Promising lines in AVT 2 : None

12 Hybrid Rice

Hybrid rice is a proven technology for increasing rice production and productivity and is playing an important role in increasing the rice production in our country. As a result of concerted efforts over the last three decades, 181 hybrids have been released and notified for commercial cultivation. Among these, 49 hybrids have been developed by the public sector, while the remaining 132 have been developed by the private sector. During the year 2025, hybrid rice was planted in an area of 4.0 m. ha. and more than 80% of the total hybrid rice area is in the states of Uttar Pradesh, Jharkhand, Chhattisgarh, Madhya Pradesh, Odisha and Haryana.

Promising hybrids identified in different hybrid rice trials (2025)

Name of the Hybrid	IET No.	DFP	Promising in
IHRT-E			
CTVA-25104	34009	92	Promoted Zone II, III, VI & VII

15 ADVANCE VARIETY TRIAL 2&1 Medium Slender (AVT 2&1 - MS)

Locations: 40

Test entries: 9

Checks: National Checks (NC): WGL 14 (NC, Medium), BPT 5204 (NC, Late), Telangana Sona (NC, Early), Zonal Checks (ZC): Improved Samba Mashuri (Eastern & Central), ADT-49 (Southern), Ketekijoha (North Eastern), Karjat-6 (Western), Local Check (LC); Hybrid Check (HC): 27P63

Entries promoted to third year of testing (from AVT1-MS to AVT2-MS):

Zone II:	None
Zone III:	IET 33084
Zone IV:	None
Zone V:	None
Zone VI	IET 33084, IET 32680
Zone VII	None

16 INITIAL VARIETY TRIAL- Medium Slender (IVT-MS)

Locations: 40

Test entries: 59

Checks: National: Telangana Sona (NC-Early), WGL 14 (NC-Medium), BPT 5204 (NC-Late); Zonal: Improved Samba Mahsuri (Eastern and Central), Ketekejoha (North Eastern), Karjat-6 (Western) & ADT49 (Southern) and Local Check.

List of the entries promoted from IVT to AVT1

Zone III	IETs 33736
Zone V	IETs 33710, 33728, 33730, 33736
Zone VI	IETs 33683, 33697, 33722, 33728
Zone VII	IETs 33685, 33690, 33691, 33697, 33702, 33704, 33722, 33729

17 ADVANCE VARIETY TRIAL 2 & 1 BIOFORTIFICATION (AVT 2 & 1 - BIOFORT)

Locations: 37

Test entries: 13

Based on yield advantage, two entries (IET 32729 and IET 32769) under second year of testing were promoted to AVT 2 in Zone VI. **But, they were not promoted based on Fe & Zn values:** IET 32729 – 1.83 ppm Fe, 20.56 ppm Zn ; IET 32769 – 1.76 ppm Fe , Zn – 20.05. **Therefore, none were promoted to AVT 2.**

18 INITIAL VARIETY TRIAL BIOFORTIFICATION (IVT - BIOFORT)

Locations: 39

Test entries: 44

Despite several entries being promoted on the basis of grain yield advantage, only two entries were promoted based on grain and Zinc content and three entries were promoted based on protein content.

Entries promoted to AVT 1 based on Zinc content & Grain Yield

Zone	IET Numbers
Z IV	IET 33772
Z VI	IET 33780

Entries promoted to AVT 1 based on Grain Protein content & Grain Yield

Zone	IET Numbers
Z IV	IET 33758, IET 33779, IET 33780

23 ADVANCED VARIETY TRIAL 2 & 1 - Alkaline and Inland Saline Tolerant Variety Trial (AVT 2 &1 - AL & ISTVT), Kharif, 2025

Locations: 18

Test entries: 11

Checks (7): CSR 36 (Alkaline check), CSR 10 (Early duration saline check), FL 478 (Saline Tolerant check), CSR 23 (Inland Saline check), Pusa 44 (Sensitive check & RP), PR127 (Observational Sensitive Check) and Local check

AVT2- AL & ISTVT

Two entries IET Nos. 31862 and 31858 tested in four zones (Z- II, III, VI & VII) and completed three years of testing.

Alkaline conditions: Zone – II & III: IET Nos. 31862 and 31858

Inland saline conditions: Zone – VI: IET Nos. 31862 and 31858

AVT1- AL & ISTVT

Nine entries in total tested in four zones (Zone-II, III, VI & VII) under alkaline and inland saline conditions.

Alkaline Conditions

Zone-II: IET Nos. 32776 & 32792

Zone-III: IET Nos. 32788 & 32783

Inland Salinity

Zone-II: IET Nos. 32788, 32783, 32776, 32792 & 32778

Zone VII: IET Nos. 32780, 32785 & 32778

Entries promoted from AVT1- AL & ISTVT to AVT2 -AL & ISTVT

IET Nos. 32788, 32783, 32776, 32792, 32778, 32780, 32785

24 INITIAL VARIETAL TRIAL - Alkaline and Inland Saline Tolerant Variety Trial (IVT- AL & ISTVT)

Locations: 18

Test entries: 21

Checks (7): CSR 36 (Alkaline check), CSR 10 (Early duration saline check), FL 478 (Saline Tolerant check), CSR 23 (Inland Saline check), Pusa 44 (Sensitive check), PR127 (Observational Sensitive Check) and Local check

IVT - AL & ISTVT

Nine entries in total tested in four zones (Zone-II, III, VI & VII) under alkaline and inland saline conditions.

Alkaline Conditions

Zone II : IET 33797

Zone III : IET 33797

Zone VII: IET 33804

Inland Salinity

Zone II: IET Nos. 33796 & 33788

Zone VII: IET Nos. 33788 & 33789

IET Nos. 33797, 33804, 33796, 33788 & 33789 promoted to second year of testing in AVT1- AL&ISTVT.

25 ADVANCED VARIETY TRIAL 2 & 1 - Coastal Saline Tolerant Variety Trial (AVT 2 &1 CSTVT), Kharif, 2025

Locations: 14

Test entries: 16

Checks (6): Bhuthnath (Coastal Saline Check), FL478, CSR 10 (Early duration check), Pusa 44 (Sensitive check), PR 127 (Observational check) and Local check

AVT1- CSTVT

Thirteen entries tested in three zones (Z-III, VI & VII)

None of the entries in AVT1-CSTVT merit promotion to AVT 2-CSTVT.

AVT2- CSTVT

Three entries tested in three zones (Z-III, VI & VII). IET Nos. 31877, 31878 and 31067 completed three years of testing.

Zone – III : IET Nos. 31877 and 31878

Zone – VI : IET 31067

26. INITIAL VARIETY TRIAL - COASTAL SALINE TOLERANT VARIETY TRIAL (IVT - CSTVT), Kharif, 2025

Locations: 14

Test entries: 31

Checks (6): Bhuthnath (Coastal Saline Check), FL478 (Saline Tolerant check), CSR 10 (Early duration check), Pusa 44 (Sensitive check), PR 127 (Observational check) and Local check

Promotion of entries from IVT-CSTVT to AVT1-CSTVT

Zone-III: IET Nos. 33830, 33826, 33823, 33806, 33822 & 33824

Zone-VI: IET 33813

IET Nos. 33830, 33826, 33823, 33806, 33822, 33824 & 33813 are promoted to AVT1-CSTVT

Near Isogenic Lines (NIL's) in the genetic background of CARI Dhan 5:

IET 32984 found promising for the zone VII.

27 ADVANCE VARIETY TRIAL 2&1 and INITIAL VARIETY TRIAL – AROMATIC GRAIN TYPE (AVT 2&1 & IVT AGT)

Locations: 35

Test entries: 34

Checks: Shobini (National), Badshabhog Sel-1 (Northern & Central), CR Sugandh Dhan 907 (Eastern & North Eastern), GAR – 14 (Western) Sugandh Samba (Southern) – Zonal, Dubraj Sel-1 and Ketekijoha – Quality, Rajendranagar Vari-2 (RNR 15435) – Long Grain Check and Local check.

Entries promoted from AVT1 (AGT) to AVT 2 (AGT)

Zone II:	None
Zone III:	IET 32846
Zone IV:	IET 32846
Zone V:	None
Zone VI	None
Zone VII	None

Entries promoted from IVT (AGT) to AVT1 (AGT)

Zone II:	None
Zone III:	IETs 33925, 33932
Zone IV:	IETs 33932, 33924, 33925, 33921
Zone V:	None
Zone VI	None
Zone VII	IET 33920

28 ADVANCE VARIETY TRIAL 2&1 Low Phosphorus Tolerance (AVT 2&1 - LPT)

Locations: 8

Test entries: 31

Checks: Tolerant –Swarna, DRR Dhan 60, Rasi and Vandana (Early check)
Sensitive – Improve Samba Mahsuri

List of the entries performed superior in AVT 2 - LPT:

IET 31102 (R): Z VII
IET 31107: Z VII
IET 31968: Z III
IET 31969: Z III and Z VII
IET 31976: Z VII
IET 31980: Z VII
IET 31982: Z III
IET 29546 (R): Z VII

List of the entries promoted from AVT 1 - LPT to AVT 2 - LPT: None

29 INITIAL VARIETY TRIAL LOW PHOSPHORUS TOLERANCE (IVT - LPT)

Locations: 10

Test entries: 15

Checks: Tolerant –Swarna, DRR Dhan 60, Rasi and Vandana (Early check)
Sensitive – Improve Samba Mahsuri

List of the entries promoted from IVT LPT to AVT1-LPT:

Zone III: IETs 33857, 33852, 33861, 33850 and 33856

30 ADVANCE VARIETY TRIAL 2&1 LOW NITROGEN TOLERANCE (AVT 2&1 - LNT)

Locations: 10

Test entries: 18

Checks: Tolerant –Swarna, DRR Dhan 64, Rasi and Varadhan (Early check)
Sensitive – Improve Samba Mahsuri

List of the entries performed superior in AVT2-LNT:

IET 31990: Promising for Z II and Z III

IET 32010: Promising for Z II.

List of the entries promoted from AVT 1 - LNT to AVT 2 – LNT

Zone II: IET 32889 and IET 32891

31 INITIAL VARIETY TRIAL LOW NITROGEN TOLERANCE (IVT - LNT)

Locations: 11

Test entries: 17

Checks: Tolerant –Swarna, DRR Dhan 64, Rasi and Varadhan (Early check)
Sensitive – Improve Samba Mahsuri

List of the entries promoted from IVT LNT to AVT 1 - LNT

Zone II: IETs 33878, 33875, 33868, 33867, 33862 and 33872

Zone VI: IETs 33865 and 33870

32 ADVANCE VARIETY TRIAL 1 & INITIAL VARIETY TRIAL – Coloured Rice (AVT1&IVT –Colour):

Locations: 34

Test entries: 37

Checks: Choharto (Red rice Check), Jyothi (Matta Red Rice Check), Kauni (Black Rice check) and Local check

Zones	AVT 1 CR to AVT 2 CR	IVT CR to AVT 1 CR
Zone I:	None	None
Zone II:	IET 28664 and IET 32025	IET 33899
Zone III:	IET 28664 and IET 32896	IET 33888 and IET 33908
Zone IV:	IET 32896	None
Zone V:	IET 32896	IETs 33888, 33898, 33903, 33904, 33905 and 33908
Zone VI	None	None
Zone VII	None	None

33 ADVANCE VARIETY TRIAL 2&1 NIL (AVT 2 & 1 NIL)

Performance of NILs and GELs (AVT 2 & 1 NIL & GEL Trials)

NILs of Samba Mahsuri (BPT 5204)

IET 32964 recorded at par yield with improved blast resistance but was dropped due to grain type and quality issues.

IET 30952 recorded inferior yield and was dropped.

NILs of Pusa 44

IET 32046 recorded inferior yield and was dropped.

IET 29546 recorded at par yield under Low P condition, hence dropped

NILs of CARI Dhan 5

IET 32984 found promising for Zone VII with superior yield and improved bacterial leaf blight resistance.

NILs of WGL 14 (Warangal Samba)

IET 33837 and IET 33838 recorded inferior yield and undesirable disease reactions; both were dropped.

NILs of DRR Dhan 53

IET 32980 showed superior yield in some zones and resistance reaction, hence promoted.

NILs of Swarna

IET 33839 and IET 33840 exhibited inferior yield despite better sheath blight resistance; both were dropped.

NILs of DRR Dhan 50

IET 32981 showed superior drought performance but inferior yield under normal conditions; dropped.

IET 33841 recorded at par yield and is recommended for repeat testing.

NILs of CO 59

IET 32986 (at par yield) and IET 32987 (inferior yield) were not evaluated under stress conditions; both recommended for repeat testing.

NILs of CO 51

IET 32989 and IET 32988 recorded significantly inferior yield; both were dropped.

NILs of 28P67

IET 32990 found promising with improved yield and better bacterial leaf blight resistance in Zones III and V.

NILs of SAVA 7501

IET 33994 could not be evaluated due to poor trial conditions; recommended for repeat testing.

NILs of 28P68

IET 33995 recorded at par yield but no significant improvement in bacterial leaf blight resistance; dropped.

Genome Edited Lines (GELs)

GEL of MTU 1010

IET 33842 recorded inferior yield performance and was dropped.

GELs of ASD 16 (Aroma lines)

IET 33843 (mild scent) and IET 33844 (strong scent) showed at par yield with improved grain quality; both were promoted.

GELs of ASD 16 (Yield lines)

IET 33845 recorded superior yield and was promoted.

IET 33846 showed only marginal yield advantage and performed at par; hence dropped.

34 ADVANCE VARIETY TRIAL 1 (Irrigated-DSR)

Locations: 35

Test entries: 17

Checks: Sahbhagi Dhan (Early), DRRH 4 (Early Hybrid), DRR Dhan 70 (Medium), DRR Dhan 55 (Medium), CR Dhan 702 (Late Hybrid), DRR Dhan 50 (Late), Local check

List of promising entries promoted from AVT 1-DSR promoted to AVT2 – DSR

Zone II: IETs 32917,

Zone III: IETs 32917, 32918, 32922, 32924

Zone IV: IETs 32922, 32924

Zone V: IETs 32917, 32918, 32924

Rice Genetic stocks registered during 2025-26 at ICAR – NBPGR, New Delhi

S. No	INGR NO./ EC/IC No.	Botanical Name	Other Identity	Pedigree	Potentially valuable features	First developer
1.	25001/ EC 792285	<i>Oryza sativa</i>	1723/ CAROLINA GOLD; TKM 201	Unknown	• Saline submergence tolerant at germination stage • Germination% (5 DAS) = 63.27%, • Survival% (10 DAS) = 62.24%	Dr Tapan K Mondal ICAR-NIPB, Pusa Campus, New Delhi
2.	25002/ IC 654536	<i>Oryza sativa</i>	RP-GP-3000-179-3-9-1	MTU 1121/Vijetha	Dual resistance • Brown plant hopper (DS:3.4) and White backed plant hopper insects in rice (DS: 3.7) • Stable resistance at 4 locations/ environments	Dr G. Padmavathi ICAR-IIRR, Hyderabad Telangana
3..	25003/ IC 216735	<i>Oryza sativa</i>	IC216735	IC216735 Introduction and Selection	• Resistance to Brown planthopper (<i>Nilaparvata lugens</i>) in rice with a damage score of 2.7. • Resistance to brown planthopper at vegetative stage in rice • Resistance to brown plant hopper at reproductive stage in rice	Dr. Jhansi Lakshmi V, ICAR-IIRR Hyderabad
4.	25004/ IC 76057	<i>Oryza sativa</i>	IC76057	IET-9926/Swarnadan / veluthacheera	• Resistance to brown planthopper (<i>Nilaparvata lugens</i>) in vegetative and reproductive stage. Damage score of 2.6.	Dr. Jhansi Lakshmi V, ICAR-IIRR Rajendranagar, Hyderabad
5.	25005/ IC 654537	<i>Oryza sativa</i>	CR4423-17	-doubled haploid line from F1 of Savitri X Pokkali	• Osmotic Tolerance/ drought tolerance with 16% reduction in shoot dry weight at 1% mannitol and 22.5% at 2% Mannitol. • High anaerobic germination potential, anaerobic germination index = 60.6%, epicotyl length=18.6 cm. • Salinity tolerance with visual salt injury score = 5. • Submergence tolerance = 65.5% survival percentage	Dr Sanghamitra S ICAR-NRRI, Cuttack, Odisha
6	25006/ IC 654538	<i>Oryza sativa</i>	NWGR-11048	doubled haploid line from F1 of Savitri X Pokkali	• The genotype is found resistant against sheath rot (susceptibility index =4.4). • Resistant against grain discoloration (SI= 3.5). • Resistant against rice tungro disease (SI = 3.0)	Dr. RK Gangwar, MARS, AAU, Nawagam, Gujarat

S. No	INGR NO./ EC/IC No.	Botanical Name	Other Identity	Pedigree	Potentially valuable features	First developer
7	25042/ IC 658167	<i>Oryza sativa</i>	TKM 85/ Pokkali- BJJ/10-2	Collection from Ayyampilly Ernakulam, Kerala	• Saline submergence tolerant at germination stage: Germination % (5 DAS) =90.749%, Survival % (10 DAS) =91.58% (EC= 5 dSm-1; 42.92 mM NaCl and 10 dSm-1; 85.83 mM NaCl) • Least reduction in root dry weight (0.02gm) and Enhancement in shoot dry weight (0.06gm) under drought stress 12.8 % mean leaf chlorophyll content enhancement under salinity stress • Least reduction in shoot dry weight (0.03gm) under salinity stress	Dr Tapan K Mondal ICAR-NIPB Pusa Campus, New Delhi
8	25043/ IC256568	<i>Oryza sativa</i>	AC-34975/ Chadhei nakhi; PB-56	Collected from Pravasuni Tileibani Deogarh, Odisha	• Osmotic/dehydration tolerance at seedling stage with higher shoot dry weight (0.052g) under severe osmotic stress (2% mannitol) compared to tolerant genotypes Vandana and FL 478(0.02g)	Dr Prashantkumar S Hanjagi ICAR-NRRI, Cuttack, Odisha
9	25044/ IC658168	<i>Oryza sativa</i>	CRAC4423 -14	Savitri/Pokkali	• Osmotic/dehydration tolerance at seedling stage with higher shoot dry weight (0.052g) under severe osmotic stress (2% mannitol) compared to tolerant genotypes Vandana and FL 478(0.02g)	Dr Sanghamitra S ICAR-NRRI, Cuttack, Odisha
10	25045/ EC1076003	<i>Oryza sativa</i>	Binnaful EC1076003	Cultivar	• Tolerant to osmotic stress (~ 4.0 bar Mannitol induced) – High shoot weight (0.055 g) and high chlorophyll content (2.2 mg/100g) • Highly tolerant to anaerobic germination (germination rate = 65.5%, high epicotyl length 35 cm) • Tolerant to salinity (NaCl induced 12 dSm-1) lowest decline in root biomass (10.49%), High chlorophyll content (1.0 mg g-1 FW), high shoot growth. Salt injury score 5.0 (moderate)	Dr. Koushik Chakraborty ICAR-NRRI Cuttack, Odisha
11	25046/ IC658169	<i>Oryza sativa</i>	IR 73784-5- 28- B-HWR- 1	IR31917-45- 3-2/ <i>O. latifolia</i> Acc 100914/ IR3 1917-45-3-2 in BC1F11 generation	• Resistance to Brown plant hopper (BPH) <i>Nilaparvata lugens</i> with a damage score of 4.1 • Resistance to brown plant hopper at vegetative and reproductive stages	Dr RM Sundaram, ICAR-IIRR Hyderabad, Telangana

S. No	INGR NO./ EC/IC No.	Botanical Name	Other Identity	Pedigree	Potentially valuable features	First developer
12	25047/ IC 658170	<i>Oryza sativa</i>	RP 5177-86	(GP SS RIL-86)	- Resistance (Damage score: 3.1) against Brown plant hopper in seedling stage - It possesses three known genes namely bph2, Bph 21 and Bph 32 governing BPH resistance.	Dr G. Padmavathi ICAR-IIRR, Hyderabad, Telangana
13	25048 / IC 658171	<i>Oryza sativa</i>	BPT 3194	BPT 5204 and MTU 1075	Resistance to BPH damage score= 3.1), WBPH (DS=4.1), mixed plant hopper populations (43.5 no./10hills) in Vegetative and Reproductive Stages	Dr B Krishna Veni ARS, Bapatla Andhra Pradesh
14	25049 / IC 658172	<i>Oryza sativa</i>	RP 6619	RP 5933-1-19-2 R/ Tetep // RP 5933-1-19-2 R/ <i>O. minuta</i> (IR 71033-121-15 derived from <i>O. minuta</i>)	Broad-spectrum blast resistance genes Pi9 and Pi54 in this male fertility restorer	Dr. Revathi Ponnuswamy ICAR-IIRR Hyderabad, Telangana
15	25050 / IC 658173	<i>Oryza sativa</i>	NLRBL-1 (UB1066)	(MTU1010 x 5809-7-1-1-1) (where 5809-7-1-1-1 is a derivative of NLR 34417 / N LR 34449)	Resistance to leaf and neck blast (with mean leaf blast score of 3.1 over ten locations and mean neck blast score of 2.3 over six locations across India)	Dr Ch. Sreelakshmi ARS, ANGRAU, Nellore, Andhra Pradesh
16	25051/ IC 658174	<i>Oryza sativa</i>	IET31956 (RP6615-MK/RIL- FBMI-45- 1-5-1)	MTU1010 × Karuppunel	- Possesses micronutrient (Zn) content (25.87ppm) in polished rice grain - Possesses Protein content of 7.69% in polished rice grain	Dr CN Neeraja ICAR-IIRR, Hyderabad, Telangana
17	25052 / IC 658175	<i>Oryza sativa</i>	IET 31933; [RP6615- MK (RIL- FBMI-2-1)]	MTU1010 × Karuppunel	- Possesses micronutrient (Zn) content (25.25ppm) in polished rice grain - Possesses Protein content of 8% in polished rice grain	Dr CN Neeraja ICAR-IIRR, Hyderabad, Telangana

IRRIGATED TRIALS

With the introduction of high yielding varieties, there has been remarkable progress in production and productivity of rice in the irrigated areas, which account for almost 60% of rice production in the country. However, the production and productivity gains achieved in this ecology need to be sustained under the scenario of decreasing land, labour and water and it is also required to be insulated against the biotic stresses, while simultaneously improving the grain quality and climate resilience. Since, the demand for food especially rice is still expected to increase with the ever-escalating population in the years to come, it is necessary to break the yield barrier through conventional methods and cutting edge technologies using diverse germplasm base, ideotype breeding and exploitation of hybrid vigour. In addition, with the advent of biotechnological tools, marker assisted breeding and genome editing for incorporating the target traits has become quite feasible in varietal improvement programmes. In view of the existing concerns and opportunities available, there is a need to identify high yielding genotypes suitable for the vast, highly productive and very important irrigated ecology.

ICAR-Indian Institute of Rice Research (ICAR-IIRR) conducts and coordinates multidisciplinary and multi-location evaluation of elite cultures, crop management and crop protection technologies in different agro-climatic zones of the country under All India Coordinated Research Project on Rice (AICRPR) to enhance rice production. A total of 37 trials (33 varietal trials and 4 hybrid rice trials) were conducted in 1055 experiments (939 varietal and 116 hybrid rice) at 115 locations (41 funded, 74 voluntary centres) in 28 states and 5 union Territories across seven zones of the country during 2025 which is the 61th year of AICRPR testing. Hybrid rice experiments were also conducted by 20 private seed companies. The 37 trials were constituted with 1222 entries (1153 varietal and 69 hybrid rice) including 166 checks. The overall data receipt was 91% of which 95% and 87% data was received from funded and voluntary centres respectively.

The chapter outlines the results obtained trial wise which are discussed below :

ADVANCE VARIETY TRIAL 2 & 1 – EARLY TRANSPLANTED (AVT 2 & 1 - E TP)

Locations: 47

Test Entries: 23

Checks: CO-51 (National); PR 124 (Northern), Narendra 97 (Eastern) Luit (North Eastern), Sahbhagi dhan (Central & Western), MTU 1153 (Southern)- Zonal; US 314 (Hybrid) and local check

Table: 1

The AVT 2 & 1 – Early Transplanted trial was constituted with 4 hybrid (one in 3rd year and 3 in 2nd year of testing) and 19 varietal entries (3 in 3rd year and 16 in 2nd year of testing) along with 4 checks; National Check - CO 51 (NC); Zonal check (ZC) Northern - PR 124, Eastern - Narendra 97, North Eastern - Luit, Central and Western Sahbhagi Dhan, Southern - MTU 1153; Hybrid check - US 314 and a Local Check. The trial was sent to 47 locations and data was not received from two locations viz., Chinsurah and Rudrur. The data from 5 locations viz., Lembucherra (Low expt. Yield = 3046 kg/ha), Jagadalpur (High CV = 31.52 %), Raipur (F non-significant), Nawagam (Low expt. Yield = 3215 kg/ha) and Kurumbapet (Based on inputs from Monitoring team) were not considered for analysis. Data from remaining 40 centers was used for analysis and entries were assessed for their yield performance. The entries are tested zone wise and therefore, performance of entries are discussed zone wise. National check was common across all zones and Zonal checks and local checks are varying depending on zone and location.

Annual Progress Report 2025 Vol. I – Varietal Improvement

In AVT-2, only one entry IET 31436 (H) recorded required significant yield superiority and its three year's performance is presented in the table. In AVT-1, nine varietal entries (IETs 32387, 32394 32433, 32396, 32402, 32427, 32399, 32378 and 32395 recorded required significant yield superiority.

Performance of the entries with required significant yield superiority over checks in AVT 2 & 1 E TP during *kharif* 2025

Annual Progress Report 2025 Vol. I – Varietal Improvement

Three year's performance of the entries IET 31436 (H), IET 30637, IET 31501 and IET 30651: Four entries completed three years of testing with required significant yield advantage over the checks. Yield performance across three years in various zones for these entries is given in the following table. IET 31436 (H) was found promising for Z II and III, and IET 30637 found promising for Z IV with acceptable grain quality.

Three-year performance of the entries in third year of testing (IET 31436 (H), IET 30637, IET 31501, IET 30651) during Kharif 2023, 2024 & 2025 Zone II, III & VI

SUMMARY

ADVANCE VARIETY TRIAL 2&1 EARLY TRANSPLANTED (AVT 2&1 - E TP)

Locations: 47

Test entries: 23

Checks: CO-51 (National); PR 124 (Northern), Narendra 97 (Eastern) Luit (North Eastern), Sahbhagi Dhan (Central & Western), MTU 1153 (Southern)- Zonal; US 314 (Hybrid) and local check

List of the entries performed superior in AVT2-ETP:

IET 31436 (H) -VNR-234/Hybrid: Found promising for Z II and III, and also recorded acceptable grain quality parameters.

IET 30637 - CR4075-1341-3-3-2-2-1-4-3 (Jaya/PKV HMT): Found promising for Z IV and also recorded acceptable grain quality parameters.

List of the entries promoted from AVT 1 – E TP to AVT 2 – E TP

Zone II: IET 32387	Zone V: IET 32387, IET 32402, IET 32396
Zone III: IET 32427, IET 32402, IET 32396	Zone VI: IET 32402
Zone IV: IET 32402	Zone VII: IET 32395, IET 32396

INITIAL VARIETY TRIAL – EARLY TRANSPLANTED (IVT - ETP)

Locations: 49

Test Entries: 61

Checks: CO-51 (National); PR 124 (Northern), Narendra 97 (Eastern) Luit (North Eastern), Sahbhagi dhan (Central & Western), MTU 1153 (Southern)- Zonal; Local check

Table: 2

The IVT – Early Transplanted trial was constituted with 61 test entries and 3 checks; National Check - CO 51 (NC); Zonal check (ZC) Northern-PR 124, Eastern-Narendra 97, North Eastern-Luit, Central and Western Sahbhagi dhan, Southern-MTU 1153; and a Local Check. The trial was sent to 53 locations and data was not received from four locations viz., Chiplima, Chinsurah, Bilaspur and Kathalgere. The data from 8 locations viz., Hazaribagh (F non-significant), CRRRI Cuttack (F non-significant), Prayagraj (Low Experimental Yield, 2369 kg/ha), Gerua (Low Experimental Yield, 3358 kg/ha), Jagadapur (Low expt. yield=3615 kg/ha), Brahmavar (Low expt. yield=3642 kg/ha, Rudrur (Low expt. yield=2345 kg/ha) and Kurumbapet (Based on inputs from Monitoring team) were not considered for analysis. Data from remaining 41 centers was used for analysis and entries were assessed for their yield performance. The entries are tested zone wise and hence performance of entries was discussed zone wise. National check was common across all zones and zonal checks and local checks are varying depending on zone and location.

ADVANCE VARIETY TRIAL 2 & 1 - IRRIGATED MIDEARLY (AVT 2 & 1 - IME)

Locations: 48

Test Entries: 28

Checks: Gontra Bidhan-3 (National); PR 113-(Northern), Lalat (Eastern and North Eastern), Karjat 7 (Western), MTU 1010 (Central and Southern)-Zonal; US 312-Hybrid and Local Check

Table: 3

Advanced Variety Trial 2 & 1 - Irrigated Mid Early (AVT 2 & 1 - IME) was constituted with 28 test entries of which 8 and 20 were evaluated in third and second years of testing respectively. In third year, five varietal and three hybrid entries while in second year, 10 varietal and 10 hybrid entries were evaluated along with four checks. Gontra Bidhan-3 as National, PR-113 in Northern, Lalat in Eastern and North Eastern, MTU 1010 in Central and Southern, Karjat 7 in western as zonal checks, US 312 as hybrid check and local check were used in the trial. The trial was sent to 48 locations across II, III, IV, V, VI and VII zones, and the data was received from all the locations except Chiplima and Kathalgere. Trial failed at Kurumbapet. The range of various parameters across the zones is presented in the following table.

Zones	II	III	IV	V	VI	VII
Zonal mean (kg/ha)	4934 (NC)-6618 (IET 31448)	4879 (NC)-6411 (IET 33020)	2853 (IET 32436)-5926 (IET 31448)	4789 (LC)-6183 (IET 33028)	3864 (ZC)-5961 (IET 31448)	4477 (ZC)-6525 (IET 33046)

@DNI-Data not considered due to low/high CV or low experimental mean yield or non-significant F value

Among the entries that completed three years of testing, two hybrid (IETs 31448 and 31452) and two varietal (IETs 31603 and 30713) entries recorded required significant yield superiority and their three years performance is presented as a table. Among the entries in the second year of testing, seven varietal (IETs 32436, 32443, 32447, 32448, 32460, 32465 and

Annual Progress Report 2025 Vol. I – Varietal Improvement

32470) and six hybrid (IETs 33025, 33028, 33046, 33020, 33018 and 33048) entries recorded required significant yield superiority.

Performance of the entries with required significant yield superiority over checks in AVT 2 & 1 - IME during kharif 2025

Three-year (2023 to 2025) performance of the entries in IME ecology: Four out of eight entries completed three years of testing with required significant yield advantage in the third year of testing over the checks. Yield performance along with ranks across three years in various zones for all the eight entries in the third year of testing in 2025 in AVT 2 & 1 - IME trial is given in the following table.

Three-year (2023 to 2025) performance of the entries in IME ecology

IET No	Year	II	III	IV	V	VI	VII	Remarks

SUMMARY

ADVANCE VARIETY TRIAL 2 & 1 Irrigated Medium Early (AVT 2 & 1 - IME)

Locations: 48

Test entries: 28

Checks: Gontra Bidhan-3 (National); PR 113-(Northern), Lalat (Eastern and North Eastern), Karjat 7 (Western), MTU 1010 (Central and Southern)-Zonal; US 312-Hybrid and Local Check

List of the entries performed superior in AVT 2 - IME:

IET 31448 (Hybrid) HRI-217: Promising for Zones II, IV, & VI

IET 31603 (YNP- 7258) YNP 85/YNP 27 : Promising for Zones II, III, V & VI

IET 30713 (CR 4077-1357-5-4-2-1-1) PKV HMT /Vandana: Promising for Zone III only

IET 31452 (Hybrid) RRX-3341: Promising for Zones III & V

IET 31466 (AGRH-01): Promising for Zone III

IET 31608 (CR4396-291-2-6): Promising for Zone IV

Entries promoted to third year of testing (from AVT 1 - IME to AVT 2 - IME):

Zone II:	IET 33.046
Zone III:	IETs 32443, 32447, 32448, 32460 and 32465
Zone IV:	IETs 33046
Zone V:	IET 33046, 32465, 33020
Zone VI	IET 32465
Zone VII	IET 32465, 33046

INITIAL VARIETY TRIAL - IRRIGATED MID EARLY (IVT- IME)**Locations: 49****Test Entries: 61**

Checks: Gontra Bidhan-3 (National); PR 113-(Northern), Lalat (Eastern and North Eastern), Karjat 7 (Western), MTU 1010 (Central and Southern)-Zonal and Local Check

Table: 4

Initial Variety Trial –Irrigated Mid Early (IVT- IME) was constituted with 61 test entries and 3 checks viz., Gontra Bidhan-3 (National check); Zonal checks -PR 113 (Northern), Lalat (Eastern and North Eastern), MTU1010 (Central & Southern), Karjat 7 (Western) and a Local check. The trial was sent to 49 locations and data was received from all the centres except Chiplima, Gerua, Bilaspur and Kathalgere. Data from three centres was excluded from analysis viz., Chata and Kanpur due to low experimental mean and Lembucherra due to insignificant F value. The range of various parameters across the zones is presented in the following table.

Parameters of the entries across the zone in IVT – IME, Kharif 2025

Annual Progress Report 2025 Vol. I – Varietal Improvement

On zonal basis, a total of 17 entries (IETs 33440, 33442, 33445, 33453, 33454, 33457, 33460, 33461, 33467, 33468, 33472, 33476, 33478, 33487, 33489, 33490 and 33496) recorded significant yield advantage over the BC. However, considering the appropriate window of 91-100 days for DFF, 12 entries (**IETs 33440, 33445, 33453, 33457, 33460, 33461, 33468, 33472, 33476, 33478, 33490 and 33496**) falling in this range are only considered for promotion.

**Performance of the entries with the required significant yield superiority over checks in
IVT - IME during *kharif* 2025**

ADVANCED VARIETY TRIAL 2 & 1 - IRRIGATED MEDIUM (IM) (AVT 2 & 1 - IM)

Locations: 47

Test Entries: 43+4

Checks: **Checks:** NDR-359 (NC); PR 121 (Northern), CR Dhan 300(Eastern and North Eastern), Karma Mahsuri (Central), Akshaya Dhan (Western), Jaya (Southern)(ZC), HRI 174(HC) and Local check **Table: 5**

Advanced Variety Trial 2 & 1 - Irrigated Medium (IM) was constituted with 43 test entries and 4 checks namely NDR-359 as National check; PR 121 (Northern), CR Dhan 300 (Eastern and North Eastern), Karma Mahsuri (Central), Akshaya Dhan (Western), Jaya (Southern) as Zonal checks, HRI 174 as Hybrid check and local check. The trial was sent to 47 locations and data was not received from one location, Kathalgere. Data from three centres were excluded from analysis viz., Mugad and Pattambi due to non-significant F Value and Ponnampet due to low CV of 1.28%. Among the centres from which data is included in analysis, location-wise mean grain yield ranged from 3817 kg/ha (Gerua) to 7655 kg/ha (Ambikapur), while, CV ranged from 3.67% (Ragolu) to 18.46% (Gerua). Data from Kurumbapet is not included as trial failed and data of several entries were missing as per Monitoring Report. The range of various parameters across the zones is presented in the following table.

Annual Progress Report 2025 Vol. I – Varietal Improvement

In AVT 2, among Fifteen entries tested (11 varietal entries and 4 hybrid entries), 8 varietal (IET 29860, IET 29877, IET 31618, IET 31633, IET 31638, IET 31641, IET 31643 and IET 31659) and one hybrid (IET 31480) entries were recorded required significant yield superiority over the BVC and HC in different zones, respectively (Table ...) and their three years performance is presented in the **table**.

In AVT 1, 25 entries were tested (7 hybrid entries and 16 varietal entries). Among these three varietal (IET 32510, IET 32526 and, IET 32530) and four hybrid (IET 33052 (H), IET 33055 (H), IET 33063 (H), and IET 33071 (H) entries recorded required significant yield superiority over the best checks.

Performance of the entries with required significant yield superiority over checks in AVT 2 &1 IM during *kharif* 2025

* Superior in performance over best varietal check

Superior performance over hybrid check

Three-year performance of the entries: Fifteen entries including 11 varietal and 4 hybrid entries, completed three years of testing and among that nine entries showed required yield advantage over the checks in the final year. Yield performance along with ranks across three years and superiority over HC and BVC in various zones for these entries is given in the following table.

SUMMARY

ADVANCED VARIETY TRIAL- Irrigated Medium (AVT – IM) - Kharif 2025

Locations: 47

Test entries: 47 (43+4)

Checks: National check– NDR 359; Zonal checks-PR 121 (Northern), CR Dhan 300(Eastern and North Eastern), Karma Mahsuri (Central), Akshaya Dhan (Western), Jaya (Southern), Hybrid check- HRI 174 and Local check

List of entries performed superior in AVT 2 - IM based on yield

Zone II: None

Zone III: IET 31480, IET 31633, IET 31638, IET 31643

Zone IV: IET 29877, IET 31480, IET 31618, IET 31638

Zone V: IET 29860, IET 29877, IET 31480, IET 31618, IET 31638, IET 31641, IET 31659

Zone VI: IET 31480

Zone VII: IET 31638

List of entries promoted from AVT 1 - IM to AVT 2 - IM

Zone II: IET 32530

Zone III: IET 32526, IET 32530, IET 33071

Zone IV: None of the entries are promoted

Zone V: IET 32530, IET 33052, IET 33055

Zone VI: IET 32530, IET 33052

Zone VII: IET 32530

INITIAL VARIETY TRIAL - IRRIGATED MEDIUM (IVT-IM)

Locations: 49

Test Entries: 61

Checks: Checks: National - NDR-359; Zonal - PR 121 Table: 6 (Northern), CR Dhan 300 (Eastern and North Eastern), Karma Mahsuri (Central), Akshaya Dhan (Western), Jaya (Southern), and Local check

Initial Variety Trial - Irrigated Medium (IM) was constituted with 61 test entries and 3 checks namely NDR-359 (National); PR 121 (Northern), CR Dhan 300 (Eastern and North Eastern), Karma Mahsuri (Central), Akshaya Dhan (Western), Jaya (Southern), zonal check and local check. The trial was sent to 49 locations however, data was not received from 5 locations namely Gerua (ICAR), Bilaspur, Tirur, Kathalgere, and Ponnampet. Data from Chatha and Kurumbapet is not considered based on monitoring report. Data from four centres were excluded from analysis viz., Kanpur, Prayagraj, Arundhutinagar and Brahmavar due to low experimental mean yield (<4000Kg/ha). Among the centres from which data is included in analysis, location-wise mean grain yield ranged from 3818 kg/ha (Lembucherra) to 6635 kg/ha (Warangal), while, CV ranged from 4.18% (Ragolu) to 19.69% (Lembucherra).

(DNI- Data not included)

In IVT, two varietal entries (IET 33515 and IET 33519) recorded overall significant yield superiority over the best checks. Twenty one entries (IET 33503, IET 33505, IET 33507, IET 33509, IET 33510, IET 33511, IET 33517, IET 33518, IET 33519, IET 33528, IET 33529, IET 33534, IET 33537, IET 33539, IET 33540, IET 33547, IET 33548, IET 33549, IET

Annual Progress Report 2025 Vol. I – Varietal Improvement

33550, IET 33557, IET 33560) entries recorded required significant yield superiority over the national check and their yield performance is presented in the table.

Performance of the entries with required significant yield superiority over checks in IVT IM during *kharif* 2025 and DFF (101-110) days

SUMMARY

INITIAL VARIETY TRIAL - Irrigated Medium (IVT - IM) - Kharif 2025

Locations: 49

Test entries: 61

Checks: NDR-359 (National); PR 121 (Northern), CR Dhan 300(Eastern and North Eastern), Karma Mahsuri (Central), Akshaya Dhan (Western), Jaya (Southern), Zonal check and Local check

List of the entries promoted from IVT (IM) to AVT 1 (IM)

Zone II: None of the entries promoted

Zone III: IET 33503, IET 33507, IET 33518, IET 33519, IET 33528 , IET 33529, IET 33534, IET 33547, IET 33548, IET 33549, IET 33550

Zone IV: IET 33505, IET 33511, IET 33537, IET 33539, IET 33547, IET 33560

Zone V: IET 33519, IET 33539

Zone VI: None of the entries promoted

Zone VII: IET 33517

ADVANCE VARIETY TRIAL 2 & 1 - IRRIGATED LATE (AVT 2 & 1 - Late)

Locations: 44

Test Entries: 9

Checks: Swarna (National), Pusa 44 (Northern), NDR 8002 (Eastern & Central), Ranjeet (North-Eastern), Salivahana (Western), Pushyami (Southern), PA 6444 -HC and Local check **Table: 7**

Advance Variety Trial 2 & 1 - Late (AVT 2 & 1 - L) was constituted with 9 test entries along with checks Swarna (National), Pusa 44 (Northern), NDR 8002 (Eastern & Central), Ranjeet (North-Eastern), Salivahana (Western), Pushyami (Southern), PA 6444 - HC and Local check. The 9 test entries included four entries in the third year of testing and 5 entries in the second year of testing. The trial was sent to 44 locations, data was received from 41 locations and not received from Chiplima, Arundhutinagar and Kathalagere and 34 locations data was considered for analysis. Data from 7 centres were excluded from analysis viz., Nagina, Chinsurah, Bilaspur, Jagadalpur, Brahmavar, Ponnampet and Kurumbapet due to either low (<5%) / high CV (20%) or low experimental yield (<4000Kg/ha) or based on non-significant F Value. Among the centres from which data is included in analysis, location-wise mean grain yield ranged from 4067 kg/ha (Gerua) to 7887 kg/ha (Warangal), while, CV ranged from 3.09% (Ragolu) to 20.43% (Mugad).

	2022	-	7380*#	-	-	-	-	

In late duration trials, there is one hybrid entry (**IET 30882**) which have completed 4 years of testing (2022 to 2025) and three hybrid entries (**IET 31686, IET 31709, IET 31714**) which completed three years of testing (2023-2025).

IET 31686 (PAN 21514) significantly outperformed the best varietal and hybrid check for two years *ie.*, 1st year (6144 kg/ha) and 2nd year (6353 kg/ha) in Zone VI, whereas it showed superiority only for first year (7066) in Zone IV. **Hence it is promising in Zone VI.**

IET 31709 (PAN 21039) significantly outperformed the best varietal and hybrid check in Zone III, Zone V, Zone VI and Zone VII. **Hence it is promising in Zone III, Zone V, Zone VI and Zone VII**

IET 31714 (PHI-23104) showed no significant outperformance over the best varietal and hybrid check in any zone. Hence, ***It is not promising.***

IET 30882 (CRHR 166), a derivative of the cross CRMS 32A / CRL 123-122-21 showed no significant outperformance over the best varietal and hybrid check in any zone. Hence ***It is not promising.***

Entries promoted to third year of testing (from AVT1-Late to AVT2-Late): Two (2)

INITIAL VARIETY TRIAL – LATE (IVT – Late)

Locations: 44

Test Entries: 60

Checks: Swarna (National); Zonal checks - Pusa 44 (Northern), NDR 8002 (Eastern & Central), Ranjeet (North Eastern), Salivahana(Western), Pushyami(Southern); PA6444 (Hybrid check); Local Check(LC)

IVT-Late trial was constituted with 60 test entries along with checks Swarna (National), Pusa 44 (Northern), NDR 8002 (Eastern & Central), Ranjeet (North-Eastern), Salivahana(Western), Pushyami (Southern), PA 6444 -HC and Local check. The trial was sent to 44 locations, data was received from 38 locations and not received from Chiplima, Arundhutinagar, waraseoni, bilaspur Kathalagere and kurumbapet; 31 locations data was considered for analysis. Data from 7 centres were excluded from analysis viz., Nagina, Chinsurah, gerua, Jagadalpur, Nawagam, Ponnampet and Sirsi due to either low (<5%) / high CV (20%) or low experimental yield (<4000Kg/ha) or based on non-significant F Value. Among the centres from which data is included in analysis, location-wise mean grain yield (Kg/ha) ranged from 3738 (NVS) to 6450(ADT), while, CV ranged from 5.2% (BNK) to 24.82 (KRK).

INITIAL VARIETY TRIAL – BORO (IVT - BORO)

Locations: 12

Test Entries: 26

Checks: Gautam (National), IR 64 (Zonal), Rajalaxmi (Hybrid), and Local check

Table: 8a

IVT-Boro trial was constituted with 26 test entries (25 inbreds + 1 hybrid) and four checks including Gautam (National), IR 64 (Zonal), Rajalaxmi (Hybrid), and Local check. The trial was sent in two zones i.e., Zone III (8 locations) and Zone IV (4 locations) and data was received from all the locations. However, the data received from three locations namely Pusa (Bihar) from Zone III and Gerua (Assam) and Lembucherra (Tripura) in Zone VI were not considered for analysis, due to low experimental mean in Lembucherra and low CV in Pusa and Gerua. The data from the remaining nine locations was considered for assessing the performance of test entries. The data pertaining to yield, days to 50% flowering, plant height and panicles/m² are presented in the Tables 9.2, 9.3 respectively. The findings are discussed in the following paragraphs.

Overall

Overall mean grain yield ranged from 3670 kg/ha (IET 33300) to 6809 kg/ha (IET 33304) and days to 50% flowering from 99 (IET 33303) to 123 days (IET 33288). Among checks, national check (Gautam) recorded the highest grain yield of 6504 kg/ha followed by IR64 (6320 kg/ha) Rajalaxmi (HC) 5831 kg/ha, LC (5431 kg/ha) and among the entries IET 33304 recorded highest yield of 6809 kg/ha. Among test entries, none of the entry recorded significant yield advantage over best check; and **hence none were promoted to the next stage of testing.**

Zone III (Eastern)

Data from seven locations (Cuttack, Jeypore, Chiplima, Chinsurah, Pundibhari, Malda and Bankura) was considered for assessing the performance of test entries in Zone III. The grain yield ranged from 3666 (IET 33284) to 7484 kg/ha (IET 33304) and days to 50% flowering ranged from 102 (IET 33303) to 120 days (IET 33286). Among checks, Gautam yielded the highest with 6975 kg/ha followed by IR 64 (6527 kg/ha), Rajalaxmi (HC) 6436 kg/ha and local check (5815 kg/ha). Among the test entries, none of the entry exhibited significant yield superiority over best check; and **hence, not promoted to next level of testing**

Zone IV (North Eastern)

Data was received from four locations and only two locations i.e., Titabar and Arundhutinagar are considered. The grain yield ranged from 1722 (IET 33299) to 6300 kg/ha (IET 33284) and days to 50% flowering from 95 (IET 33298) to 134 days (IET 33288). Among checks, IR64 recorded the highest grain yield (5698 kg/ha) followed by Gautam (4855 kg/ha), local check (4088 kg/ha), and hybrid check (Rajalaxmi (HC) (2200 kg/ha). One entry IET 33284 (6300 kg/ha) showed significant yield superiority over best check (IR64); and **hence, IET 33284 is promoted to the second year of testing.**

List of entries promoted to second year of testing

Overall – None

Zone III (Eastern) – None

Zone IV (North Eastern) - IET 33284

**ADVANCED VARIETAL TRIAL 2 & 1 AND INITIAL VARIETY TRIAL-
IRRIGATED EARLY TRANSPLANTED(AVT 2&1 & IVT-E TP) Rabi 2024-25**

Locations: 18

Test Entries: 3

Checks: CO-51 (National); PR 124 (Northern), Narendra 97 (Eastern), Luit (North Eastern), Sahbhagidhan (Central & Western), MTU 1153 (Southern)- Zonal and local check

Table: 8b

Advanced varietal trial 2 & 1 and Initial variety trial- irrigated early transplanted (AVT 2&1 & IVT-ETP) Rabi 2024-25 was constituted with 31 test entries and 3 checks namely CO-51 (National check); PR 124 (Northern), Narendra 97 (Eastern), Luit (North Eastern), Sahbhagidhan (Central & Western) and MTU 1153 (Southern) as Zonal checks, and a local check. Among the 31 test entries, two entries are in third year of testing and got tested in Zone VII, another five test entries in second year of testing were tested across Zone III. Remaining 24 test entries in first year were tested across Zone III & VII.

The trial AVT 2&1 ETP Rabi was sent to 18 locations and data was received from all locations. However, in zone III, all the locations (5), data was considered for analysis, while in Zone VII, data was not considered for analysis from 4 locations viz., Kampasagar (low CV-3.17 %), Aduthurai (Non-significant F value), Pattambi (Non-significant F value and high CV-40.14%) and Brahmavar (low experimental mean yield of 662 kg/ha).

Among the centres, location-wise mean grain yield ranged from 4205 kg/ha (Maruteru) to 10444 kg/ha (Chiplima), while CV ranged from 4.12% (Warangal) to 13.71% (Jeypore).

Eastern Zone (Zone III)

The trial was evaluated at 5 locations viz., Cuttack, Jeypore and Chiplitima (Odisha), Bankura, Chinsurah (West Bengal) in Eastern Zone. Experimental mean yield at the locations ranged 5123 kg/ha (Cuttack) to 10056 kg/ha (Chiplima), while CV ranged from 6.28% (Bankura) to 13.71% (Jeypore). Overall mean grain yield of the entries ranged from 5082 kg/ha (IET 33326) to 7882 kg/ha (NC-Co-51)

In zone III, **none of the entries** recorded significantly superior yield performance over checks and are not promoted to next level of testing.

Southern Zone (Zone VII)

In Zone VII, data from nine locations viz., Rajendranagar, Warangal, Jagtial, Maruteru, Nellore, Coimbatore, Mandya, Gangavathi and Moncompu were considered for analysis. The mean grain yield of entries ranged from 4205 kg/ha (Maruteru) to 8380 kg/ha (Jagtial), while, CV ranged from 4.12 % (Warangal) to 10.58% (Maruteru). Overall mean grain yield of the entries ranged from 4616 kg/ha (IET 33312) to 7027 kg/ha (ZC-Narendra 97). **None of the entries showed significant yield superiority.** Therefore, **none of the entries** are promoted to next level of testing.

Summary:

In AVT2, AVT1 and IVT, none of the entries recorded significantly superior yield performance over checks and therefore not promoted.

Hybrid Rice

Hybrid rice is a proven technology for increasing rice production and productivity and is playing an important role in increasing the rice production in our country. As a result of concerted efforts over the last three decades, 181 hybrids have been released and notified for commercial cultivation. Among these, 49 hybrids have been developed by the public sector, while the remaining 132 have been developed by the private sector. During the year 2025, hybrid rice was planted in an area of 4.0 m. ha. and more than 80% of the total hybrid rice area is in the states of Uttar Pradesh, Jharkhand, Chhattisgarh, Madhya Pradesh, Odisha and Haryana.

During this year (2025-26), 18 rice hybrids (17-CVRC & 1-SVRC) were released and notified by the Central Sub Committee on Crop standards, Notification & Release of varieties (CSCCSN & RV) for commercial cultivation in different parts of the country. The details of rice hybrids released and notified during 2025-26 are given in Table 1.

Table1: Details of rice hybrids released and notified during 2025-26

For identification of high yielding and widely adaptable hybrids, a national level three-tier system of evaluation is being adopted. In this system, the hybrids developed by constituent funded and voluntary centres of All India Coordinated Research Project on Rice (AICRPR), and those developed by private sector seed companies, having their own R&D are pooled together based on maturity groups in early(<120 days), mid early (121-130 days) and medium (131-140 days) trials. In addition, one more trial is also constituted aiming to develop and evaluate medium slender (MS) grain type hybrids. IHRTs are conducted in approximately 35 or more locations across the country and these trials consist of test hybrids, national varietal/hybrid checks, zonal and local varietal checks in the respective maturity and grain type groups. Private sector companies also participate in the IHRT evaluation.

The location data is considered for analysis, and the hybrids are promoted to the next stage of testing i.e., Advance Varietal Trial-1 (AVT-1) based on criterion mentioned in the proceeding of 56th ARGM (p14-15).

1. The significance of the trial is determined based on F-value. If the F value at individual location is not significant, data from such locations are not considered for assessment of entries.
2. ‘Minimum experimental mean yield of 4 t/ha for inbreds and 5 t/ha for hybrid trial is a requirement for inclusion of location data for assessment of entries.’ However, it has been slightly modified this year to include the yield data up to 4 t/ha for IHRTs as many locations were getting dropped, if 5 t/ha limit is applied.
3. CV for trial acceptance is in the range of 5-20%.
4. CD @ 5% is considered as criterion for promotion of entries.

Details regarding the criteria for promotion of hybrids in AICRIP trials is given in the Proceedings of 51st ARGM (pp 59-60).

The quality data of IHRT’s was not considered for promotion this year, in tune with the promotion criteria adapted for IVT trials.

During Kharif 2025, four hybrid trials were conducted and evaluated, and test locations are given in Table 2 and Table 3 respectively.

Rice Trials conducted Table 2: Details of Initial Hybrid during Kharif 2025

S. No.	Name of the trial	No. of hybrids evaluated		No. of test locations
		Public	Private

1. Initial Hybrid Rice Trial - Early (IHRT-E)

Sixteen test hybrids (ten from private and six from public sector) were evaluated in 33 locations comprising Zone I, II, III, IV, V, VI and VII along with national hybrid check (US 314), national varietal check (CO-51), zonal varietal checks (PR124 - Zone II; NDR97 - Zone III; Luit - Zone IV; Shabhagidhan - Zone V & VI; MTU1153 - Zone VII) and local varietal checks of their respective locations. The details of the composition of the trial are given in Table 4. Besides these, an observational hybrid check viz., DRRH 6 was included in the trial to evaluate its performance vis-à-vis the existing hybrid check US-314 and if found promising to replace the US-314 as national hybrid check.

Table 04: Composition of Initial Hybrid Rice Trial – Early (IHRT-E), Kharif 2025

17	DRRH-6		Observational Check Hybrid
18	US-314		National Check Hybrid
19	CO-51		National Check Variety
20	Zonal Check Variety		Zonal Check Variety
21	Local Check Variety		Local Check Variety

Northern: PR-124; North Eastern: Luit; Eastern: NDR-97; Central and Western: Sahbhagidhan; Southern: MTU-1153

The detailed location wise and zone wise performance for grain yield and days to 50% flowering (DFF) is given in Appendix 1&2 respectively. The overall DFF ranged from 84 to 93 days. The national hybrid check (US-314) had overall mean of 90 days; varietal check (CO-51) of 85 days, zonal check of 87 days, and local check had 88 days. The details of the centres (low performance) whose data is not considered for analysis is given in Appendix 3.

Based on Zonal means, the hybrid CTVA-25104 was found promising in Zone II, Zone III, Zone VI and Zone VII, whereas the hybrid ADVRI-21-0072 was found promising in Zone VI only. Considering this, the two hybrids viz., CTVA-25104 and ADVRI-21-0072 are promoted to AVT-1-E-TP. The promising hybrids identified in IHRT-Early, Kharif 2025 are given in Table-5.

Table 5: Promising hybrids identified in IHRT-E, Kharif 2025

#: denotes superior over Hybrid check; *: denotes superior over best Varietal check

The observational hybrid check DRRH 6 has shown ‘NO’ significant yield superiority over the national hybrid check (US-314) (Table-6) both on overall mean basis as well as zonal mean basis. Hence, it is ‘NOT’ considered to replace US-314 as national hybrid check.

Table 6: Performance of Observational Hybrid Check DRRH-6, over the existing National Hybrid Check US-314 in IHRT-E, Kharif 2025.

2. Initial Hybrid Rice Trial - Mid Early (IHRT-ME)

Mid Early trial comprising of 28 hybrids and four checks viz., Gontra Bidhan-3 (National varietal check); US 312 (National hybrid check); Zonal checks - PR 113 (Zone II); Lalat (Zone III); Karjat-7 (Zone V&VI); MTU 1010 (Zone VII) and respective local checks were conducted at 38 locations. Among the 28 hybrids evaluated, 17 were from private sector and 11 from public sector. The composition of the trial is given in Table 7.

North Zone: PR 113; East Zone: Lalat; West Zone: Karjat-7; South Zone: MTU-1010

Performance of the hybrids with respect to grain yield and days to 50% flowering (DFF) are given in Appendix 4&5 respectively. The details of the centres (low performance) whose data is not considered for analysis is given in Appendix 6.

Performance of promising hybrids identified in different zones is given in Table 8. In the trial, mean DFF of checks ranged from 88-110 days, the hybrid check VNR-2228 had mean DFF of 98 days. The varietal checks viz., national, zonal and local checks had mean DFF of 92, 95 and 95 days respectively.

#: Denotes superior to Hybrid Check; *: Denotes superior to Best Varietal Check.

Based on zonal means, eleven hybrids viz., ADVRH-190553 (Zone II,III, V & VII), TMRH-5513 (Zone II & III), CTVA-25107 (Zone II,III & V) NPH-X-144 (Zone II & V), Rallis-DR-8355, CTVA-25105 and VNR-240, XP-410 (Zone II & V), Rallis-250002 & CTVA-25106 (Zone II), Indam-200-063 (Zone III) were found promising and all these 11 hybrids are promoted to AVT-1-ME.

3. Initial Hybrid Rice Trial - Medium (IHRT-M)

The IHRT-M conducted at 35 locations, with 17 hybrids (public sector - 06; private sector - 11) along with four checks viz., HRI-174 (National hybrid check); NDR-359 (National varietal check); Zonal varietal checks (PR 121 - Zone II; CR Dhan 300 - Zone III&IV); IR-64 - Zone V; Akshayadhan - Zone VI; Jaya - Zone VII) and local checks of their respective locations. The composition of the trial is given in Table 9.

Performance of the hybrids with respect to grain yield and days to 50% flowering (DFF) are given in Appendix 7&8 respectively. The details of the centres (low performance) whose data is not considered for analysis is given in Appendix 9.

Based on the overall mean, three hybrids viz., based on zonal means, six hybrids viz., NK-7013 (RNE 0839) for (Zone II, III & VI), XP-423 (Zone II & III), Indam-200-064 (Zone VI), BRI-22022, NDLRH-557 (Zone IV), LG-90461 (Zone II) were found promising. All these six hybrids are promoted to AVT-1-M (Table 10).

4. Initial Hybrid Rice Trial - Medium Slender (IHRT-MS), Kharif 2024

The trial consisting of eight hybrids (six from public and two from private sector) was conducted at 30 locations. It has four checks viz., national hybrid check (27P63); national varietal checks (BPT 5204 and WGL-14); zonal checks (Improved Samba Mahsuri - Zone III and V; Karjat 6 - Zone VI; Ketekejoha - Zone IV; ADT 49 - Zone VII). The details about the composition of the trial are given in Table 11.

Table 11: Composition of Initial Hybrid Rice Trial - Medium Slender (IHRT-MS), Kharif 2025

S.No.	IET No.	Name	Nominating Agency

ADVANCED VARIETY TRIAL 2 & 1 – AEROBIC (AVT 2 & 1 - Aerob)

Locations: 25

Test Entries: 15

Checks: DRR Dhan 54 & CR Dhan 201 (National); CR Dhan 202 (Northern, Eastern, North Eastern and Central), AAUDR-1 (Western), MAS 946-1 (Southern)- Zonal; DRRH 4 (Hybrid) and local check

Advanced Variety Trial 2 & 1 - Aerobic was constituted with 15 test entries of which, seven varietal and one hybrid entries were tested in third year, while, in second year, 6 varietal and one hybrid entries were evaluated along with 5 checks namely DRR Dhan 54 & CR Dhan 201 (National); Zonal check: CR Dhan 202 (Northern, Eastern, North Eastern and Central), AAUDR-1 (Western), MAS 946-1 (Southern), Hybrid check: DRRH 4 and local check. The trial was sent to 25 locations across II, III, IV, V, VI and VII zones, and the data was not received from one location i.e., Hazaribagh, due to failure of trial. Data from four centres were excluded from analysis viz., Tripura, Jagadalpur, Derol and Parbhani due to either low (<3.5%) / high CV (26%) or low experimental yield (<3500 Kg/ha) or based on non-significant F Value. The range of various parameters across the zones were presented in the following table

Zones	II	III	IV	V	VI	VII
Range : Zonal mean (Kg/ha)	2257 (IET 31768)-5799 (LC)	4031 (ZC)-4643 (IET 31740)	3145 (DD 54 NC) - 4529 (HC)	3080 (IET 32616) - 6469 (HC)	1973 (ZC) - 4840 (IET 31768)	4616 (HC) - 3302 (CRD 201 NC)

Annual Progress Report 2025 Vol. I – Varietal Improvement

In AVT 2, none of the entries recorded required significant yield superiority and their three years performance is presented in the table. In AVT 1, two varietal entries viz., IET 31768 showed significant yield superiority in Zone VI, IET 32654 entry recorded required significant yield superiority in Zone V

Performance of the entries with required significant yield superiority over checks in AVT 2 & 1 Aerob during kharif 2025

INITIAL VARIETY TRIAL – AEROBIC (IVT-Aerobic)**Locations: 26****Test Entries: 60**

Checks: **National: DRR Dhan 54, CR Dhan 201; Zonal: CR Dhan 202 (Northern, Eastern, North Eastern, Central), AAUD R-1 (Western), MAS 946-1 (Southern), and Local Check** **Table: 10**

Initial Variety Trial (IVT) – Aerobic was constituted with 60 test entries and 4 checks namely DRR Dhan 54, CR Dhan 201 (National); CR Dhan 202 – Northern, Eastern, North Eastern, Central (Zonal), AAUD R-1 (Western), MAS 946-1 (Southern), and Local Check. The trial was sent to 26 locations however, data was not received from 2 locations namely Ranchi and Hazaribagh. Data from Nagaland, Pusa, Sabour, Gorakhpur, Arundhutinagar, Jagdalpur, Derol, Vyara were excluded from analysis on the basis of low experimental mean, low CV and/ or non-significant F value. Data from rest of the centers were included in the analysis and is presented in the Table.

SUMMARY

INITIAL VARIETY TRIAL - Aerobic (IVT - Aerobic) - *kharif* 2025

Locations: 26

Test entries: 60

Checks: DRR Dhan 54, CR Dhan 201 (National); CR Dhan 202 – Northern, Eastern, North Eastern, Central (Zonal), AAUDR1 (Western), MAS 946-1 (Southern), and Local Check

List of the entries promoted from IVT to AVT 1

Zone II: IET 33667, IET 33642, IET 33677, IET 33626

Zone III: IET 33626, IET 33642, IET 33628, IET 33667, IET 33651, IET 33644, IET 33652, IET 33633

Zone IV: IET 33675

Zone V: IET 33654, IET 33635, IET 33625, IET 33650, IET 33642, IET 33626

Zone VI: IET 33674, IET 33661, IET 33634, IET 33667, IET 33646, IET 33671, IET 33654, IET 33644, IET 33640, IET 33632

Zone VII: IET 33657, IET 33658, IET 33645, IET 33656, IET 33646

Advance Variety Trial 2 & 1 – Medium Slender (AVT 2 & 1 – MS)**Locations: 40****Test Entries: 09****Table: 11**

Checks: **National Checks (NC): WGL 14 (NC, Medium), BPT 5204 (NC, Late), Telangana Sona (NC, Early)**
Zonal Checks (ZC): Improved Samba Mashuri (Eastern & Central), ADT-49 (Southern), Ketekijoha (North Eastern), Karjat-6 (Western)
Local Check (LC); Hybrid Check (HC): 27P63

AVT 2 & 1 – MS trial is evaluated with 9 test entries along with 6 checks (three NCs, one each of ZC, LC and hybrid check). The trial was sent to 40 locations and data was not received only from Kurumbapet. The data was not considered from 5 locations due to: low experimental yield - Pusa and Gorakhpur; and non-significant values from Ranchi, Masodha and Jabalpur.

Performance of entries on Zonal basis during Kharif 2025

In **Zone III**, IET 33084, a hybrid entry out-yielded (5474 kg/ha) both the hybrid check (HC; 27P63; 5251 kg/ha) and best varietal check (BVC; LC; 5237 kg/ha), **hence promoted based on its yield performance to AVT 2 (MS).**

Annual Progress Report 2025 Vol. I – Varietal Improvement

In **Zone IV**, IET 31494, a third-year hybrid entry (5190 kg/ha) showed better performance than the BVC (ZC; 4533 kg/ha) and HC (4018 kg/ha).

In **Zone V**, no entry exhibited yield advantage over the BVC and HC yield in this zone, hence, none of the entries were promoted based on their yield performance.

In **Zone VI**, IET 32680 out yielded (4956 kg/ha) the BVC (NC; 4570 kg/ha) while, IET 33084, a hybrid entry out-performed BVC (NC; 4570 kg/ha) and HC (4545 kg/ha). **Hence, the two entries were promoted based on their yield performance to AVT 2 (MS).**

In **Zone VII**, no entry exhibited yield advantage over the BVC and HC. Hence, none of the entries were promoted based on their yield performance.

Performance of three years: IET 31494: IVT (2023), AVT 1 (2024) and AVT 2 (2025)

IET 31494 (H) (Shakthi 5455), a hybrid showed yield advantage over the BVC and HC on overall basis during 2023 in IHRT (MS). During 2024 and 2025 it had out-yielded the BVC and HC in Zone IV. The quality of IET 31494 is: HRR – 55.1% (average of 2023, 2024, & 2025); AC – 22.8; GC – 35.0; ASV – 4.0. **Based on its yield performance for the past three years and desirable grain quality, IET 31494 is found promising for Zone IV.**

SUMMARY

ADVANCE VARIETY TRIAL 2&1 Medium Slender (AVT 2&1 - MS)

Locations: 40

Test entries: 9

Checks: National Checks (NC): WGL 14 (NC, Medium), BPT 5204 (NC, Late), Telangana Sona (NC, Early), Zonal Checks (ZC): Improved Samba Mashuri (Eastern & Central), ADT-49 (Southern), Ketekijoha (North Eastern), Karjat-6 (Western), Local Check (LC); Hybrid Check (HC): 27P63

Entries promoted to third year of testing (from AVT 1 - MS to AVT 2 - MS):

Zone II:	None
Zone III:	IET 33084
Zone IV:	None
Zone V:	None
Zone VI	IET 33084, IET 32680
Zone VII	None

INITIAL VARIETY TRIAL – MEDIUM SLENDER (IVT-MS)

Locations: 40

Test Entries: 59

Checks: **National:** Telangana Sona (NC-Early), WGL 14 (NC-Medium), BPT 5204 (NC-Late); **Zonal:** Improved Samba Mahsuri (Eastern and Central), Ketekejoha (North Eastern), Karjat-6 (Western) & ADT49 (Southern) and Local Check. **Table: 12**

Initial Variety Trial - Medium Slender grain (IVT-MS) was constituted with 59 entries and five checks, National (Telangana Sona (Early), WGL 14 (Medium) & BPT 5204 (Late)); Zonal-Improved Samba Mahsuri (Eastern and Central), Ketekejoha (North Eastern), Karjat-6 (Western), ADT49 (Southern) and Local Check. The trial was sent to 40 locations and data was received from 38 locations. Data was not received from Kurumbapet and Karaikal. Data from Gorakhpur and Arundhutinagar was not considered due to low experimental mean while data from Chinsurah, Gerua and Lembucherra was not included due to non-significance of the data.

ADVANCE VARIETY TRIAL 2 & 1 - BIOFORTIFICATION (AVT 2 & 1 - BIOFORT)

Locations: 37

Test Entries: 13

Table: 13

Checks: BPT 5204 (Yield), IR 64 (Yield), DRR Dhan 45 (Yield & Micronutrient) Chittimuthyalu (Micronutrient), DRR Dhan 48 (Yield & Micronutrient).

ATV 1-Biofort trial with 13 entries was conducted along with two yield checks (BPT 5204 and IR 64), Chittimuthyalu as micronutrient check and DRR Dhan 45, and DRR Dhan 48 as yield and micronutrient checks. The biofortification trial was sent to 37 locations and data was received from 33 locations. Data from four locations (Hatwara, Sindewahi, Rudrur and Kurumbapet) was not received. Data from Cuttack, Sirsi and Coimbatore was not considered due to non-significance F value while, from Jeypore, Raipur and Moncompu data was not considered due to low experimental yield (<4000 kg/ha).

The content of micronutrients (Iron and Zinc) in polished rice samples of the test entries was estimated by X-ray fluorescence spectrophotometer (XRF) at IIRR, Hyderabad while protein content was analyzed at NRRI, Cuttack utilizing the seed samples received from test locations. As the XRF values of Zn analyzed at IIRR are 4 ppm lesser than ICP values of zinc, 4 ppm is added uniformly to the Zn content for each of the test entries. Based on the criteria set during 48th ARGM, the entries possessing ≥ 24 ppm Zinc; ≥ 10 ppm protein and ≥ 10 ppm iron in polished rice; and yield on par or more than the best yielding check are eligible for promotion to the next tier of testing. The entries selected (≥ 24.0 ppm Zn, ≥ 10 ppm Fe or 10.0% protein) would then be checked for their yield performance among all the test centers across all the different zones and if found with yield advantage (CD @ 5.0% level of significance) over the best varietal check, they would be considered for promotion i.e., based on ≥ 24.0 ppm Zn, ≥ 10 ppm Fe or 10.0% protein and yield advantage over the BVC.

Performance of entries during Kharif 2025

In **Zone II**, IET 31927, and IET 31938 exhibited significantly higher yield than the duration yield check, BPT 5204.

In **Zone III**, none of the entries exhibited significantly higher yield than the duration yield checks (BPT 5204 or IR 64).

In **Zone IV**, IET 31927 and IET 31961) showed higher yield in comparison to the duration yield check, IR 64.

In **Zone V**, no entry exhibited significantly higher yield than the duration yield check (BPT 5204; IR 64).

In **Zone VI**, IET 31927, IET 31938, IET 32729 and IET 32769 exhibited yield advantage with the yield check, IR 64.

In **Zone VII**, none of the entries showed higher yield in comparison to the duration yield checks (BPT 5204 and IR 64).

Performance of entries in Kharif 2025

Based on yield advantage two entries (IET 32729 and IET 32769) under second year of testing were promoted to AVT 2 in Zone VI. **But, they were not promoted based on Fe & Zn values:** IET 32729 – 1.83 ppm Fe, 20.56 ppm Zn ; IET 32769 – 1.76 ppm Fe , Zn – 20.05

Performance of entries in IVT, AVT 1 and AVT 2:

Among the six entries tested in AVT 2 during Kharif 2025, three entries (IET 31927, IET 31938 and IET 31961) out-yielded their respective checks.

S. No	IET	Years	Z II		Zone IV		Zone VI

		2025	4654	4320			5083	4794

Annual Progress Report 2025 Vol. I – Varietal Improvement

3	31961	2023	-	-	6775	6419	-	-
		2024			5370	4854		
		2025			4708	4138		

IET 31927 (GNV 2076), a selection from IR93337:37-B-15-15-22-IRGA-2RGA-1-B performed better than the BVC in IVT (2023), AVT 1 (2024) and AVT 2 (2025) in three zones (II, IV and VI). Also, based on its yield quality in AVT 1 and AVT 2, it is found promising for Zones II, IV and VI. **The Zn values in ZII, ZIV & ZVI were: 23.0 ppm, 22.1 ppm (one centre), 22.5 ppm; Fe values in all the three zones were less than 2.0 ppm, hence not found promising.**

IET 31938 (GNV 2075), a selection from IR99637-123-1-3-B out-yielded the BVC in IVT (2023), AVT 1 (2024) and AVT 2 (2025) in two zones (II, and VI). Also, based on its yield quality in AVT 1 and AVT 2, it is found promising for Zones II, and VI. **The Zn values in ZII, & ZVI were: 18.8 ppm, & 18.2 ppm; Fe values in all the three zones were less than 2.0 ppm, hence not found promising.**

IET 31961 (CSR H3R 17-42), performed better than the BVC in IVT (2023), AVT 1 (2024) and AVT 2 (2025) in Zone IV. Also, based on its yield quality in AVT 1 and AVT 2, it is found promising for Zone IV. **The Fe and Zn values were recorded as 1.77 ppm and 16.9 ppm respectively, hence not found promising.**

INITIAL VARIETY TRIAL – BIOFORTIFICATION (IVT-BIOFORT)**Locations: 39****Test Entries: 44****Table: 14**

Checks: IR 64 (Yield), DRR Dhan 45 (Yield & Micronutrient), DRR Dhan 48 (Yield & Nutrient Check), Chittimuthyalu (Micronutrient)

IVT-Biofort trial was conducted with 44 entries along with two yield checks (BPT 5204 & IR 64), Chittimuthyalu as micronutrient check, DRR Dhan 45 and DRR Dhan 48 as both yield and micronutrient check. The biofortification trial was sent to 38 locations across six zones (II, III, IV, V, VI and VII) and data was received from 36 locations. Data from two locations (Waraseoni and Puducherry) was not received. Data was not considered due non-significance from Cuttack, Mugad, Pattambi and Aduturai. Low experimental mean yield was observed in Jeypore, Raipur, Nawagam, and Rudrur.

The content of micronutrients (Iron and Zinc) in polished rice samples of the test entries was estimated by X-ray fluorescence spectrophotometer (XRF) at IIRR, Hyderabad while protein content was analysed at NRRI, Cuttack utilizing the seed samples received from test locations. The data on Iron, Zinc and proteins were furnished in tables 14.4 and 14.5. As the XRF values of Zn analysed at IIRR are 4 ppm lesser than ICP values of zinc, 4 ppm is added uniformly to the Zn content for each of the test entries. Based on the criteria set during 48th ARGM, the entries possessing ≥ 24 ppm Zinc; ≥ 10 ppm protein and ≥ 10 ppm iron in polished rice; and yield on par or more than the best yielding check are eligible for promotion to the next tier of testing. The yield performance of entries with ≤ 100 days flowering duration are compared with IR 64 whereas entries with ≥ 100 days are compared with DRR Dhan 48 for identification of best entries. The superior entries on overall mean and zonal basis are discussed below.

Performance of entries during Kharif 2025

The performance of test entries in different zones are described in Table.....Several entries are promoted under each zone based on their yield advantage over the best varietal check.

IET No / Designation / Cross combination	Zonal performance-Yield (kg/ha); Rank						Promoted

Despite several entries being promoted on the basis of grain yield advantage, *only two entries were promoted based on grain and Zinc content and three entries were promoted based on protein content.*

Summary: Entries promoted to AVT 1 based on Zinc content & Grain Yield

Zone	IET Numbers
Z IV	IET 33772
Z VI	IET 33780

Entries promoted to AVT 1 based on Grain Protein content & Grain Yield

Zone	IET Numbers
Z IV	IET 33758, IET 33779, IET 33780

ADVANCE VARIETY TRIAL 2 & 1 and INITIAL VARIETY TRIAL – EARLY (HILLS) [AVT 2 & 1 and IVT - E (H)]

Locations : 16

Test Entries: 25

**Checks : Vivekdhan 86 (NC), Shalimar Rice-3 (ZC)
and Local check (LC)**

Table: 28

Advance Variety Trial – 2 & 1 and Initial Variety Trial - Early (Hills) [AVT 2 & 1 and IVT E (H)] was constituted with 25 test entries and three checks i.e., Vivekdhan 86 (NC), Shalimar Rice-3 (ZC) and local check. Among 25 test entries, three entries were in third year of testing (AVT 2); five entries were in second year of testing (AVT 1) and remaining 17 were in first year of testing (IVT). The trial was sent to 16 locations and data was received from 12 locations. Four locations viz., Wadura, Bandipore, Badarwa and Mediziphema-ICAR did not send the data. The data from four locations was not considered for analysis due to low yield viz., Upper Shillong-Meghalaya (1833 kg/ha), Sundernagar-Himachal Pradesh (1989 kg/ha), Dhaulakaun- Himachal Pradesh (1997 kg/ha) and Palampur - Himachal Pradesh (1880 kg/ha). The data from remaining 12 locations was considered for analysis and interpretation. The overall mean grain yield across altitudes ranged from 2896 kg/ha (IET 33332) to 5582 kg/ha (IET 31381); days to 50% flowering from 95 days (IET 33336) to 113 days (IET 33335); plant height from 81 cm (IET 33342) to 118 cm (IET 33348); and number of panicles/m² from 266 (IET 33335) to 349 (IET 31389). **On over all mean basis, none of the entries showed required grain yield superiority against best check.** The data pertaining to grain yield, days to 50% flowering, plant height and panicles/m² are presented in Tables 23.2 and 23.3.

The performance of test entries at different elevations is described below:

Low Northern Elevation

In this elevation, one location Malan (Himachal Pradesh) has conducted and considered for analysis. Mean grain yield ranged from 1333 kg/ha (IET 33343 and IET 33346) to 5333 kg/ha (IET 33342), while, days to 50% flowering from 70 days (IET 33346) to 111 days (IET 33338). Plant height ranged from 75 cm (IET 33342) to 110 cm (IET 33347 and IET 333487) and number of panicles/m² from 158 (IET 33347) to 282 (Local check). Among the checks, local check recorded maximum grain yield (4400 kg/ha with 87 days to 50% flowering) followed by Zonal check, Shalimar Rice-3 (2600 kg/ha with 77 days to 50% flowering). **Among the test entries, two entries viz., IETs 33342 and 31386 recorded significant yield advantage against the best check (LC), hence IET 33342 is promoted to second year of testing. IET 31386 completed 3 years of testing and hence, discussed separately.**

Performance of superior test entries at Low Northern Elevation in AVT 1 & IVT E - (H) during Kharif 2025

IET No. / Designation / Cross Combination	Grain Yield (Kg/ha) Days to 50% Flowering Grain type
IET 33342	5333
SKUA-610	89
Shalimar Sugandh-1 x SKUA 540	-
IET 31386	4933
VL 32934	89

VL Dhan 87 / VL 31743	LS
Vivekdhan 86 (NC)	2333 81
Shalimar Rice- 3 (ZC)	2600 77
Local check (LC)	4400 87
CD	489

Low Southern Elevation

In this elevation, one location Ponnampet (Karnataka) has conducted and considered for analysis. Mean grain yield ranged from 1270 kg/ha (IET 33332) to 4395 kg/ha (IET 33336), while, days to 50% flowering from 84 days (IET 32325) to 102 days (Local check-Tunga). Plant height ranged from 66 cm (IET 31386) to 104 cm (Local check-Tunga) and number of panicles/m² from 240 (IET 33335) to 388 (IET 33337). Among the checks, Zonal check (Shalimar Rice 3) recorded maximum grain yield (4048 kg/ha with 96 days to 50% flowering) followed by National check, VL Dhan 86 (3710 kg/ha with 893 days to 50% flowering). **Among the test entries, none of the entries exhibited significantly better yield than best check and hence none are promoted in Low southern elevation.**

Medium Northern Elevation

In this elevation, the trial AVT 2&1 and IVT E (H) was conducted at three locations viz., Rajouri and Almora. Mean grain yield ranged from 2638 kg/ha (IET 33344) to 5194 kg/ha (IET 31389), while, days to 50% flowering from 92 days (IET 33337) to 119 days (IET 33335). Plant height ranged from 96 cm (IET 33342) to 131 cm (National check VL Dhan 86) and number of panicles/m² from 219 (IET 33336) to 412 (IET 32317). Among the checks, National check VL Dhan 86 recorded maximum grain yield (3928 kg/ha with 99 days to 50% flowering) followed by Local check (3876 kg/ha with 95 days to 50% flowering). **Among the test entries, six entries viz., IETs 31381, 31386, 31389, 32326, 32317 and 33347 recorded significant yield advantage against the best check (NC). IETs 32326 and 32317 have been promoted to third year of testing and IET 33347 is promoted to second year of testing in Medium Northern elevation. IETs 31381, 31386 and 31389 are in third year of testing and discussed separately.**

Performance of superior test entries at Medium Northern Elevation in AVT 1& IVT E - (H) during Kharif 2025

IET No. / Designation / Cross Combination	Grain Yield (Kg/ha) Days to 50% Flowering Grain type

Medium Southern Elevation

In this elevation, one location Gudalur (TN) has conducted the trial and was considered for analysis. Mean grain yield ranged from 3077 kg/ha (IET 33333) to 8538 kg/ha (IET 32333), while, days to 50% flowering from 80 days (IETs 33346) to 103 days (Local check). Plant height ranged from 68 cm (IET 33342) to 120 cm (IET 31381 and Shalimar Rice 3, ZC) and number of panicles/m² from 291 (IET 33348) to 534 (IET 33333). Among the checks, National check, VL Dhan 86 recorded maximum grain yield (6077 kg/ha with 87 days to 50% flowering) followed by Local check (5038 kg/ha with 103 days to 50% flowering). **Among the test entries, four entries viz., IETs 32373, 32317, 33340 and 32325 recorded significant yield superiority against the best check (NC). Hence IETs 32373, 32317 and 32325 have been promoted to third year of testing in Medium Southern Elevation; and IET 33340 is promoted to second year of testing.**

Performance of superior test entries at Medium Southern Elevation in AVT 1& IVT - E (H) during Kharif 2025

High Elevation

At high elevation, the trial AVT 2 & 1 and IVT E (H) was conducted at three locations viz., Khudwani, Pombay and Larnoo. Mean grain yield ranged from 2945 kg/ha (IET 33340) to 7871 kg/ha (IET 33341), while, days to 50% flowering from 104 days (IET 32325 and Shalimar Rice - 3) to 122 days (IET 33335). Plant height ranged from 77 cm (IET 32317) to 126 cm (IET 33348) and number of panicles/m² from 187 (IET 33340) to 385 (IET 33341). Among the checks, local check recorded maximum grain yield (7161 kg/ha with 106 days to 50% flowering) followed by zonal check, Shalimar Rice-3 (6432 kg/ha with 104 days to 50% flowering). **Among the test entries, only one entry viz., IET 33341 recorded significant yield superiority against the best check (LC). Hence, IET 33341 has been promoted to second year of testing in High Elevation.**

IET 31381 (VL 32945) derived from the cross VL Dhan 87 / VL 32063 showed yield superiority in the year 2023 over best check in Medium northern hills (Uttarkhand and Himachal Pradesh). During 2024, it also showed yield superiority over best check in medium northern zone in the state of Uttarkhand. The entry showed better performance than the best check in Medium Northern hills (Uttarkhand) during 2025. Overall, the entry perform well in medium northern zone particularly in Uttarkhand state for three years of testing. **Therefore, the entry IET 31381 is promising in Uttarkhand State under Medium Northern Hills.**

IET 31386 (VL 32934) derived from the cross VL Dhan 87 / VL 31743 showed yield superiority in the year 2023 over best check in Medium northern hills (Uttarkhand) and under medium southern (Tamil Nadu). During 2024, it also showed yield superiority over best check under medium northern zone in Uttarkhand. The entry showed better performance than the best check in Medium Northern hills (Uttarkhand) and Low Northern zone (Himachal Pradesh) during 2025. Overall, the entry perform well in medium northern zone particularly in Uttarkhand state for three years of testing. **Therefore, the entry IET 31386 is promising in Uttarkhand State under Medium Northern Hills.**

IET 31389 (VL 32933) derived from the cross VL Dhan 87 / VL 31743 showed yield superiority in the year 2023 over best check in Medium northern hills (Uttarkhand). During 2024, it also showed yield superiority over best check under medium northern zone in the state of Uttarkhand. It has shown better performance than the best check in Low southern hill zone. The entry showed better performance than the best check in Medium Northern hills (Uttarkhand) during 2025. Overall, the entry perform well in medium northern zone particularly in Uttarkhand state for three years of testing. **Therefore, the entry IET 31389 is promising in Uttarkhand State under Medium Northern Hills.**

List of test entries promoted to AVT 2 E - (H) and AVT 1 E - (H) is mentioned below:

Elevation	Entries promoted to AVT-2 E(H)	Entries promoted to AVT 1 E(H)
Low Northern		IET 33342
Medium Northern	IETs 32326 and 32317	IET 33347
Medium Southern	IETs 32373, 32317 and 32325	IET 33340

**ADVANCE VARIETY TRIAL 2 & 1 & INITIAL VARIETY TRIAL (IVT)
- MEDIUM (HILLS) [AVT 2 & 1 & IVT - M (H)]**

Locations: 17

Test Entries: 31

Checks: Vivekdhan 62 (NC), VL Dhan 68 (ZC for North & South), RC Maniphou-11 (ZC for North East) and Local check (LC)

Table: 29

AVT 2, 1 and IVT – M (H) trial was constituted with 31 entries including 28 test entries, 3 checks – Vivekdhan 62 (NC), VL Dhan 68 (ZC for North and South) and RC Maniphou-11 (North East), a Local Check. Out of 28 test entries, one entries (IET 31413) was in third year of testing; 9 entries (IET 32350, IET 32340, IET 32354, IET 32356, IET 32343, IET 32347, IET 32344, IET 32351 and IET 32349) were in second year of testing while 18 were in first year of testing. The trial was sent to 17 locations of various altitudes and data was received from 15 locations and remaining two locations viz., Badarwa and Pombay did not conduct the trial.

Further, 3 locations data were not considered for analysis due to low grain yield, low and high CV ((Barapani Umiam -ICAR, Wangbal and Gangtok). The data from remaining 14 locations (Khudwani, Wadura, Sundernagar, Malan, CAU-Imphal, Lamphelpat-ICAR, Wangbal, Sirsi, Rajouri, Almora-ICAR, Gudaluru, Upper Shilong. CAU Barapani, Umiam Barapani ICAR) was considered for analysis and inferences were drawn. Overall, grain mean yield ranged from 3063 kg/ha (NC) to 5592 kg/ha (IET 32340) and average yield was 4209 kg/ha; days to 50% flowering from 83 days (IET 33359) to 114 days (IET 33358); plant height from 96 cm (IET 31413& 33354) to 127 (NC) and number of panicles/m² from 240 (ZC) to 336 (IET 31413). **On overall mean grain yield, two entries namely, IET 32340, and IET 31413 outperformed the best check local check (LC).** The data pertaining to yield, flowering, plant height and panicles/m² and quality were presented in tables 24.2 and 24.3. Performance of the test entries at different elevations was discussed below.

High Altitude (951-1500 SL)

AVT 2 & 1 and IVT – M (H) trial was sent to 5 locations Viz., Khudwani, Pombay, Wadura, Badarwa and Upper Shillong under high altitude region, but the data from Pombay and Badarwa was not received. Hence data from Khudwani, Wadura and Upper Shillong was used for analysis.

The mean grain yield at high altitude northern was 5670 kg/ha and it ranged from 1617 kg/ha (IET 33358) to 8487 kg/ha (IET 32340); days to 50% flowering varied between 93 days (IET 33359) to 138 days (IET 33355); Plant height varied from 80 cm (IET 32349) to 125 cm (Vivekdhan 62 [NC]); number of panicles ranged from 133 (ZC) to 366 (IET 32340). Among the test entries, two test entries viz., IET 32340, and IET 31413 recorded significant yield advantage over best check (local check). One entry in AVT 2, IET 31413 recorded significant yield advantage over best check (local check). Hence one entry IET 32340 **may be promoted to AVT 2 M (H) for final year of testing under high altitude region.** None of the entries in IVT was showed significant yield advantage over the best check.

Performance of superior test entries at High Altitude in AVT 1 & 2 - M (H) during Kharif 2025

IET No. / Designation / Cross Combination	Grain Yield (Kg/ha) Days to 50% Flowering Grain type
IET 32340 NLCJ-4 (NLCJ-1410-131) Tripura Nirog x Naveen	8487 105 LS
IET 31413 VL 32935 VL Dhan 87 / VL 31743	7851 112 LS
Vivekdhan 62 (NC)	3025 120
ZC	2019 126
LC	6851 106

Low Altitude Northern (≤ 950 MSL)

AVT 2,1 and IVT-M (H) trial was sent to seven locations and all the seven locations conducted the trial and sent the data. The data from Wangbal and Barapani Umiam-ICAR, not considered for analysis due to low CV (1.12%) and low mean yield (**2052** kg/ha) respectively. The data from remaining five locations viz., Sundernagar, Malan, CAU Imphal, Lamphelpat-ICAR, and CAU Barapani was considered for analysis. The mean grain yield of the entries ranged from 2634 kg/ha (IET 33366) to 5816 kg/ha (IET 32343); days to 50% flowering varied from 74 days (IET 33359) to 113 days (IET 33355); Plant height varied from 103 cm (IET 32354) to 134 cm (IET 33364); number of panicles ranged from 212 (IET 33359) to 311 (IET 31413). Among the checks, Local check recorded highest grain yield of 4611 kg/ha.

Among the test entries, seven test entries viz., IET 32343, IET 32354, IET 33360, IET 33350, IET 32340, IET 33354 and IET 32344 recorded significant yield advantage over best check Local check (LC). None of the entries in AVT2 was showed significant yield advantage over the best check and Four entries from AVT1 and three entries from IVT showed significant yield advantage over the best check.

Hence IETs 32340, 32354, 32343 and 32344 may be promoted to AVT 2 M (H) for final year of testing and IETs 33350, 33354 and 33360 may be promoted to AVT 1 M (H) for second year of testing under Low Altitude Northern region.

Performance of superior test entries at Low Altitude Northern in AVT 1 & IVT - M (H) during Kharif 2025.

IET No. / Designation / Cross Combination	Grain Yield (Kg/ha) Days to 50% Flowering Grain type
IET 32340 NLCJ-4 (NLCJ-1410-131) Tripura Nirog x Naveen	5408 107 LS
IET 32354 RCPL 1-462 RCPL 1-71/Shahsarang	5724 104
IET 32343 NLCJ-2 (NLCJ-1413-189) Hokuchuk2 x Tripura Nirog	5816 105 LS

Vivekdhan 62 (NC)	2761 97
ZC	4204 104
LC	4611 101

Low Altitude Southern (≤ 950 MSL)

The trial was sent to only one location Viz., Sirsi under low altitude southern region. Among the test entries, seven test entries recorded significant yield advantage over best check Local check (LC). None of the entries in AVT2 was showed significant yield advantage over the best check and one entry (IET 32349) from AVT1 and six entries (IETs 33361, 33358, 33363, 33355, 33354 and 33366) from IVT showed significant yield advantage over the best check.

Hence, IET 32349 may be promoted to AVT 2 M (H) for third year of testing and IETs 33361, 33358, 33363, 33355, 33354 and 33366 promoted to AVT 1 M (H) for second year of testing under Low Altitude Southern region.

Performance of superior test entries at Low Altitude Southern in AVT 1 & IVT - M (H) during Kharif 2025

Medium Altitude Northern (951-1500 MSL)

AVT 2 & 1 and IVT M (H) trial was sent to 3 locations viz., Rajouri, Almora and Gangtok and data was received from all 3 locations. The data from Gangtok (2181 kg/ha) showed low experimental yield, and hence not considered for analysis. The data from remaining two locations viz., Rajouri and Almora was considered for analysis. The mean grain yield at medium altitude northern was 3665 kg/ha and ranged from 2102 kg/ha (IET 33366) to 4884 kg/ha (IET 32350); and days to 50% flowering varied between 90 days (IET 33359) and 114 days (IET 33357). Among the checks, national check (NC) recorded highest grain yield of 3942 kg/ha with 100 days to 50% flowering.

Five test entries namely, IET 31413, IET 32350, IET 32340, 33350 and IET 33360 out yielded the best check (local check), One entry, IET 31413 in AVT 2 was showed significant yield advantage over the best check. Two entries IET 32350 and IET 32340 was showed significant yield advantage over the best check in AVT 1. Hence IET 32350 and IET 32340 promoted to AVT 2 M (H) for final year of testing under Medium Altitude Northern region. Two entries namely, IET 33350 and IET 33360, in IVT were showed significant yield

advantage over the best check. Hence the entries, IET 33350 and IET 33360, may be promoted to AVT 1 M (H) for second year of testing under Medium Altitude Northern region.

Performance of superior test entries at Medium Altitude Northern in AVT 2 & 1 and IVT - M (H) during Kharif 2025

IET No. / Designation / Cross Combination	Grain Yield (Kg/ha) Days to 50% Flowering Grain type

LC	3671 103

Medium Altitude Southern (951-1500 MSL)

AVT 2 & 1 and IVT - M (H) trial was sent to only one location viz., Gudaluru in Tamil Nadu. The mean grain yield at medium altitude southern was 5001 kg/ha and ranged from 1538 kg/ha (IET 32356) to 7769 kg/ha (IET 32344); and days to 50% flowering varied between 84 days (IETs 33362 and 33363) to 110 days (LC). Among the checks, local check recorded highest grain yield of 5623 kg/ha with 110 days to 50% flowering. Eight test entries out yielded the best check (local check), One entry, IET 31413 in AVT2 showed significant yield advantage over the best check. Three entries IET 32344, IET 32351 and IET 32349 showed significant yield advantage over the best check in AVT 1. Hence, IET 32344 IET 32351 and IET 32349 promoted to AVT 2 M (H) for final year of testing under Medium Altitude Northern region. Four entries namely, IET 33349, IET33357, IET 33358 and IET 33361 in IVT were showed significant yield advantage over the best check. Hence, the entries, IET 33349, IET33357, IET 33358 and IET 33361, may be promoted to AVT 1 M (H) for second year of testing under Medium Southern altitude.

Three year's performance of entry IET 31413

IET No. / Designation / Cross Combination	Year	% Yield Advantage over BVC							
		Low Hills Northern		Medium Hills Northern		Medium Southern		High Hills	
		Zone	State	Zone	State	Zone	State	Zone	State
IET 31413 VL 32935 VL Dhan 87 / VL 31743	2023	-	-	Medium Northern	-	-	-		
	2024	Low Northern	-	Medium Northern	UK	-	-		
	2025	-	-	Medium Northern	UK	Medium Southern	TN	High Hills	J&K Meghalaya

IET 31413 (VL 32935) derived from the cross VL Dhan 87 / VL 31743 showed yield superiority over best check in **Medium Hills Northern** during 2023. The entry has shown better performance than best check in Medium northern hills (Uttarkhand) and lower hills of Northern during 2024. The entry showed better performance than the best check in Medium northern hills (Uttarkhand), Medium Southern (Tamil Nadu) and High Hills (Jammu and Kashmir and Meghalaya) during 2024. The entry did perform well in Uttarkhand state for at least two years of testing. **Therefore, the entry IET 31413 is promising in Uttarkhand State only in Medium Hills Northern.**

INITIAL VARIETY TRIAL UPLAND (HILLS) IVT - U (H) - Kharif 2025

Locations: 12

Test entries: 10+3

Checks: Sukaradhan1 (NC); VL Dhan158 (ZC for North & South); Table: 30

Bhalum 1 (ZC for North East) and Local check (LC)

Initial variety trial Upper (Hills) [IVT – U(H)] trial was constituted with 13 entries including 10 test entries and 3 checks, Sukaradhan 1 (NC); VL Dhan 158 (ZC for North & South); Bhalum -1 (ZC for North East) and Local check. The trial was sent to 12 locations and data was received from only nine locations. The data from Lamphelpat- ICAR (LMP), Upper shillong (USG) and Bhertin (BTN) was not received, as trial at these locations reported as failed. The data from Wangbal (WBL) and Dhaulakaun (DLK) received, but data from these locations are not considered for analysis due to low CV (1.68) and low F value (1.78 ns) respectively. Remaining seven locations were considered for the analysis under two elevations namely Low elevation (Low Northern) and Medium elevation (Medium Northern). Overall, mean grain yield ranged from 1645 kg/ha (IET 33376) to 3173 kg/ha (IET 33369); days to 50% flowering ranged from 85 days (Sukaradhan-1(NC) & IET 33370) to 97 days (IET 33367). Similarly, plant height ranged from 98 cm (IET 33375) to 112 cm (IET 33367), and panicles/m² ranged from 159 (IET 33375) to 232 (IET 33372).

On over all mean basis, the test entries, IET 33369, IET 33368 and IET 33367 recorded significant yield advantage over the best check (LC), hence they are promoted. The data pertaining to grain yield, days to 50% flowering, plant height and panicles/m² are presented in tables 25.2 and 25.3.

The performance of test entries at different elevations is described below.

Overall Performance of promising entries in Initial variety Trial - Upper (Hills), Kharif 2025

Rank	IET No. designation/Cross combination	Grain yield (kg/ha) Days to 50% flow	% Yield superiority over NC/ZC/LC
1	IET 33369	3173 96	77.8 54.0 46.4
2	IET 33368	2828 94	58.5 37.2 30.5
3	IET 33367	2826 97	58.4 37.1 30.4
	Sukardhan 1 (NC)	1784	
	Zonal check (ZC)	2060	
	Local check (LC)	2166	

Low Altitude Northern Hills

In IVT U (H) at low altitude trial, data from 5 locations viz., Malan, Sundernagar, Barapani (Umiam), CAU-Barpani, CAU Imphal, was considered for analysis. Mean grain yield of the entries ranged from 1964 kg/ha (Sukaradhan-1(NC)) to 3816 kg/ha (IET 33369). Days to 50% flowering ranged from 83 days (Sukaradhan-1(NC)) to 97 days (IET 33369 & IET 33367). Similarly, plant height ranged from 97 cm (Local Check) to 113 cm (IET 33369), and panicles/m² ranged from 177 (IET 33374) to 263 (IET 33372). **Among test entries, IET 33369, IET 33368 and IET 33367 recorded significant yield advantage over the best check (LC), hence they are promoted to the next year of testing.**

Performance of promising entries at Low northern hills in Initial variety Trial - Upper (Hills), Kharif 2025

Rank	IET No. designation/Cross combination	Grain yield (kg/ha) Days to 50% flow	% Yield superiority over NC/ZC/LC
1	IET 33369	3816 97	94.2 65.9 61.2
2	IET 33368	3339 93	70.01 45.2 41.12
3	IET 33367	3269 97	66.4 42.1 38.1
	Sukaradhan 1 (NC)	1964	
	Zonal check (ZC)	2299	
	Local check (LC)	2366	

Medium Altitude Northern Hills

In IVT U (H) at medium altitude trial, data from two locations viz., Almora and Bageswar was considered for analysis. Mean grain yield of the entries ranged from 818 Kg/ha (IET 33376) to 2052 kg/ha (IET 33371). Days to 50% flowering ranged from 86 days (IET 33370) to 98 days (IET 33367). Similarly, plant height ranged from 98 cm (IET 33376) to 115 cm (Local Check), and panicles/m² ranged from 86 (IET 33376) to 200 (IET 33368). **Among test entries, no entry recorded significant yield advantage over the best check (LC), hence, none were promoted.**

SUMMARY

INITIAL VARIETY TRIAL - U (H) Kharif 2025

Locations: 12

Test entries: 10

Checks: Sukardhan1 (NC); VL Dhan 158 (ZC for North & South); Bhalum -1 (ZC for North East); Local check

IVT-U (H) The trial comprised of 10 test entries and three checks are tested in 12 locations.

List of the entries promoted in IVT - U (H)

Overall: IET 33369, IET 33368 and IET 33367

Low altitude Northern Hills: IET 33369, IET 33368 and IET 33367

Medium altitude Northern Hills: None of the entries promoted

ADVANCE VARIETY TRIAL 2 & 1 & INITIAL VARIETY TRIAL - JAPONICA [AVT 2 & 1 & IVT - J]

Locations : 9

Test Entries: 4

Checks : Bhrigudhan, Varundhan, Shalimar Rice-5 and local check

Table: 31

Advance Variety Trial 2 & 1 & Initial Variety Trial - Japonica [AVT 2 & 1 & IVT - J] was constituted with four test entries and four checks viz., Bhrigudhan, Varundhan, Shalimar Rice-5 and a local check (LC). Among 4 test entries (IET 31431, 32371, 33377 and 33378) one entry was in third year of testing (AVT 2 i.e., 31431) and another one entry was in second year of testing (AVT 1 i.e., 32371) and remaining two entries were in first year of testing (IVT i.e., 33377, 33378). The trial was sent to 9 locations in three zones (Zone I, III and IV) and data was received from six locations viz., Malan, Khudwani, Larnoo, Pundibari, Pombay and Gerua. The trial was not conducted at one centre i.e., Malda and experiment failed at Lembuchera and Titabar; and data from two locations i.e., Pundibhari and Gerua were not considered for analysis due low experimental mean yield and data from four locations was analysed.

Experimental mean yield at the locations varied from 1033 kg/ha at Gerua to 6498 kg/ha at Khudwani and CV ranged from 5.12 % at Punibhari to 13.23 % at Malan. In Zone I all four locations i.e., Khudwani, Larnoo, Pombay and Malan were considered for analysis and in other zones Zone III (Pundibhari, Malda) and Zone IV (Titabar, Gerua, Lembucherra) locations data was not considered for analysis or experiment was failed or not conducted. Hence, across Zone I, among the checks Bhrigudhan (5450 kg/ha with 99 days to 50% flowering) ranked first followed by local check (5018 kg/ha with 88 days to 50% flowering), Varundhan (4662 kg/ha with 106 days to 50% flowering) and Shalimar Rice-5 (4449 kg/ha with 87 days to 50% flowering). None of the entries from AVT 2, AVT 1 and IVT showed significant yield advantage over the best check across Zone I and as in other zones, zone III and Zone IV, none of the entries were promoted. **On overall basis, none of the entries were promoted in AVT 2 & 1 & IVT - Japonica 2025 trial.**

The entry IET 31431 completed three years of testing

Three years performance of the entry in Japonica trial

IET No.	Years	Zone I (kg/ha)	Remarks
31431	2023	6824	Promoted in Z-I
	2024	5851	Promoted in Z-I
	2025	5214	Not promising

ADVANCE VARIETY TRIAL 2 & 1 - ALKALINE AND INLAND SALINE TOLERANT VARIETY TRIAL (AVT 2 & 1 - AL & ISTVT)

Locations: 20

Test Entries: 11

Checks: CSR 36 (Alkaline check), CSR 10 (Early duration saline check), FL 478 (Saline Tolerant check), CSR 23 (Inland Saline check), Pusa 44 (Sensitive check), PR 127 (Observational Sensitive Check) and Local check

Table: 15

AVT 2 &1- AL & ISTVT constituted with 18 entries including 7 checks and 11 test entries. The trial sent to 20 locations and data was received from 18 locations except Jind (Karnal) and Kurumbapet (Puducherry). Among the 11 test entries evaluated, 2 entries are promoted from AVT1 AL & ISTVT are in the 3rd year of testing, 9 entries are promoted from IVT AL & ISTVT and are in the second year of testing. The analyzed data pertaining to yield, days to 50% flowering, plant height, panicles/m² and quality presented in tables 15.1-15.4. Inclusion of locations in the final analysis is based on monitoring tour reports and location wise general information about stress level of EC and pH, CV%, yield range and mean yield as presented in tabular form.

General information about soil stress parameters and yield performance of entries under alkalinity and inland salinity in AVT 2 &1 AL & ISTVT, Kharif, 2025

Location/State	Soil pH	Soil EC (dSm ⁻¹)	Exptl mean (kg/ha)	Grain Yield Range (Kg/ha)	CV %	Remarks
Alkalinity						
Zone-II						
Karnal (Haryana) (Sodic microplots)	9.7	1.5	3856	1852 - 5019	21.4	Data considered for identification of tolerant genotypes
Kurukshetra (Haryana)	9.3	0.9	3945	1847-5120	14.5	Data considered for analysis
Anjanteli	9.7	1.2	3993	1973-5153	16.7	Data considered for analysis
Kanpur (Uttar Pradesh)	9.8	0.2	3549	1981-6573	13.4	Data considered for analysis
Zone-III						
Gautam B. Nagar (UP)	9.6	1.5	3786	1527-5380	15.3	Data considered for analysis
Masodha (UP)	9.1	3.1	3941	2332-5224	11.3	Data considered for analysis
Lucknow	9.2-9.5	0.7-0.9	1427	292- 2792	49.7	Low exptl mean (<2000kg/ha), high CV and very high stress level. Data not considered.
Zone-VI						
Nawagam	8.1	0.43	3813	1813-4570	10.0	Sensitive and tolerant checks on par yield. Data not considered.
Zone-VII						
Kampasagar (Telangana)	8.5	2.4	5735	3699 -7073	6.9	Data considered for analysis
Karaikal (Puducherry)	8.6	1.7	4100	3222-4844	10.5	Data considered for analysis
Annamalainagar (Tamil Nadu)	8.8	1.7	3232	2227-3638	5.34	Local check: BPT 5204 is sensitive & highest yielding followed by Pusa 44. Data not considered.
Trichy	8.8	2.4	2474	038-6803	48.4	High CV. Data not considered.
Inland Saline						
Zone-II						
Karnal (Inland Saline)	7.5	9.5	3815	2074-5222	20.9	Data considered for

Location/State	Soil pH	Soil EC (dSm ⁻¹)	Exptl mean (kg/ha)	Grain Yield Range (Kg/ha)	CV %	Remarks
microplot)						identification of tolerant genotypes
Rohtak (Karnal)	7.7	9.2	3974	1893-5033	11.5	Data considered for analysis
Panipat (Haryana)	7.7	9.2	4069	2027-5167	12.1	Data considered for analysis
Zone-VI						
Danti (Navsari)	8.7	6.2	2217	776-3283	17.6	Data considered for analysis
Zone-VII						
Gangavati (Karnataka)	8.3	7.8	3540	2634-4633	9.7	Data considered for analysis
Mugad	5.7	7.1	4619	4325-5342	7.4	Data considered for analysis
Vytilla (Kerala)	4.96	5.0	4062	833-7667	13.5	Data considered for analysis

In microplot evaluation under controlled stress conditions at ICAR-CSSRI, Karnal, the IETs. 31862, 31858, 32778, 32788, 32776 and 32792 possessed dual tolerance for sodicity and inland salinity with a tolerance score of 3.0 - 4.0 as compared to tolerant and sensitive checks, which scored SES scores of 5-7 and 7-8 respectively. IETs 32787 & 32783 found promising for alkaline conditions with SES score of 4 -5 as compared to tolerant and sensitive checks.

Performance of entries under alkaline conditions during Kharif, 2025

Under alkaline conditions, data received from 12 locations including sodic microplot screening. The data from seven locations only found suitable for inclusion in the final analysis from zone-II, Zone-III and Zone-VII. Under alkaline conditions indicated that experimental mean across zones varied from 3549 kg/ha (Kanpur) to 5735 kg/ha (Kampasagar) (Table: 15.5). The CV% varied from 6.9% (Kampasagar) to 16.68% (Anjanteli). Days to 50% flowering varied from 65 days (IET 32785) in Zone-II to 111 days (IET32791). PR 127 is the shortest with 66 cm height (Z-II), while IET32780 is the tallest culture with 117 cm height (Zone-VII). ***Among the test entries, IET 32776 and IET 32792 in Zone-II; 32788 and IET 32783 in Zone-III recorded the required significant yield superiority over best check (Table 3) and are promoted under alkaline conditions to 3rd year testing in AVT2-AL & ISTVT.***

Performance of Entries under Inland Saline Conditions during Kharif, 2025

Under inland saline conditions, trial was sent to seven locations in Zone-II, Zone-VI and Zone-VII. The data received from all the seven locations found suitable for inclusion in the final analysis. The experimental mean across zones varied from 2217kg/ha (Navsari) to 4619 kg/ha (Mugad) (Table:15.6). The CV% varied from 7.4% (Mugad) to 17.65% (Navsari). Days to 50% flowering varied from 75 days (CSR 23) in Zone-II to 120 days (CSR 36). CSR 10 is the shortest with 59 cm height (Z-II), while local check is the tallest culture with 140 cm height (Zone-VI).

Table 15.6: Zone-wise Information under Inland Saline Conditions during Kharif, 2025

Locations considered	2	1	3

Among the test entries under inland saline conditions, IET 31862 and IET 31858 which are in the final year of testing recorded significant yield superiority over best check in Zone-II. Among the entries in the AVT1 AL & ISTVT (Table 15.7), ***IET nos. 32788, 32783, 32776, 32792 and 32778 in Zone-II; IET Nos. 32778, 32780 and 32785 in Zone-VII exhibited required yield advantage over best check; are promoted under inland saline conditions to AVT2-AL & ISTVT.***

Summary

AVT2- AL & ISTVT

Two entries IET Nos. 31862 and 31858 tested in four zones (Z- II, III, VI & VII) and completed three years of testing.

Alkaline conditions: Zone – II & III: IET Nos. 31862 and 31858

Inland saline conditions: Zone – VI: IET Nos. 31862 and 31858

**INITIAL VARIETY TRIAL - ALKALINE AND INLAND SALINE TOLERANT
VARIETY TRIAL (IVT - AL & ISTVT)**

Locations: 18

Test Entries: 21

Checks: CSR 36 (Alkaline check), CSR 10 (Early duration saline check), FL 478 (Saline Tolerant check), CSR 23 (Inland Saline check), Pusa 44 (Sensitive check), PR 127 (Observational Sensitive Check) and Local check **Table: 16**

IVT - AL & ISTVT constituted with 28 entries including 7 checks and 21 test entries. The trial sent to 20 locations and data was received from 18 locations except Jind (Karnal) and Kurumbapet (Puducherry). The analyzed data pertaining to yield, days to 50% flowering, plant height, panicles/m² and quality presented in tables 16.2 and 16.3. Inclusion of locations in the final analysis is based on monitoring tour reports and location wise general information about stress level of EC and pH, CV%, yield range and mean yield as presented in tabular form.

General information about soil stress parameters and yield performance of entries under alkalinity and inland salinity in IVT AL & ISTVT, Kharif, 2025

Performance of entries under controlled microplot conditions in IVT - AL & ISTVT

Under controlled stress conditions in microplot evaluation at ICAR-CSSRI, Karnal, the IETs. 33788 , 33794, 33796, 33797, 33799 and 33800, possessed dual tolerance for sodicity and inland salinity with a tolerance score of 3.0 - 5.0 as compared to tolerant and sensitive checks, which scored SES scores of 5-7 and 7-8 respectively. IET 33792 with SES of 5.0 found promising for inland saline conditions while IETs 33789, 33791, 33803, 33804 & 33805 found promising for alkaline conditions with SES score of 3.0 - 5.0 as compared to tolerant and sensitive checks.

Locations considered	3	2	1	1	1

Zone wise entries in AL & ISTVT under alkaline conditions and inland saline conditions tested in four zones (Z-II, III, and VI & VII). The experimental mean in zone-II varied from 1961 kg/ha (Lucknow) in Zone –III to 3782 kg/ha (Kurukshetra) in Zone-II for alkaline conditions. Only one location each found suitable in Zone-II (Panipat) and Zone VII (Vytilla)) under inland saline conditions with an experimental of 3656 kg/ha (Panipat) and 3908 kg/ha (Vytilla) respectively. Days to 50% varied from 68 days (Z-II) to 114 (LC), while the plant stature of 59 cm (CSR 10) to 114 (IET 33790) and 37 cm (FL 478) to 148 (IET 33805) under

alkaline and in land saline conditions. The CV% varied from 6.28 % (Annamalainagar) to 18.97 (Kurukshetra) across zones under alkaline and inland saline conditions (Table 16.4).

Performance of entries under alkaline conditions during Kharif, 2025

Under alkaline conditions, data received from 12 locations including sodic microplot screening. The data from six locations only found suitable for inclusion in the final analysis. Among the test entries, **IET 33797** [CSR 388-16-198] in Zone-II & Zone –III over best check; **IET 33804** [NVS-5148] in Zone-VII over early check recorded required significant yield superiority (Table 16.5).

IET 33797 and IET 33804 are promoted to AVT 1 AL&ISTVT under alkaline conditions

Table 16.5: Zone –wise performance of the entries with required significant yield superiority over checks in IVT - AL ISTVT during Kharif 2025

Performance of entries under inland saline conditions during Kharif, 2025

Under inland saline conditions, trial was sent to seven locations in Zone-II, Zone-VI and Zone-VII. Only two locations found suitable for inclusion in the final analysis (Table 48.1). Among the test entries under inland saline conditions, IET nos. 33796 (RP SLK S159 (6887)) and IET 33788 [RP SLK S81 (6886)] in Zone-II; IET 33789 (KR 22006) and IET 33788 (RP SLK S81 (6886)) in Zone- VII exhibited the required significant yield advantage over best check.

IET Nos. 33796, 33788 and 33789 are promoted to AVT1-AL&ISTVT under inland saline conditions.

Summary of IVT - AL & ISTVT

Alkaline conditions Zone II & III: IET 33797 Zone VII: IET33804	Inland Saline conditions Zone II: IET Nos. 33796 & 33788 Zone VII: IET Nos. 33788 & 33789

IET Nos. 33797, 33804, 33796, 33788 & 33789 promoted to AVT1- AL&ISTVT.

ADVANCED VARIETY TRIAL 2 & 1 - COASTAL SALINE TOLERANT VARIETY TRIAL (AVT 2 & 1 - CSTVT)

Locations: 17

Test Entries:16

Checks: Bhuthnath (Coastal Saline Check), FL478, CSR 10 (Early duration check), Pusa 44 (Sensitive check), PR 127 (Observational check) and Local check

AVT 1 – CSTVT trial was constituted with 22 entries including six checks. Three entries (IET 31067, 31877 and 31878) are in the third year of testing and 13 entries are in second year of testing. The trial sent to 17 locations and data was received from 14 locations except from Baruch, Kurumbapet and Bankura. The analyzed data pertaining to yield, days to 50% flowering, plant height, panicles/m² and quality presented in tables 17.2 and 17.3. Inclusion of locations in the final analysis is based on monitoring tour reports and location wise information about stress level of EC and pH, CV%, yield range and mean yield as presented in tabular form.

General information about soil stress parameters and yield performance of entries under in AVT 2 &1 CSTVT, Kharif, 2025

Location/State	Soil pH	Soil EC (dSm-1)	Exptl mean (kg/ha)	Grain Yld Range (Kg/ha)	CV %	Remarks
Zone-II						
Karnal (Microplot)	7.6	9.75	3301	1815-3963	9.32	Data considered to identify tolerant genotypes only
Zone III						
Chinsurah (Gosaba)	6.5	8-10	3835	2167-5437	12.0	Data considered for analysis under stress
Canning Town	6.92	6.51	3310	1919- 4627	11.95	Data considered for analysis under stress
CRRI, Cuttack	7.93 -8.57	7.31 - 10.12	3011	2083-4117	10.4	Sensitive checks high yield than tolerant. Data not considered.
Zone-VI						
Navsari (Danti)	8.4	6.0	2880	2169 -3602	17.2	Data considered for analysis under stress
Nawagam	8.1	4.0	3053	1477 -3800	11.4	Data considered for analysis under stress
Panvel	7.6	5.73	3049	2137 -4383	17.2	Data considered for analysis under stress
Goa	6.5	6.8	1962	554 -3712	19.8	Data considered for analysis under stress.
Zone-VII						
Machilipatnam	8.4	5.9	3225	2148-5130	28.1	Data considered for analysis under stress.
Mugad	6.57	6.24	3700	2143 -5158	4.36	Data considered for analysis under stress.
Brahmavar	7	4.5	1661	1199 -2336	10.3	Data not considered. Low Exptl. mean (<2000 kg/ha)
Puducherry (Karaikal)	8.72	1.65	3906	3121-5335	1.59	Data not considered for analysis, low CV%
Vytilla	4.96	4.15	4172	2900 -5000	8.43	Sensitive checks is high yielding than tolerant. Data not considered for analysis.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Zone wise performance of entries and test cultures indicated that checks are the top performing cultures across all the zones tested. Bhuthnath out performed in zone-VI (3408 kg/ha) and zone-VII (4892kg/ha). Local check is the best check in Zone –III (4282 kg/ha) and FL 478 (SES score of 5.0; 3963 kg/ha) exhibited best performance in saline microplot conditions in Zone-II as compared to other test cultures. The CV% varied from 4.36% (Mugad) to 28.1% (Machilipatnam). Days to 50% flowering varied from 70 days (FL 478) in Zone-II to 129 days (IET32823). FL 478 is the shortest with 58 cm height (Z-II), followed by CSR 10 (Z-III, VI and VII), while IET32822 is the tallest culture with 154 cm height (Zone-III).

Performance of entries Zone-II

In Zone II, the entries were tested in controlled stress conditions of microplot at CSSRI, Karnal. The standard evaluation scores (SES) recorded by the test entries, tolerant and sensitive checks are presented in table below.

Entry No	IET No/ Check entry	ZONE II (Karnal)	
		Yield (kg/ha)	Vigor/SES (Saline)
4903	Bhuthnath (Coastal saline Tolerant check)	3574	6
4905	CSR 10 (Early duration saline check)	3870	5
4907	32807	1815	8
4908	Pusa 44 (Sensitive check)	2093	7
4909	32821	3852	6
4912	FL 478 (Saline tolerant check)	3963	5
4917	LC	3759	6
4919	PR 127 (Observational Sensitive check)	3481	6

Annual Progress Report 2025 Vol. I – Varietal Improvement

Experimental Mean	3301
CD(0.05)	539
CV(%)	9.32
F val	22.89**
Local Check Name	CSR 27

Under saline conditions in microplot evaluation, the IETs. 32807, 32821 recoded a tolerance score of SES 8.0 and 6.0 respectively; as compared to tolerant and sensitive checks which scored an SES scores of 5-7. IET 32821 found to be promising for stress tolerance as it exhibited on par SES score of tolerant checks.

Performance of entries Zone-III

In Zone-III, 15 entries evaluated in three locations of CRRI, Cuttack, Canning Town and Chinsurah. Data from two locations suitable for final analysis. Local Check with 4282 kg/ha and 105 day to flowering is the best and early duration check in Zone-III. ***None merits promotion in zone-III.***

Performance of entries Zone-VI

In Zone-VI, the trial data four locations- Panvel, Navsari, Nawagam and Goa was included in the final analysis. Three test cultures IET 31067, 32807 and 32821 along with checks were tested in zone-VI. Bhuthnath (Coastal Saline Check) with mean yield of 3408 kg/ha and 102 days to 50 % flowering is the highest yielding culture among all the test entries and checks. Further, upon comparison with the early check- FL 478 with 86 days to flowering in zone-VI, none of the entries is in comparable flowering duration of early check. ***None merits promotion in zone-VI.***

Performance of entries Zone-VII

In zone-VII, the data from Machilipatnam, Mugad, Brahmavar, Puducherry (Karaikal) and Vytilla received. The data from Machilipatnam and Mugad were only suitable for inclusion in the final analysis. Based on two locations data, promising genotypes identified. Among the test entries and checks, Bhuthnath (Coastal Saline Check) with mean yield of 4892 kg/ha and 115 days to 50 % flowering is the highest yielding entry among all the test entries and checks. ***None of the entries found promising over best check in Zone-VII.*** Further, upon comparison with the early check- CSR 10 with 97 days to flowering in zone-VII, none of the entries is in comparable flowering duration of early check. ***None merits promotion in zone-VII to next level.***

Performance of the entries with required significant yield superiority over checks in AVT 2 & 1 CSTVT during *kharif* 2025

Summary

AVT 1 - CSTVT:

Thirteen entries tested in three zones (Z - III, VI & VII)

None of the entries in AVT 1 - CSTVT merit promotion to AVT 2 - CSTVT.

AVT 2 - CSTVT:

Three entries tested (Z - III, VI & VII). IET Nos. 31877, 31878 and 31067 completed three years of testing.

Zone – III: IET Nos. 31877 and 31878

Zone – VI: IET 31067

**INITIAL VARIETY TRIAL - COASTAL SALINE TOLERANT VARIETY TRIAL
(IVT - CSTVT)**

Locations: 16

Test Entries: 31

**Checks: Bhuthnath (Coastal Saline Check), FL478, CSR 10 Table: 18
(Early duration check), Pusa 44 (Sensitive check), PR
127 (Observational Check) and Local check**

IVT– CSTVT trial constituted with 31 test entries and 6 checks. The trial sent to 16 locations and data was received from 14 locations during Kharif 2025 except from Baruch, Kurumbapet. However, the data from 6 locations is only suitable for inclusion in the final analysis. The analyzed data pertaining to yield, days to 50% flowering, plant height, panicles/m² and quality presented in tables 18.2 and 18.3. Inclusion of locations in the final analysis is based on monitoring tour reports and location wise information about stress level of EC and pH, CV%, yield range and mean yield as presented in tabular form.

General information about soil stress parameters and yield performance of entries under in IVT- CSTVT, Kharif, 2025

Location/State	Soil pH	Soil EC (dSm-1)	Exptl mean (kg/ha)	Grain Yld Range (Kg/ha)	CV %	Remarks
Zone-II						
Karnal (Microplot)	7.5	10.0	3294	1852-4259	12.16	Data considered to identify tolerant genotypes only
Zone-III						
Chinsurah (Gosaba)	7.25	5.94	4257	2507 -5488	10.8	Data considered for analysis under stress
Canning Town	8.01	6.99	3749	1007 -5636	11.4	Data considered for analysis under stress
CRRI, Cuttack	7.9 - 8.1	5.8 – 8.5	3387	2759-4060	8.82	Sensitive checks high yield than tolerant. Data not considered.
Zone-VI						
Navsari (Danti)	8.5	5.3	2749	1121 -4220	17.9	Data considered for analysis under stress
Nawagam	8.1	4.0	33	2001 -4752	12.3	Data considered for analysis under stress
Panvel	7.8	11.4	--	--	--	Trial vitiated at vegetative stage
Goa	6.8	4.1	3399	1632 -4912	4.21	Data not considered based on monitoring tour report
Zone-VII						
Machilipatnam	8.7	5.9	3022	2028 -4935	17.5	Data considered for analysis under stress.
Vytilla	4.96	4.15	4205	3000 -5667	13.6	Data considered for analysis under stress.
Mugad	7.13	5.41	3829	2330-5323	4.21	Low CV%. Sensitive check is high yield than tolerant. Data not considered.
Brahmavar	7.8	6.5	1043	543-2311	12.8	Data not considered. Low Exptl. mean (<2000 kg/ha)
Karaikal (Puducherry)	8.7	1.6	3406	1733-4789	12.14	Data not considered. Sensitive check high yield than tolerant.

Among the test entries and checks across zones, IET 33830 (5386 kg/ha), and IET 33819 (4752 kg/ha) are top performing in zone-III and Zone-VI respectively, while local check (4894 kg/ha) is highest yielding in Zone-VII. The CV% varied from 10.79% (Chinsurah) to 17.92% (Navsari). Days to 50% flowering varied from 83 days (FL 478) in Zone-II to 126

Annual Progress Report 2025 Vol. I – Varietal Improvement

days (33809, 33826) in zone-VII. PR 127 is the shortest with 51 cm height (Z-II), followed by CSR 10 (Z-III, VI), while IET 33835 is the tallest culture with 163 cm height (Zone-III).

Performance of entries: Zone-III

In Zone-III, based on Canning Town and Chinsurah, six test cultures namely IET Nos. 33830, 33826, 33823, 33806, 33822 & 33824 recorded the required significant yield superiority over best check.

IET Nos. 33830, 33826, 33823, 33806, 33822 & 33824 promoted to AVT1-CSTVT

Performance of entries : Zone-VI

In Zone-VI, the trial data three locations- Navsari, Nawagam and Goa. Two locations (Navsari, Nawagam) data was included in the final analysis. Bhuthnath is the best check with 4023 kg/ha and 91 days to flowering. None of the test entries exhibited significant yield superiority over best check. Upon comparison of early duration check- FL 478 (2846 kg/ha) with 83 days to flowering, IET 33813 (3463kg/ha) exhibited significant yield superiority over early check (Table 50.1).

IET 33813 is promoted to AVT1-CSTVT in Zone-VI

Performance of entries: Zone-VII

In zone-VII, the data from Machilipatnam, Mugad, Brahmavar, Puducherry (Karaikal) and Vytilla received. The data from Machilipatnam and Vytilla were only suitable for inclusion in the final analysis. Among the test entries and checks, Local check with mean yield of 4894 kg/ha and 100 days to 50 % flowering is the highest yielding entry and best check as well as early check (Table 50.1). ***None of the entries found promising over best check & early check in Zone-VII.***

None merits promotion in zone-VII to AVT 1 - CSTVT

Summary of entries promoted in IVT - CSTVT to AVT 1 - CSTVT

Zone-III: IET Nos. 33830, 33826, 33823, 33806, 33822 & 33824

Zone-VI: IET 33813

IET Nos. 33830, 33826, 33823, 33806, 33822, 33824 & 33813 are promoted to AVT1-CSTVT

Advance Varietal & Initial Variety Trial - Aromatic Grain Type (AVT 2 &1 & IVT - AGT)

Locations: 33**Test entries: 34****Table: 25**

Checks: Shobini (National), Badshahbhog Sel-1 (Northern & Central), CR Sugandh Dhan 907 (Eastern & North Eastern), GAR – 14 (Western) Sugandh Samba (Southern) – Zonal, Dubraj Sel-1 and Ketekijoha – Quality, Rajendranagar Vari-2 (RNR 15435) – Long Grain Check and Local check.

Advance Varietal & Initial Variety Trial Aromatic Grain Type (AVT 2 &1 & IVT-AGT) was constituted with **34 test entries** in all the zones along with National check - Shobini, zonal check Badshahbhog Sel-1 (Northern and central), CR Sugandh Dhan 907 (Eastern and North-Eastern), GAR-14 (Western), Sugandh Samba (Southern). The quality checks were Dubraj Sel-1, Ketakijoha and long grain check was Rajendranagar Vari 2 (RNR 15435) and local check. The trial was sent to **33 locations** and the data was received from **28 locations**. Among the 34 test entries, one entry was in the third year of testing, six entries in second year of testing and the remaining 27 entries was in the first year of testing. The data from 5 centers was not received i.e., Chinsurah, Bankura, Gerua, Bilaspur and Kurumbapet. The data from Kanpur, Nagina, Sabour, Jeypore, Gorakhpur, Hathwara, was excluded in analysis due to low experimental yield (< 3500 Kg/ha) and hence data from 28 locations was utilized in data analysis. The data for grain yield, days to 50% flowering, plant height, panicles/m² and data of grain quality are presented in the Table.

In second year of testing, entries i.e., IET 32845, IET 32846, IET 31912 and first year of testing, entries i.e, IET 33932, IET 33924, IET 33925, IET 33921, IET 33920 recorded required significant yield superiority, Whereas, IET 31912 (Low HRR) and IET 33932 (Low HRR and No aroma) are not promoted.

Three years' performance of the entries: One entry, IET 31909 R 2356-218-98-1 (Swarna /Badshabhog sel.-1) completed three years of testing with required significant advantage over the checks for two years (2023 and 2024), but not out-yield the checks in the third year of testing. Yield performance along with ranks across three years in various zones for these entries is given in the following table.

Table: Three-year performance of entries during *kharif* 2023, 2024 & 2025 Zone VII

	IET No	Year	II	III	IV	V	VI	VII	Grain quality (GT/HRR/AC/GC/ASV/Aroma) & Remarks	
1	IET 31909 R 2356-218-98-1 (Swarna /Badshabhog sel.-1)	2025	--	--	--	--	--	5340	SS; HRR: 67.0%; AC-23.61; GC-22; ASV-4; Aroma -MS	The entry did not out-yield in the third year of testing
		2024	--	--	--	--	--	6566 (4)*	SS; AC-23.32; GC-22; ASV-4; Aroma -MS	
		2023	--	--	--	--	--	6632 (1)*	SS; HRR: 59.5 %; AC- 23.52; GC-22; ASV-4; Aroma -MS	

Entries promoted:

AVT1 (AGT) to AVT 2 (AGT)		IVT (AGT) to AVT1 (AGT)	
Zone II:	None	Zone II:	None
Zone III:	IET 32846	Zone III:	IETs 33925, 33932

ADVANCE VARIETAL TRIAL 2 & 1 – LOW PHOSPHORUS TOLERANCE (AVT 2 & 1 - LPT)

Locations: 8

Checks: Tolerant –Swarna, DRR Dhan 60 Rasi and

Vandana (Early check)

Sensitive – Improve Samba Mahsuri

Test Entries: 31

Table: 20

AVT 2&1 Low Phosphorus Tolerance trial was constituted with 31 test entries with four positive checks Viz., Swarna, DRR dhan 60, Rasi and Vandana (Early check). The trial was conducted at two levels of Phosphorus P 50 (50% of recommended Phosphorus) and P 100 (100% of recommended Phosphorus). In both the levels, Nitrogen and Potash are applied as per recommended doses. The trial was sent to 10 locations but the data was not received from two locations Vadagaon and Mandya. The data from remaining 8 locations viz., Bikramganj, PUSA, Ranchi, NRRI-Cuttack, Karjat, Maruteru, Gangavati and ICAR IIRR was considered for analysis under both 50% Phosphorus and 100% Phosphorus levels. Among 31 test entries, 15 entries viz., IETs 31102, 31107, 31108, 31966, 31968, 31969, 31973, 31975, 31976, 31979, 31980, 31982, 31985, 31986 and 29546 (NIL of Pusa 44) are in third year of testing; 16 entries viz., IETs 31972, 31981, 32852, 32853, 32854, 32855, 32856, 32858, 32859, 32860, 32861, 32862, 32863, 32865, 32867 and 32870 are in second year of testing. The entry qualifies for promotion/found promising if it is significantly superior (By considering CD value) over the best check at P 50% at zone level. The entries are compared with respective checks based on days to 50% flowering. The entries having flowering duration of 80 to 90 days are compared with Vandana, the entries with days to 50% flowering 90 to 100 days are compared with Rasi and the entries with more than 100 days to 50% flowering are compared with Swarna or DRR Dhan 60. Since both Vandana and Rasi flowered between 80 to 90 in all the zones, only two classifications are made. Less than 90 days duration entries are compared with either Rasi or Vandana and more than 90 days (medium duration) are compared with Swarna and DRR Dhan 60.

The information on different parameters under 50% phosphorus is provided in the table below.

Zones	III	VI	VII
Range : Zonal mean (Kg/ha)	3128 (Rasi) – 4654 (IET 32861)	3355 (Rasi) – 7153 (DRR Dhan 60)	2524 (Vandana) – 6345 (IET 31969)

INITIAL VARIETY TRIAL - LOW PHOSPHORUS TOLERANCE (IVT - LPT)

Locations: 10

**Checks: Tolerant –Swarna, DRR Dhan 60, Rasi and
Vandana (Early check)
Sensitive – Improve Samba Mahsuri**

Test Entries: 15

Table: 21

IVT Low Phosphorus Tolerance trial was constituted with 15 test entries with four positive checks viz., Swarna, DRR dhan 60, Rasi and Vandana (Early check) and one sensitive check. The trial was conducted at two levels of Phosphorus P 50 (50% of recommended Phosphorus) and P 100 (100% of recommended Phosphorus). In both the levels, Nitrogen and Potash are applied as per recommended doses. The trial was sent to 10 locations but the data was not received from two locations Vadagaon and Mandya. The data from remaining 8 locations viz., Bikramganj, PUSA, Ranchi, NRRI-Cuttack, Karjat, Maruteru, Gangavati and ICAR IIRR was considered for analysis. The entry qualifies for promotion/found promising if it is significantly superior at zone level by considering CD value over the best check at P 50%. The entries are compared with respective checks based on days to 50% flowering. The entries having flowering duration of 80 to 90 days are compared with Vandana, the entries with days to 50% flowering 90 to 100 days are compared with Rasi and the entries with more than 100 days to 50% flowering are compared with Swarna or DRR Dhan 60. Since both Vandana and Rasi flowered between 80 to 90 in all the zones, only two classifications are made. Less than 90 days duration entries are compared with either Rasi or Vandana and more than 90 days (medium duration) are compared with Swarna and DRR Dhan 60.

The information on different parameters under 50% Phosphorus is provided in the table below.

ADVANCE VARIETAL TRIAL 2 & 1 – LOW NITROGEN TOLERANCE (AVT 2 & 1 - LNT)

Locations: 10

Test Entries: 18

Checks: Tolerant –Swarna, Varadhan, DRR Dhan 64 and Rasi

Table: 22

Sensitive – Improve Samba Mahsuri

AVT 2&1 Low Nitrogen Tolerance trial was constituted with 18 test entries and four positive checks Viz., Swarna, Varadhan, DRR dhan 64 and Rasi and one sensitive check viz., Improved Samba Mahsuri. The trial was conducted at two levels of Nitrogen N 50 (50% of recommended Nitrogen) and N 100 (100% of recommended Nitrogen). In both the levels, Phosphorus and Potash are applied as per the recommended dose. The trial was sent to 11 locations but the data was not received from one location (Vadagaon). The data from remaining 10 locations viz., Ludhiana, Bikramganj, PUSA, Ranchi, NRRRI-Cuttack, Karjat, Navasari, Maruteru, ICAR IIRR and Mandya was considered for analysis. Among 18 test entries, 9 entries viz., IETs 31990, 31993, 31994, 31998, 32009, 32010, 29577(R), 30261 and 31124 are in third year of testing; and 9 entries viz., IETs 32874, 32875, 32878, 32883, 32884, 32885, 32889, 3289 and, 32891 are in second year of testing. The entry qualifies for promotion/found promising at zone level if it is significantly superior by considering CD value over the best check at N 50%. The entries are compared with respective checks based on days to 50% flowering. The entries having flowering duration of < 100 days are compared with Varadhan/Rasi, and the entries with more than 100 days to 50% flowering are compared with Swarna and DRR Dhan 64. Details of performance of entries under 50% nitrogen is mentioned in below table.

Annual Progress Report 2025 Vol. I – Varietal Improvement

In AVT 2 LNT, four entries IETs 31990, 32009, 32010 and 31124 recorded required significant yield superiority in zone II and their three year's performance is presented in the table. In AVT 1, two entries IETs 32889 and 32891 recorded required significant yield superiority in zone II.

Performance of the entries with required significant yield superiority over checks under 50% Nitrogen in AVT 2&1 LNT during kharif 2025

SUMMARY

ADVANCE VARIETY TRIAL 2&1 LOW NITROGEN TOLERANCE (AVT 2 & 1 - LNT)

Locations: 10

Test entries: 18

Checks: Tolerant –Swarna, DRR Dhan 64, Rasi and Varadhan (Early check)

Sensitive – Improve Samba Mahsuri

List of the entries promoted from AVT 1 - LNT to AVT 2 – LNT

IET 32889 and IET 32891 got promoted to AVT 2 LNT in Zone II

List of the entries performed superior in AVT 2 - LNT:

IET 31990: Promising for Z II and Z III

IET 32010: Promising for Z II.

Table No. 22.1: Composition of entries in Advance Varietal Trial 2 & 1 – Low Nitrogen Tolerance Trial (AVT 2 & 1 – LNT), Kharif 2025

INITIAL VARIETY TRIAL – LOW NITROGEN TOLERANCE (IVT - LNT)

Locations: 11

Test Entries: 17

Checks: Tolerant –Swarna, Varadhan, DRR Dhan 64 and Rasi

Table: 23

Sensitive – Improve Samba Mahsuri

IVT Low Nitrogen Tolerance trial was constituted with 17 test entries and four positive checks Viz., Swarna, Varadhan, DRR Dhan 64 and Rasi and one sensitive check viz., Improved Samba Mahsuri. The trial was conducted at two levels of Nitrogen N 50 (50% of recommended Nitrogen) and N 100 (100% of recommended Nitrogen). In both the levels, Phosphorus and Potash are applied as per the recommended dose. The trial was sent to 11 locations but the data was not received from one location (Vadagaon). The data from remaining 10 locations viz., Ludhiana, Bikramganj, PUSA, Ranchi, NRRI-Cuttack, Karjat, Navasari, Maruteru, ICAR IIRR and Mandya was considered for analysis. The entry qualifies for promotion by considering CD value superior over the best check at zone level if it is significantly at N 50%. The entries are compared with respective checks based on days to 50% flowering. The entries having flowering duration of < 100 days are compared with Varadhan/Rasi, and the entries with more than 100 days to 50% flowering are compared with Swarna and DRR Dhan 64. Details of performance of entries under 50% nitrogen is mentioned in below table.

ADVANCE VARIETY TRIAL 1 & INITIAL VARIETY TRIAL - COLOURED RICES (AVT 1 & IVT – Coloured Rice)

Locations: 34

Test Entries: 37

Checks: Choharto (Red rice Check), Jyothi (Matta Red Rice Check), Kauni (Black Rice check) and Local check **Table: 24**

Advanced Variety Trial 1 & Initial variety trial Coloured rices (AVT 1 & IVT – Coloured Rice) was constituted with 37 test entries of which 6 entries were evaluated in second and 31 entries were evaluated in first years of testing along with four checks Choharto (Red rice Check), Jyothi (Matta Red Rice Check), Kauni (Black Rice check) and Local check. The trial was sent to 34 locations across I, II, III, IV, V, VI and VII zones, and the data was received from all the locations except New Delhi and Arundhutinagar. Trial failed at CAU Imphal and Brahmavar. The range of various parameters across the zones is presented in the following table.

Zones	I	II	III	IV	V	VI	VII
Zonal mean (kg/ha)	1261 (33887) to 6577 (32025)	1455 (33902) to 5139 (28664)	3455 (33886) to 5654 (28664)	1818 (33902) to 7084 (32896)	1526 (Kavuni) to 7025 (33905)	2385 (33885) to 5550 (33899)	3142 (Choharto) to 5030 (33909)

DNI (@)	ALM (1861 kg/ha) (low experimental mean yield)	KUL (2355 kg/ha) (low experimental mean yield)	--	--	--	NWG (2351 kg/ha) (low experimental mean yield)	--
Locations considered	1	2	11	1	1	2	9

@DNI-Data not considered due to low/high CV or low experimental mean yield or non-significant F value

Among the six entries that are in second year of testing, three entries (IETs 28664, 32025 and 32896) recorded required significant yield superiority and their performance is presented in the table. Among the 31 entries in the first year of testing, seven entries (IETs 33888, 33898, 33899, 33903, 33904, 33905 and 33908) recorded required significant yield superiority.

Annual Progress Report 2025 Vol. I – Varietal Improvement

**NEAR ISOGENIC LINES (NIL'S) AND GENOME EDITED LINES (GEL'S):
(AVT 2 & 1 NIL'S AND GEL'S TRIAL)**

Locations: 18

Test Entries: 31

Table: 19

Near Isogenic lines (NIL's) and Genome edited lines (GEL's) were evaluated in a separate AVT 2 and 1 trials during Kharif 2025. The NIL's along with their respective recurrent parents were evaluated for yield under regular yield trials in gazette notified and varietal adaptable states and for target traits viz., yield, aroma, herbicide tolerance, drought tolerance, submergence tolerance, coastal salinity tolerance, bacterial leaf blight resistance, blast resistance, sheath blight resistance and gall midge resistance, a separate trial across the hot spot locations across the country were conducted.

The yield trial and target trials data were analysed as per the approved guidelines for testing of NILs during the breeder's group meeting held at 53rd Annual Rice Group Meetings (ARGM) on 13th April 2018 (Draft Proceedings of 53rd ARGM, 2018; Page 45) and 54th Annual Rice Group Meetings (ARGM) on 29th May, 2019 (Draft Proceedings of 54th ARGM, 2019; Page 6, 42-43).

Assessment of NIL and GEL entries tested under AVT 2 & 1 trial

In the AVT 1 & 2 NIL and GEL trials, a total of fifteen NIL entries and five GEL entries were included. Among these, two NIL entries are in their second year of testing, while the remaining entries are in their first year. All entries were evaluated for yield performance in Gazette-notified states and in the adapted areas of their respective recurrent parents (RP).

Near Isogenic Lines (NILs) in the genetic background of Samba Mahsuri (BPT 5204)

Two NIL entries in the genetic background of BPT 5204 viz., IET 32964 (possessing genes resistance to blast, *Pi9*) and IET 30952 (R) (processing QTL *qGN4.1* for yield) were evaluated in Zone VII.

IET 32964 is in second year of testing and recorded at par yield performance over the recurrent parent BPT 5204, evaluated over 12 locations across zone VII. The NIL entry IET 32964 recorded blast resistance reaction (SI 4.4) compared to recurrent parent with SI index of 5.2. Quality wise, it showed high HRR (67.6%), long bold grains, high AC (28.13%) and GC of 51. Due to unacceptable quality parameters and grain type difference compared to RP (Medium Slender grains), ***IET 32964 is discontinued.***

Another NIL entry IET 30952, a repeat entry recorded inferior yield of -8.60% compared to recurrent parent BPT 5204, evaluated over 12 locations across zone VII. ***Hence, IET 30952 is dropped.***

Performance of NIL's in the genetic background of Samba Mahsuri during 2025

Near Isogenic Lines (NILs) in the genetic background of Pusa 44

Two NIL's IET 32046 (R) and IET 29546 (R) in the genetic background of Pusa 44 were evaluated during Kharif 2025. NIL entry IET 32046 (R) a repeat entry in the genetic background of Pusa 44 processing yield QTL *qGN4.1* was evaluated in zone VII. IET 32046 recorded inferior yield of -17.93% compared to recurrent parent BPT 5204, evaluated over 12 locations across zone VII. **Hence, IET 32046 is dropped.**

Performance of the Pusa 44 NIL entry during Kharif 2025

32046 (Repeat)	Pusa 44 (Yield)	AN, AP, KA, KE, TS, TN	12	5516	4527	-17.93% Inferior	Dropped due to inferior yield compared to RP

RP: Recurrent Parent; * Plus CD value; # Minus CD value

Another NIL entry, IET 29546, a repeat entry developed in the genetic background of Pusa 44 and carrying the low phosphorus tolerance QTL *Pup1*, was evaluated under low P condition. The entry showed yield performance at par with the recurrent parent under normal condition in the previous year of testing. However, low P data were not available during the previous year. In 2025, under low P stress, the entry recorded at par yield compared to the recurrent parent. **As no significant yield advantage was observed, IET 29546 was dropped.**

Performance of NIL IET 29546 in the genetic background of Pusa 44 during 2025

Near Isogenic Line (NIL) in the genetic background of WGL 14 (Warangal Samba)

Two near-isogenic lines (NILs), IET 33837 and IET 33838, developed in the genetic background of WGL 14 (Warangal Samba), were evaluated in zone VII under the AVT 2 & 1 NIL and GEL trials. IET 33837 carries genes conferring resistance to blast (*Pi9+Pipt+Pi1+Pi20*) and gall midge (*Gm4+Gm8*), whereas IET 33838 possesses resistance genes for bacterial leaf blight (*Xa21+xa5+xa8+Xa38*) and gall midge (*Gm4+Gm8*). IET 33837 recorded lower yield and exhibited a susceptible reaction to blast, with a severity score of 5.9 compared to 5.8 in the recurrent parent. Similarly, IET 33838 also showed inferior yield performance compared to the recurrent parent. **Hence, both NILs, IET 33837 and IET 33838 were dropped.**

Performance of the WGL 14 NIL entries during Kharif 2025

Near Isogenic Lines (NIL's) in the genetic background of DRR Dhan 53

One NIL, IET 32980 a repeat entry in the genetic background of DRR Dhan 53 was evaluated in zones III, V, VI and VII. The target trait for NIL IET 32980 are bacterial leaf blight and sheath blight resistance. IET 32980 recorded on par yield in zone III and VII, superior yield performance in zone V and VI compared to recurrent parent, DRR Dhan 53. The entry exhibited comparable resistance reaction to the recurrent parent for bacterial leaf blight (4.6) and resistance reaction to sheath blight, with severity index of 5.0 compared to 6.9 in DRR Dhan 53. **Hence, IET 32980 is promoted to second year of testing.**

		TS, TN)							yield

Near Isogenic Lines (NIL's) in the genetic background of DRR Dhan 50

Two NILs, viz., IET 32981 (R) and IET 33841, were developed in the genetic background of DRR Dhan 50, targeting drought and submergence tolerance. In the submergence trial, both entries were not evaluated; however, under normal and submergence conditions, only IET 32981 was evaluated.

IET 32981 recorded inferior yield under normal condition and superior yield performance under drought stress condition compared to recurrent parent, DRR Dhan 50. **Hence, IET 32981 is dropped.**

IET 33841 recorded yield at par with the recurrent parent under normal conditions but was not evaluated under stress conditions; therefore, it is recommended for **repeat** testing.

Near Isogenic Lines (NILs) in the genetic background of 28P67

One NIL entry, IET 32990, developed in the genetic background of 28P67 and carrying the bacterial leaf blight resistance gene Xa21, was evaluated across Zones II, III, and V.

Annual Progress Report 2025 Vol. I – Varietal Improvement

IET 32990, in its second year of testing, exhibited at par yield performance in Zone III and superior yield in Zone V compared to the recurrent parent 28P67. The entry was evaluated across 12 locations spanning Zones III and V. In terms of disease reaction, IET 32990 recorded a lower bacterial leaf blight severity index (SI: 4.3) compared to the recurrent parent (SI: 6.2), indicating improved resistance. **Hence, IET 32990 found promising.**

Performance of NIL's in the genetic background of 28P67 during 2025

Near Isogenic Lines (NILs) in the genetic background of 28P68

One NIL entry, IET 33995, developed in the genetic background of 28P68 and possessing genes for resistance to bacterial leaf blight (BB) and brown planthopper (BPH), was evaluated across Zones III and V. IET 33995, in its first year of testing, recorded at par yield performance in both Zones III and V compared to the recurrent parent 28P68. In Zone III, evaluated over 6 locations, the NIL registered a slight yield reduction of -2.13%, while in Zone V, across 5 locations, it showed a moderate yield advantage of 3.53%, though statistically at par in both zones. With respect to pest and disease reaction, IET 33995 exhibited a bacterial leaf blight severity index of 4.9 compared to 5.6 in the recurrent parent. For brown planthopper, the NIL recorded a lower severity index (3.9) compared to the recurrent parent (5.3). ***Due to on par disease reaction to bacterial leaf blight, IET 33995 is dropped.***

Genome Edited Lines- GEL TRIAL

Assessment of GEL entries tested under AVT 2-NIL and GEL trial

Five Genome Edited Lines (GEL) entries were evaluated in the AVT 2–NIL and GEL trial, all in their first year of testing. Among these, IET 33842, developed in the genetic background of MTU 1010, targets yield improvement. The remaining four entries namely IET 33843 and IET 33844 (targeting aroma), and IET 33845 and IET 33846 (targeting yield) were developed in the genetic background of ASD 16.

Genome Edited Lines (GELs) in the genetic background of MTU 1010

One GEL trial entry, IET 33842, is an edited line of MTU 1010 developed through genome editing techniques. The IET 33842, along with its wild parent MTU 1010, was evaluated at twelve locations in zone VII.

The mean grain yield of IET 33842 was 4459 kg/ha, with a range from 4049 kg/ha to 5208 kg/ha. In comparison, its wild parent, MTU 1010, had a mean yield of 4799 kg/ha, ranging from 3657 kg/ha to 6742 kg/ha. IET 33842 demonstrated inferior yield performance (-7.08%) in zone VII, showing yield of +10.72% in Andhra Pradesh, -20.16% in Karnataka, +0.72% in Kerala, -26.76% in Telangana, +1.06% in Tamil Nadu and +5.58% in Andaman and Nicobar Islands compared to its wild parent. Overall, IET 33842 recorded inferior yield of -7.08% compared to the wild parent. **Hence, IET 33842 is dropped.**

Performance of Genome Edited Line entry (IET 33842) and its wild parent (MTU 1010) during Kharif 2025

States	Locations	IET 33842	MTU 1010	CD	% Yield Advantage over its Wild Parent
AP	3	4049	3657	432	+10.72
KA	2	4296	5381	391	-20.16
KE	2	4171	4141	541	+0.72

Genome Edited Lines (GELs) in the genetic background of ASD 16

Four GEL trial entries, viz., IET 33843 and IET 33844 (targeting aroma), and IET 33845 and IET 33846 (targeting yield), developed using genome editing techniques in the genetic background of ASD 16, were evaluated across twelve locations in Zone VII.

The aroma-targeted entries, IET 33843 and IET 33844, recorded mean grain yields of 4167 kg/ha and 4334 kg/ha, respectively, compared to 4295 kg/ha for the wild parent ASD 16. IET 33843 showed a marginal yield reduction of -2.98%, whereas IET 33844 exhibited a slight yield advantage of +0.91% over the wild parent. Both entries were found to be at par in yield performance. Notably, these lines demonstrated improvement in grain quality, with IET 33843 expressing mild scent (MS) and IET 33844 expressing strong scent (SS), in contrast to the no scent (NS) trait of ASD 16. Considering their enhanced aroma with stable yield performance, **both entries IET 33843 and IET 33844 are promoted.**

Performance of IET 33843, IET 33844 during Kharif 2025

IET No	Wild Parent and traits	States	No. of loc.	Normal condition (CD:212)			Target Trait		Remarks
				Wild parent Yield	GEL Yield	Over Wild parent	Aroma		
							Wild parent	GEL	
33843	ASD 16 (Aroma)	Zone VII	12	4295	4167	-2.98% At Par	No scent (NS)	Mild Scent (MS)	Promoted
33844	ASD 16 (Aroma)	(AP, KA, KE, TS, TN AN,)	12	4295	4334	+0.91% At par	No scent (NS)	Strong Scent (SS)	Promoted

The yield-targeted entries, IET 33845 and IET 33846, recorded mean grain yields of 4584 kg/ha and 4501 kg/ha, respectively, compared to 4295 kg/ha for ASD 16. IET 33845 demonstrated a clear yield advantage of +6.73% over the wild parent, with notable performance gains observed in Andhra Pradesh (+11.18%), Kerala (+41.47%), and Tamil Nadu (+5.29%), though relatively lower yields were recorded in Karnataka (-5.09%), Telangana (-9.45%), and Andaman & Nicobar Islands (-15.10%). Overall, the entry exhibited consistent superiority across locations and was categorized as superior. **Hence IET 33845 is promoted.**

Annual Progress Report 2025 Vol. I – Varietal Improvement

IET 33846 recorded a modest yield advantage of +4.80% over the wild parent, with positive gains observed in Andhra Pradesh (+4.16%), Kerala (+22.75%), and Tamil Nadu (+2.88%). However, marginal yield reductions were noted in Karnataka (-4.42%), Telangana (-1.55%), and the Andaman & Nicobar Islands (-7.92%). Overall, the entry performed at par with the wild parent without any significant yield improvement. **Hence, IET 33846 is dropped.**

Performance of GEL entries IET 33845, IET 33846 and its wild parent ASD 16 during Kharif 2025

ADVANCE VARIETAL TRIAL 1 – IRRIGATED DSR (AVT 1 – DSR)

Locations: 35

Test Entries: 17

Checks:	Sahbhagi Dhan (Early), DRRH 4 (Early Hybrid), DRR Dhan 70 (Medium), DRR Dhan 55 (Medium), CR Dhan 702 (Late Hybrid), DRR Dhan 50 (Late), Local check	Table: 26

Advance Variety Trial 1 - DSR (AVT 1 - DSR) was constituted with 17 test entries including checks Sahbhagi Dhan (Early), DRRH 4 (Early Hybrid), DRR Dhan 70 (Medium), DRR Dhan 55 (Medium), CR Dhan 702 (Late Hybrid), DRR Dhan 50 (Late), Local check. The 10 test entries included seven entries in the second year of testing. The trial was sent to 36 locations, data was received from 29 locations and not received from 7 locations (Delhi, Kota, Chiplima, Gorakpur, Derol, Pattambi, Kurumbapet) and 24 locations data was considered for analysis. Data from 5 centres were excluded from analysis viz., Jagadapur, Navsari, Navagam, Adhuthurai and Kurumbapet due to either low (<5%) / high CV (20%) or low experimental yield (<3000Kg/ha) or based on non-significant F Value. Among the centres from which data is included in analysis, location-wise mean grain yield ranged from 3188 kg/ha (Mandya) to 7292 kg/ha (Warangal), while, CV ranged from 2.59% (Pusa) to 15.61% (Raipur).

INITIAL VARIETAL TRIAL – Irrigated DSR (IVT – DSR)

Locations: 36

Test Entries: 57

Checks: Sahbhagi Dhan (Early), DRRH 4 (Early Hybrid), DRR Dhan 70 (Medium), DRR Dhan 55 (Medium), CR Dhan 702 (Late Hybrid), DRR Dhan 50 (Late), Local check **Table: 27**

Initial Variety Trial -DSR (IVT - DSR) was constituted with 57 test entries and 7 checks Sahbhagi Dhan (Early), DRRH 4 (Early Hybrid), DRR Dhan 70 (Medium), DRR Dhan 55 (Medium), CR Dhan 702 (Late Hybrid), DRR Dhan 50 (Late), Local check. The trial was sent to 36 locations, data was received from 29 locations and not received from 7 locations (Kota, Chiplima, Lucknow, Titabar, Derol, Pattambi, Kurumbapet) and 24 locations data was considered for analysis. Data from 5 centres were excluded from analysis viz., Gorakpur, Masodha, Jagadapur, Rewa and Navagam due to either low (<5%) / high CV (20%) or low experimental yield (<3000 Kg/ha) or based on non-significant F Value. Among the centres from which data is included in analysis, location-wise mean grain yield ranged from 2986 kg/ha (Mandya) to 6993 kg/ha (Varanasi), while, CV ranged from 5.76% (Arundathinagar) to 22.15% (Raipur).

MONITORING OF AICRPR TRIALS, KHARIF 2025

The monitoring teams comprising of scientists from IIRR, CRRI and IARI visited physically to different AICRIP centres during kharif 2025. The information received from field monitoring and evaluation of AICRIP trial across different zones of India, coordinated from IIRR and zone wise proceedings of the monitoring compiled is presented below:

Multi-disciplinary teams of IIRR, CRRI and IARI for monitoring of coordinated trials and breeder seed production, kharif 2025

Zones	Crop Improvement	Crop Protection	Crop Production	Locations
Zone-I (Hills)	Dr. CN Neeraja (IIRR), Dr. Jyothi Badri (IIRR)	Dr.V. Prakasam (IIRR)	-	Khudwani, Pombay, Larnoo and Wadura Malan and Palampur
Zone II (North Western-1)	Dr. A.S. Hari Prasad, (IIRR) Dr. Prolay B (IARI)	Dr. P. Jeyakumar, (IIRR) Dr. G.S.Jasudasu, (IIRR)	Dr.Milan Kumar Lal, (CRRI)	New Delhi; Almora; Pantnagar; Chatha Nagina; Modipuram
Zone II North (Western-2)	Dr. Krishnamurthy S L, (IIRR) Dr. Ranjit, E (IARI)	Dr. K Basavaraj(IIRR)	Dr. TB Bhagchi, (CRRI)	Ludhiana, Kapurthala, Gurdaspur, Rauni, Kaul and Karnal
Zone-V (Central-1)	Dr. Ch. Suvarna Rani (IIRR), Dr. Papa Rao V, (IIRR)	Dr. Chitra Shankar (IIRR)	Dr. Akshay S. Sakhare (IIRR)	Sakoli, Sindewahi and Parbhani
Zone V Central-2	Dr. Abdul Fiyaz R, (IIRR)	Dr.A.P Padmakumari (IIRR)	Dr. Bandeppa S. (IIRR)	Jagdapur, Raipur and Ambikapur
Zone VI Western-1	Dr.Divya B.(IIRR) Dr.Kalyani,MB (IIRR) Dr. Kutubuddin, M (CRRI)	Dr. Ch. Padmavathi (IIRR)	Dr. Sanjeeva Rao D (IIRR)	Navsari, Danti, Vyara, Dabhoi, Derol and Nawagam
Zone VI Western-2	Dr. S.V. Saiprasad (IIRR) & Dr. M.S. Anantha (IIRR)	Dr.M. S. Prasad (IIRR) Dr. Srikanth Lenka (CRRI)	--	Vadagaon, Lonavala, Karjat, Panvel, Shirgaon, Radhanagari and Goa
Zone VII (Southern 1)	Dr. Suneetha Kota (IIRR) Dr. L. Behera (CRRI)	Dr.Ladhalakshmi (IIRR) Dr. Chinna Babu Naik (IIRR)	--	Vytilla, Moncompu, Pattambi, Coimbatore and Mandya
Zone VII (Southern 2)	Dr. Jyothi Badri (IIRR)	Dr. V Prakasam (IIRR) Dr. KV Raghavendra (IIRR); Dr. S.D Mohapatra (CRRI)	Dr B Sreedevi (IIRR)	Trichy, Aduthurai, Karaikal & Kurumbapet
Zone VII (Southern 3)	Dr J Aravind Kumar (IIRR)	Dr. Y. Sirdhar (IIRR)	Dr. PC Latha (IIRR)	Gangavathi, Mugad, Sirsi, Bramavara & Ponnampet
Zone VII (Southern 4)	Dr. K. Sruthi (IIRR)	Dr. G. S. Laha (IIRR) Dr. N. Somasekhara (IIRR)	Dr. B. Sreedevi (IIRR) Dr. B. Sailaja (IIRR)	Rajendranagar, Warangal, Kunaram, Jagtial and Kampasagar
Zone VII (Southern 5)	Dr. P Senguttuvelu, (IIRR)	Dr Kannan (IIRR)	Dr. Gobinath R (IIRR)	Bapatla, Maruteru Machilipatnam, , Ragolu & Naira

Annual Progress Report 2025 Vol. I – Varietal Improvement

Zone-I (Hills)

Team Members: Dr CN Neeraja, PS & Head Biotechnology, ICAR- IIRR
Dr. Jyothi Badri, Sr. Scientist, Plant Breeding, ICAR- IIRR
Dr.V Prakasam, Sr. Scientist, Plant Pathology, ICAR-IIRR

Centres visited: Khudwani, Pombay, Larnoo and Wadura in Jammu & Kashmir;
Malan and Palampur in Himachal Pradesh (18-09-2025 to 25-09-2025)

Khudwani (1600 MSL): Funded center of Plant Breeding, Agronomy, Pathology, and Entomology. Also conducted trials of soil science voluntarily. In breeding, medium duration, early duration and japonica trials conducted. In Agronomy, nutrient responsive trial of AVT2 entries of japonica, optimizing variety and nitrogen management for DSR in temperate ecology undertaken. At Khudwani, breeding programs on blast resistance, red rice, landraces, and rice bio fortification ongoing.

Pombay (2000 MSL), : This is a voluntary center for high altitude hills. One medium duration trial, AVT2 &1 & IVT-M (H) is conducted at this center for high elevation hills.

Larnoo (2200 MSL): Voluntary center for high altitude hills. Only early duration japonica varieties are suitable for this region due to early onset of snow fall. Two trials, AVT2 &1 & IVT-M (H) and japonica trials undertaken. Breeder seed production of local checks, SR5 and SR9 are undertaken here in addition to the maintenance of japonica germplasm collections.

Wadura (1600 MSL): Voluntary center for medium altitude hills. One medium duration trial, AVT2 &1 & IVT-M (H) is conducted. MAS breeding programs for the improvement of local/traditional varieties for blast resistance undertaken.

Malan (950MSL): Funded center for Breeding, Agronomy, Pathology and Entomology. In breeding, AVT2 &1 & IVT-M (H), AVT2 &1 & IVT-E (H), *japonica* and IHRT (E) trials; agronomy, nutrient responsive trial of AVT2 entries undertaken. Maintaining Basmati germplasm, local germplasm, red rices, japonica germplasm and CMS lines. Incidence of false smut was observed in entries, 2805, 2816; neck blast was seen in 2820, 2809 and glume discoloration in 2818 in IHRT (E) trial. Entry No. 2801 is late and not suitable for IHRT (E) trial.

Palampur (1290 MSL): AVT2 &1 & IVT-E (H) is taken up. Rice dwarf virus observed at this location resulting in stunted growth and delayed or no flowering in entries 2306 and 2307.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Zone-II (North Western 1)

Team Members: Dr. A.S. Hari Prasad, PS & Head, Hybrid Rice, ICAR-IIRR
Dr. P. Jeyakumar, PS, Entomology, ICAR-IIRR
Dr. G.S. Jasudasu, Scientist, Plant Pathology, ICAR-IIRR
Dr. Prolay Kumar B., Sr. Scientist, Plant Breeding, ICAR-IARI
Dr. Milan Kumar Lal, Scientist, Plant Physiology, ICAR-CRRI

Centres visited: ICAR - IARI, New Delhi, Ludhiana, Kapurthala, Rauni, Kaul and Karnal (07.10.2025 to 15.10.2025)

ICAR-IARI, New Delhi: The trials viz., AVT&IVT BT; IHRT E & IHRT ME; DSR (HT) conducted as per the technical programme. Though the seeds of three trials viz., AVT 1 DSR; IVT DSR; AVT & IVT CR were sent, these trials were not conducted. At IARI, entry Nos.1801, 1803 identified to be segregating while, entry nos. 1804, 1805, and 1812, found to be with mixtures in AVT-1 BT & IVT-BT.

ICAR-VPKAS, Almora: All the allotted AVT 1 & IVT E (H); AVT 2, 1&IVT M (H); AVT 1 & IVT U (H) and AVT 1&IVT CR were conducted as per the technical programme. Entries 2409, 2411, 2414, 2422, 2428 in medium hill trials found to be segregating. In AVT 1 & IVT CR (Coloured Rice), majority of the entries are very late, Hill (Almora) location may not be suitable for conduct of this trial, and suggested this trial may be rejected/ not suitable for analysis.

GBPUAT, Pantnagar: All the ten trials viz., AVT 2&1 E TP; IVT E TP; AVT 2&1 ME; IVT ME; AVT 2&1 M; IVT M; IHRT E; IHRT ME; IHRT M; and AVT&IVT BT were conducted perfectly as per the technical programme. Moderate to High incidence of Asian Gall Midge & BPH pest observed. Entry 3602 in IVT IME, entries 3801, 3822, 3838 in IVT M; 1801, 1816 in AVT & IVT BT reported segregating at this location.

SKUAST-Jammu (Chatha): All the six trials viz., AVT 2&1 ME; IVT ME; AVT 2&1 M; IVT M; AVT 2&1 L; AVT 1&IVT CR conducted as per the technical programme. In AVT 2 & 1 L reported that majority of the entries didn't flower during the visit of monitoring team, suggested to be not suitable for this center.

SVPUA&T RRS Nagina: All the 15 trials viz., AVT 2&1 E TP; IVT E TP; AVT 2&1 ME; IVT ME; AVT 2&1 M; IVT M; AVT 2&1 L; IVT L; AVT 1 DSR; IVT DSR; AVT 1 & IVT AGT; AVT&IVT BT; IHRT E; IHRT ME and IHRT M trials were conducted as per guidelines.

Modipuram: AVT & IVT BT was monitored and trial was conducted as per the given technical programme.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Zone-II (North Western 2)

Team Members: Dr Krishnamurthy S L, Sr. scientist Pl. Breeding, ICAR- IIRR
Dr. K Basavaraj Scientist, Plant Pathology, ICAR-IIRR
Dr. TB Bhagchi, Sr. Scientist, Plant Physiology, CRRI
Dr. Ranjit, E., Sr. Scientist, Genetics, IARI

Centres visited: Ludhiana, Kapurthala, Gurdaspur, Rauni, Kaul and Karnal (07-10-2025 to 13-10-2025)

PAU Ludhiana: 16 of the 17 trials allotted conducted as per the guidelines. NIL and GEL trials was not conducted due to late arrival of seed. Severe False smut infestation in hybrid trials where as Bakanae was more predominant in Basmati trials. DSR and aerobic trials well conducted with proper package of practices. List of entries consisting of mixtures and segregating noted down. The screening trials viz., PHS, PHSS, PHPM and all the 4 NSN apart from NSN Basmati and NSN – NRRI taken up in the greenhouse for BPH and WBPH. Eight agronomy trials conducted.

Kapurthala and Gurdaspur: Monitored IVT Bt and AVT Bt trials. Infestation of stem borer and false smut was evident. The crop stand and expression of the entries was excellent. Also visited the fields of IPM DSR in farmer field of Amarjeet singh, Birdwal village, Patiala district.

Rauni: Monitored IVT Bt and AVT Bt trials. Overall, the crop was in good condition. Severe incidence of BPH incidence among many genotypes observed.

RARS, Kaul: All the allotted trials in breeding conducted. Overall, the crop stand in good condition. In early trials, few of the entries harvested already. Lodging observed in few entries due to heavy rain during first week of October. High incidence of stem borer observed in the entomology trial. In LFST trial, suggested to augment the infestation. All allotted trials of agronomy (5) and soil science (4) conducted as per the recommendation. Herbicide tolerant trial also conducted as per specifications. In soil science, trial on zinc formulations carried out.

CSSRI, Karnal: All the allotted trials of breeding conducted as per the recommendation. Expression of genotypes in DSR and aerobic was moderate to due late sowing. Genotypic differences in microplot for salinity, sodicity was very clear and tolerant genotypes. We monitored the IVT ST, AVT-ST, ALSTVT, IVT _DSR, AVT DSR trials. In IVT-DSR, performance was good and some line performed good under DSR.

Zone-V (Central-1)

Team Members: Dr. Chitra Shankar, PS, Entomology, ICAR-IIRR
Dr. Akshay S. Sakhare, Sr. Scientist, Plant Physiology, ICAR-IIRR
Dr. Ch. Suvarna Rani, Scientist, Plant Breeding, ICAR-IIRR
Dr. Papa Rao V, Scientist, Biotechnology, ICAR-IIRR

Centres visited: Sakoli, Sindewahi and Parbhani (13.10.2025 to 16.10.2025)

Sakoli: 14 AICRIP trials viz., AVT-2 & 1 (ETP), IVT (ETP), AVT-2 & 1 (IME), IVT (IME), AVT-2 & 1 (IM), IVT (IM), AVT-2 & 1 (Late), IVT (Late), AVT-2 & 1 (MS), IVT (MS), AVT-2 & 1 (Biofort), IVT (Biofort), IHRT-Early and IHRT (MS) were conducted. Entries lodging and with segregation and good performance noted. All the trials laid out as per the AICRIP guidelines. Blast, Bacterial Leaf Blight (BLB) observed. Five entomology trials PHS, GMS, MRST, NSN 1, GMBT conducted monitored. The trials laid out as per technical programme and

Annual Progress Report 2025 Vol. I – Varietal Improvement

observations recorded as indicated. Gall midge incidence was low while several lines exhibited distinct damage by hoppers.

Sindewahi: A total 13 AICRIP trials viz., AVT-2 & 1 (ETP), IVT (ETP), AVT-2 & 1 (IM), IVT (IM), AVT-2 & 1 (Late), IVT (Late), AVT-2 & 1 (MS), IVT (MS), IVT (Biofort), IHRT-Early, IHRT-ME, IHRT-M and IHRT (MS) were conducted as per the AICRIP guidelines. Few entries in trials were reported to be not-germinated, as informed in the station report. Blast, Bacterial Leaf Blight, and brown planthopper were the major biotic stresses recorded at this location. Overall, the trial conduct and performance of entries are good.

Parbhani: Three trials viz., AVT-2 & 1 (Aerobic), IVT (Aerobic) and IVT-DSR conducted as per the AICRIP guidelines. Due to rainfall, the stress conditions were not fully expressed; however, all the trials were well conducted and the crop stand was good. The major disease observed at this Centre was Brown Spot.

Zone V (Central-2)

Team Members: : **Dr. AP Padmakumari**, PS & Head (Ent), PI – AICRPR, ICAR-IIRR
Dr. Abdul Fiyaz R, Sr. Scientists, Plant Breeding, ICAR-IIRR
Dr. Bandeppa, Sr. Scientist, Ag. Microbiology, ICAR-IIRR

Centres visited: Jagdalpur, Raipur, Ambikapur (28-29/10/2024) & (4/11/2024 to 7/11/2024)

Jabalpur: All 17 plant-breeding trials allotted conducted and were in excellent condition, suitable for consideration in the final data analysis. Incidence of stem borer, rice gall midge and leaf folder. Eleven Entomology trials of IIRR and two trials from CRRI (72 entries of NSN1 and 286 entries of NSN2) were allotted and conducted perfectly. Four pathology trials were taken up at this location. Leaf blast and Neck blast were the target diseases in this area. Of the entries evaluated in 23 trials, none were found resistant to leaf blast. In Chhattisgarh plains, panicle mite is a problem and it was opined that Sulphur application would mitigate the problem

Raipur: Monitored 20 varietal trials and 4 hybrid rice trials at this center. All the trials were in excellent condition. A few segregants were also observed in some entries (IVT-DSR: 5902; 5909, 5911; IVT-IM: 3801, 3809; IVT-IME: 3603; IVT-ETP: 3409, 3439; IVT-Biofort: 4639, 4617, 4627, 4623). Stem borer, leaf folder, case worm major pests of this area. 13 entomology, 02 physiology trials and 13 agronomy trials conducted as per the technical programme.

Ambikapur: Plant Breeding 8 allotted trials conducted and were in excellent condition. A few segregants were also observed in some entries (IVT-ETP: 3439; IVT-IM: 3825, 3854). Conducted seven entomology trials. Major pests of this location are gall midge, yellow Stem borer and leaf folder. All the trials conducted as per the plan. Natural incidence of gall midge was very high. Planthopper damage to the extent of hopper burn observed in some of the entries in seed production plots. Requested for Soil science and Agronomy trials.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Zone VI (Western-1)

Team Members: Dr Divya Balakrishnan, Sr. Scientist (Plant Breeding, ICAR-IIRR)
Dr Ch Padmavathi, PS, Entomology, ICAR-IIRR
Dr D Sanjeeva Rao, Sr. Scientist, Biochemistry, ICAR-IIRR
Dr Kalyani M Barbadikar, Sr. Scientist, Biotechnology, ICAR-IIRR
Dr Kutubuddin M, Sr. Scientist, Biotechnology, ICAR-NRRI

Centres visited: Navsari, Danti, Vyara, Dabhoi, Derol and Nawagam (13.10.2025 to 17.10.2025)

Navasari: Nineteen breeding trials and four hybrid rice trials conducted as per guidelines. Moderate incidence of stem borer, leaf folder WBPH, BLB, sheath blight, and false smut observed in breeding trials. LNT trials are of 50% RDF and 100% RDF were conducted on same field with minimum spacing & small bunds. Eleven Entomology trials, 15 Agronomy, and 9 pathology conducted. The pest incidence was low in all the trials except in one early-planted local variety, wherein there was a hopper burn symptom.

Danti: AVT2&1-CSTVT, IVT-CSTVT, AVT2&1-ALISTTVT, IVT-CSTVT trials conducted as per recommendations. A high salinity stress (EC > 6.0) with spikelet sterility among entries observed. Heavy incidence of stem borer, and grain discoloration noticed. *Oryza coerctata* samples from the nearby fields.

Vyara: Ten breeding trials conducted. Excellent field phenotyping, drought screening, herbicide tolerance screening, large-scale crossing block and rainout shelter screening facility developed at this Centre. Moderate incidence of sheath mite, stem borer, BPH, BLB, and neck blast observed in few of the trials/entries, while in a few entries with leaf folder incidence noticed. Three Agronomy trials, one NRRI breeding trial (IVT-EDS) allotted and conducted.

Dabhoi: Four hybrid trials (IHRT-E, IHRT-M, IHRT-ME and IHRT-MS) carried out as per recommendations. Due to heavy rainfall and over maturity & poor maintenance, many entries in these trials lodged and completely damaged. Moderate incidence of BPH, and false smut observed in the hybrid entries, while in a few entries leaf folder incidence noticed.

Derol: Four breeding trials (AVT1-E-DS, IVT-E-DS, AVT1-Aerob, and IVT-Aerob) conducted as per recommendations but a large variation in flowering dates observed among the entries.

Nawagam: 16 allotted breeding and four hybrid rice trials conducted as per recommendations. IVT MS trial one replication vitiated due to submergence for more than 20 days. Due to heavy rainfall, many entries had lodged. In CR, AGT trials showed varying flowering with few entries in the booting stage. Several entries with mixture/ segregants / not purified landraces observed in the bio-fortification and CR trial. Plant hopper damage/ leaf folder damage caused complete loss of few entries in trials. Salinity trials conducted at Kansari Centre. 15 Agronomy trials, 9 entomology and pathology each were allotted and conducted High incidence of leaf folder in all the trials, resulting in 100% leaf folding and feeding, and natural incidence of sheath rot in the trials observed.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Zone VI (Western)

Team Members: Dr. S V Saiprasad, PS & Head, Plant Breeding ICAR-IIRR
Dr. M. S. Prasad, PS & Head, Plant Pathology ICAR-IIRR
Dr. M.S. Anantha, Sr. Scientist, Plant Breeding, ICAR-IIRR
Dr. Srikanth Lenka, PS, Plant Pathology, ICAR-CRRI

Centres visited: Vadagaon, Lonavala, Karjat, Panvel, Shirgaon, Radhanagari and ICAR-CCARI, Goa (14.10.2025 to 18.10.2025)

Vadagaon: Voluntary Centre. Received 10 trials Viz., AVT2&1 (IME), IVT(IME), AVT2&1(Late), IVT(Late), AVT 2&1(LPT), IVT(LPT), AVT 2&1(LNT), IVT(LNT), AVT1(DSR), IVT (DSR). All the allotted trials conducted and fields are well maintained with proper labelling.

Lonavala: This Centre is hot spot for rice blast disease. Only pathology trials allotted and conducted. All scoring observations were recorded as per the instructions from ICAR IIRR.

Karjat: 20 Plant-breeding trials allotted and all the trials are conducted and well maintained. No major pests and diseases appeared. Cooperators requested to restore Tuljapur center PI AICRPR there is considerable area under Rabi rice is being cultivated in Tuljapur area as Rabi rice area is consistently increasing. Tuljapur converts Rainfed Drill rice, hence can be restored. Good work is going on development of CMS lines and 3 line hybrids. Visited the speed breeding facility developed by the center. Visited nearby farmer's field and take the feedback about the varietal requirement.

Panvel: It is a voluntary Centre for conducting coastal salinity trials. Two trials AVT 1 – CSTVT and IVT – CSTVT allotted. ***In IVT CSTVT, all the entries died due to high salinity because of entry of saline water inside the field.*** In AVT 1 CSTVT, the trial was good with clear symptoms of salinity.

Shirgaon: It is a AICRPR voluntary Centre, seven varietal trials viz., IVT(ETP), AVT2&1 (IM), IVT (IM), AVT2&1(Late), IVT(Late), AVT 2&1(MS), IVT(MS) and two hybrid trials viz., IHRT M and IHRT MS allotted, conducted as per the guidelines. Sheath blight and case worm are major biotic stresses. Ratnagiri 8 is popular due to its good grain type (MS) and cooking quality. Ratnagiri 1 suitable for Murmu/Parched rice preparations. The soils are rich in iron and iron toxicity observed in rice field.

Radhanagari: ARS Radhanagari voluntary Centre conducted the 8 trials viz., AVT 2&1(ETP),

Annual Progress Report 2025 Vol. I – Varietal Improvement

IVT(ETP), AVT2&1 (IME), IVT(IME), AVT 2&1(MS), IVT(MS), IHRT E and IHRT ME allotted. Indrani is popular among the farmers which is having amylose content of 17% and Long slender in grain type.

ICAR-CCARI, Goa: Two AICRPR trials viz., AVT 1 – CSTVT, IVT – CSTVT. Both the trials well-established and good in Charoo Island. However, stress level was high in AVT 1 – CSTVT and some plants in sensitive entries died. ***Level of stress in IVT CSTVT was less and no much symptoms of salinity. If yield of sensitive variety is high and on par with tolerant checks, the trial may not be considered for analysis.***

Zone VII (Southern-1)

Team Members: Dr. Suneetha Kota, PS, Plant Breeding, ICAR-IIRR
Dr. Ladhalakshmi, Sr. Scientist, Plant Pathology, ICAR-IIRR
Dr. Chinna Babu Nail, Sr. Scientist, Entomology, ICAR-IIRR
Dr. L. Behera, PS, Biotechnology, ICAR-CRRI

Centres visited: Vytilla, Moncompu, Pattambi, Coimbatore and Mandya (01.11.2025 to 06.11. 2025 & 20-11-2025 -22-11-2025).

Vytilla: AL ISTVT and CSTVT trials, AICRPR NIL trial, IRRI stage 1 and Stage 2 trials being conducted. All the allotted five trials for the kharif, 2025 conducted and general crop stand was good. Agronomic trials for nutrient response trials on selected AVT2-CSTVT rice culture conducted. In IVT-CSTVT, several entries exhibited poor plant type (5004, 5011, 5016, 5017, 5018, and 5019) and sterility even under moderate stress conditions at Vytilla.

Moncompu: Ten among 11 allotted trials conducted except the Rabi trial. The crop is at flowering to physiological maturity in different trials. Severe incidence of stem borer observed in several test entries. Trial wise best performing as well segregating entries [IVT-E-TP (Entries 3440, 3411, 3460, 3456, 3403); IVT-IME (3602); (Advanced Variety Trial - DSR (5804); AVT & IVT – CR (5605, 5609, 5610, 5612, 5613, 5615 and 5626, 5602, 5603, 5606, 5616, 5622); IVT BIOFORT (4605, 4602, 4603 4607, 4628, 4639)] recorded. All the trials were conducted as per the guidelines prescribed.

Pattambi: 15 allotted varietal trials conducted. Rabi trials is not possible as the sowing at this station begins in the month of Sept-Oct itself. It is observed during monitoring that the replications of some of the trials conducted in different plots and it is suggested to them during

Annual Progress Report 2025 Vol. I – Varietal Improvement

the monitoring team visit, it conduct the trials as per the guidelines prescribed. Segregating entries in different trials recorded-AVT 1 & IVT – AGT (entries 5706, 5727, and 5739); AVT 1 & IVT CR (5614, 5624, 5619, 5622, 5632, 5602, 5637, 5635, 5634, 5604, 5606, 5613, and 5609); IVT Biofort (4647, 4649, 4604, 4613, 4601, 4602, 4623). Overall, the expression on entries in different trials is moderate to good due soils problems of high iron toxicity.

Coimbatore: 18 varietal and 4 hybrid rice trials. Trials wise performance of entries as well as segregating entries recorded. IVT –ETP (3414, 3404, 3403, 3422, 3458); IVT-IME (3605, 3622, 3651, 3603, 3639); AVT2 & 1 IM (3705, 3706, 3733); IVT –IM (3705, 3733, 3706, 3816, 3834, 3856, 3852, 3803, 3815, 3836, 3840, 3843, 3844, 3846, 3849, 3854, 3863); IVT – Late (4013, 4015, 4031, 4005, 4016, 4037, 4038, 4039, 4044, 4057, 4062) in duration trials. In special trait trials -IVT –MS (4402, 4406, 4431, 4438, 4441, 4448, 4452, 4453 and 4457); IVT- Biofort (4603, 4613, 4625, 4628, 4629, 4647, 4648); IHRT ME (2920, 2928, 2925, 2930) and IHRT Medium (3009, 3010, 3001, 3028, 3018) recorded to be segregating. Severe incidence of BPH observed in hybrid rice trials and in few varietal trials. All the trials conducted as per the guidelines prescribed and excellent expression on entries in this location.

Mandya

All the 19 varietal and four hybrids trials conducted as per guidelines prescribed. ***Overall crop stand across the trials was very good. Moderate to high incidence of blast particularly neck blast observed in the AICRIP trials.*** Majority of trials except early trials (IVT E TP and AVT 2 & 1 ETP) and DSR trials are at dough stage to physiological maturity. Segregating entries in different trials-IVT-IM (3815, 3822, 3834, 3843, 3854, 3855, 3856, 3861, 3863); IVT-IME (3603, 3604, 3618, 3627, 3628, 3639, 3651); IVT-MS (4401, 4405, 4406, 4452); IVT- Aerobic (4213, 4217, 4226, 4241, 4245, 4248, 4252, 4262, 4263); IVT-Biofort (4602 & 4610, 4611, 4603, 4617, 4618, 4619, 4620, 4621, 4624, 4625, 4630, 4631, 4639, 4645, 4647) identified. IVT-LPT and AVT2 & 1 LPT trials not conducted as informed to us that the soils in their station are high in soil phosphorous content and difficult to differentiate level of phosphorous content.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Zone VII (Southern-2)

Team Members: Dr B Sreedevi, PS, Agronomy, ICAR-IIRR
Dr. Jyothi Badri, Sr. Scientist, Plant Breeding, ICAR-IIRR
Dr. V Prakasam,, Sr. Scientist, Plant Pathology, ICAR-IIRR
Dr. KV Raghavendra, Scientist, Entomology, ICAR-IIRR
Dr. SD Mohapatra, PS & & Head, Crop Protection ICAR-CRRI

Centres visited: Trichy, Aduthurai, Karaikal & Kurumbapet (29-10-2025 (Virtual); 16-12-2025 & 20-12-2025).

Trichy:Two trials, IVT-AL&ISTVT and AVT2&1-AL&ISTVT conducted satisfactorily and adhered to the technical programme. However, majority of the entries damaged by birds. Local check, Try 3 is of late duration while most of the test entries in these trials were at grain filling to maturity. Hence, LC is not suitable for comparative performance in the promotion of entries. Minor infestations of leaf folder, stem borer and green leafhopper observed.

Aduthurai:Conduct of the trials taken up in different seasons according to suitability. Kuruvai trials at this centre were monitored virtually (28th Oct 2025). IVT-ETP, AVT1&2-ETP, IHRT-E, IVT-Wet DSR, IHRT-ME, IVT-IME, AVT1&2-IME, AVT1-DSR monitored virtually. The sowings of IM and MS trials delayed at this centre and the entries were at vegetative stage at the time of visit. In coloured rice trial, 5602 was not uniform and poor plant population in 5641 (low seedling survival due to rains). In AVT2& 1 & IVT-AGT, 5736 was not uniform. In NIL-Submergence trial, 6308, 6307, 6306 and 6301 are dwarf, early and not suitable for submergence conditions. Further, 6306 was segregating. Six AICRIP Agronomy trials conducted. Detailed records on field layout, crop growth parameters, yield attributes and weed parameters maintained as per the technical programme.

Karaikal :Although conduct of trials is without any major issues, funding is a major constraint at this centre, affecting plot size. Entries, 3620, 3636, 3658, 3602, 3652, 3616, 3613, 3619 and 3632 were segregating in IVT-IME. Poor plant population seen in 3508, 3511 and 3512. 4310 and 4303 in AVT2&1-MS, 3909 in AVT2&1-L, 4628, 4601, 4603, 4617, 4619, 4621, 4636 and 4630 in IVT-Biofort and 4016 4016 in IVT-L, were segregating. Three agronomy trials conducted.

Kurumbapet:Due to soil reclamation subsequent to previous year flood related damages, sowing extremely delayed and majority of the plant breeding trials were in nursery at the time of visit. Data from this Centre is not suitable for analysis. Further, breeder post is vacant at this Centre. Nine agronomy trials conducted including nutrient response trials.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Zone VII (Southern-3)

Team Members: **Dr. J Aravind Kumar**, PS, Plant Breeding, ICAR-IIRR
 Dr. Y Sridhar, PS, Entomology, ICAR-IIRR
 Dr. P.C. Latha, PS, Microbiology, ICAR-IIRR

Centres visited: Gangavathi, Mugad, Sirsi, Bramavara & Ponnampet). (06-11-2025 to 13-11-2025).

Gangavathi, Mugad, Sirsi, Bramavara & Ponnampet:

Overall, the conduct of plant breeding trials was satisfactory. This zone received heavy rainfall during the kharif season which resulted in lodging damage of the crop and in some centres, re-sowing was taken up. Especially, Bramavara received more than 5000 mm of rainfall. Mixtures, segregating lines and reduced plant stand commonly observed across different centres. The team also visited seed production plots in Gangavathi, Mugad and Bramavara. Incidence of brown spot was very heavy in all the trials at Ponnampet. Further, reduced plant stand and lodging observed in Mugad.

Crop production trials conducted systematically at Gangavathi. It reported that ARS Gagavathi does not possess the ideal conditions to conduct CSTVT trial and Brahmapara suggested as a possible alternative. Among different water management treatments, visually AWD plot was better; under puddle, seeding crops was at early maturity. Crop protection trials were conducted at Gangavathi, Mugad, Bramavara and Ponnampet. Planthopper population pressure was moderate whereas, stem borer and gall midge incidence was high at Gangavathi. At Mugad, disease development was low due to delayed sowing. The gundhi bug incidence was at outbreak level at Bramavara. In disease management trial at Ponnampet the fungicide, Nativo was performing better. NSN hills experiment replanted due to wild boar damage at Ponnampet.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Zone VII (Southern-4)

Team Members: Dr. B. Sreedevi, PS, Agronomy, ICAR-IIRR
Dr. G. S. Laha, PS, Pl. Pathology, ICAR-IIRR
Dr. N. Somasekhar, PS, Nematology, ICAR-IIRR
Dr. B. Sailaja, PS, Computer Applications, ICAR-IIRR,
Dr. K. Sruthi, Scientist, Plant Breeding, ICAR-IIRR.

Centres visited: Rajendranagar, Warangal, Kunaram, Jagtial and Kampasagar

Rudrur: Two of four allotted **breeding trials** conducted. Non-receipt of seed for AVT-2 ETP and Biofort trials. In IVT-ETP, gall midge was the major constraint, affecting ~25% of entries (with ~14% showing very high damage), followed by moderate to severe stem borer incidence. The station expressed interest in conducting DSR trials. Two pathology trials were allotted—one conducted during Kharif and the other planned for Rabi 2026. Severe bacterial blight (BB) incidence was observed in several farmers' fields in the region and also in some experimental plots at the station.

Warangal: Total 20 trials (16 varietal and 4 hybrid trials) monitored. BLB emerged as the major constraint, affecting 40–70% of entries in most of the trials, while only 20–35% remained disease-free. Lodging occurred in 10–25% of entries across trials, and off types/segregation were common, ranging from 10–30%, especially in IVT-IME, IVT-MS, and CR trials. DSR trials (AVT-2 & 1 and IVT) were sown very late due to continuous rains, and the trial is not yet properly established. Eleven of the 12 allotted entomology trials were conducted. Five agronomy trials were conducted as per the technical programme.

Kunaram: All 5 ETP/IME/NILs trials conducted as per the technical programme and showed wide variability in performance with severe pest–disease pressure. The IVT-ETP-64 trial exhibited high levels of segregation/off-types (~22%), grain discolouration (~31%), sheath blight (~19%), and moderate lodging, with a small subset (~19%) showing good performance. In IVT-IME-64, off-types (~19%), lodging (~9%), stem borer and neck blast (~14–16%). The AVT-2&1-NILs trial faced the most severe biotic stress, with very high GM infestation (~84%), minor BLB/SB incidence.

Jagtial: Four allotted trials (AVT-2 ETP, IVT-ETP-64, AVT-2-IM-17 and IVT-IM) were conducted as per the technical programme. IVT-IM showed higher segregation but still retained a sizeable proportion of acceptable entries. All seven entomology trials allotted for this Centre were conducted as per the technical program.

ARI, Rajendranagar: 14 breeding trials were monitored covering first to third-year performance of entries in IME, IM, Late, MS, Biofort, NILs, AGT, and DSR trials. IVT-IME and IVT-IM trials exhibited higher segregation, off-types, and maturity variation, though a few promising lines were identified. Late-duration trials faced challenges due to late or very-late maturity and non-flowering in some entries. Biofortified and NILs trials showed wide variability, with limited stable lines because of poor germination or irregular flowering. Six agronomy trials were conducted as per the technical programme. All the Six agronomy, 13 entomology trials and 16 Plant Pathology trials including 3 collaborative trials with Entomology and Agronomy allotted were conducted as per the technical program.

Kampasagar: Total 7 trials were monitored. In the AVT-2 ETP & IVT-ETP trial, several entries

Annual Progress Report 2025 Vol. I – Varietal Improvement

were severely affected by stem borer (SB), sheath rot, and false smut, poor population or no germination. The IVT-IME trial was highly variable, with SB, sheath rot, FS, blast, BLB, offtypes (5–30%), and poor populations in many entries, but a subset of lines showed promising growth and yield. The AVT & IVT-CR trial also showed segregation, variable phenology, pest/disease stress, and 5–50% offtypes.

Zone VII (Southern 5)

Team Members: **Dr Kannan PS**, Plant Pathology, ICAR- IIRR
 Dr P Senguttuvelu, PS, Hybrid Rice, ICAR-IIRR
 Dr. Gobinath R, Scientist, Soil Science ICAR-IIRR

Centres visited: Maruteru, Machilipatnam and Bapatla, (10-11-2025 to 12-11-2025)

Maruteru: Twenty-seven trials (23 varietal & 4 hybrid trials) were allotted. All the trials were conducted successfully. Few entries across trials were lodged owing to rains and some due to drone damage. All the trials maintained the plot size and design as instructed by ICAR-IIRR.

Machilipatnam: Two AVT- 2 & 1 CSTVT; IVT-CSTVT trials were allotted. Due to high temperature immediately after transplanting plant survival % in the trial was poor, resulting in poor crop stand.

Bapatla

Four trials were allotted and all the trials are well conducted following the technical program with proper replications. Mixtures were observed in 5101, 5109, 5104, 5121, 5131, entries in AVT 1-2 /NIL-GEL, while lodging was observed in 5601, 5602, 5615, 5622, 5631, 5636, 5637. Incidence of blast, false smut and leaf folder observed.

PROGRESS REPORT
***KHARIF 2025* VARIETAL**
IMPROVEMENT

AICRPR

RAINFED TRIALS

ICAR-CRRI, Cuttack

SUMMARY

AICRPR- Rainfed Varietal Improvement Trials *kharif* 2025 RAINFED UPLAND ECOSYSTEM

Early Direct seeded trial

AVT-1-EDS and IVT-EDS trials were conducted with 21 and 54 test entries, respectively in rainfed early direct seeded condition.

AVT 1- E DS:

In AVT1, a total 12 entries including one hybrid and two NILs were tested in 16 locations. The hybrid was in the second year and the near isogenic lines (NILs) were in first year of testing as repeat entries. Among the purelines, one entry was in third year of testing and rest eight were in second year. The NIL entries had the national check Sahbhagidhan as their recurrent parent.

Promoter entries:

- **IET 32077 (R)** promoted to AVT-2 in Zone-VII
- **NIL entry: IET 33259 (R)** promoted to AVT-2 for Zone V, VI, VII

Promising entries: Nil

IVT- E DS: In IVT-EDS, 54 entries were evaluated in 17 locations. The following genotype were promoted to AVT-1.

Overall basis: IET 34115.

Trait verification trial for drought tolerance (AVT-1-NIL-Drought) was constituted with 6 entries and tested in 12 locations.

RAINFED LOWLAND ECOSYSTEM

During *Kharif* 2025, rainfed lowland trials were evaluated under rainfed shallow lowland (RSL), semi deep water (SDW) and deep water (DW) ecologies and also in direct seeded condition under late (IVT-R-DS-L) and medium (IVT-R-DS-M) duration group. A total of 212 test entries were evaluated along with suitable checks in five trials namely AVT1 -RSL (17 test entries), IVT - RSL (56 test entries), IVT-SDW (35 test entries), IVT-DW (8 test entries), IVT-R-DS-L (39 test entries) and IVT-R-DS-M (57 test entries).

Trait verification trial for submergence tolerance (AVT-1- NIL-Sub) was also conducted in 8 locations with 3 test entries.

Rainfed Shallow Lowland AVT 1-RSL

Out Of 17 test entries (13 inbred, 4 NIL entries) along with 4 recurrent parents and 4 checks were evaluated across 3 zones (III, IV, VII) in 13 locations. Eleven entries, including 9 inbreds and 2 NILs were in 2nd year of testing and 2 NIL entries were in 1st year of testing.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Promising entries

IET 32175: Promising in Zones VII

IET 31237: Promising in Zones VII

NIL entry: IET 33262 (Submergence tolerant): promising for Bihar

Promotion to AVT-2-RSL:

Entries promoted to third year of testing (from AVT1-RSL to AVT2-RSL):

- Zone III: Nil
- Zone IV: IET32150 (R)
- Zone V: IET 33150, IET 33159, IET 32134(R)
- Zone VII: IET 33150, IET 33123, IET 33125, IET 33127, IET 33159, IET 32134(R)

NILs entries promoted:

- IET 32264 (BPH tolerant) **repeat in AVT-2** as NIL and RP recorded moderate tolerance
- IET 34116 (submergence tolerant) **repeat in AVT-2** in Odisha

IVT-RSL:

In IVT-RSL, 56 test entries along with 4 checks were evaluated across 14 locations. The following entries are promoted to AVT-1-RSL.

Promoted to AVT-1 RSL based on zonal basis:

- Zone IV- IET 34147

IVT-RSL-DS-L:

This trial was constituted with 39 test entries and 5 checks for 9 locations. Four entries were the 2nd year of testing and among entries of 1st year of testing, one was NIL and another one was hybrid entry.

Entries qualified for promotion from AVT-1 to AVT-2

- IET 33257 – for Zone V

NIL entry qualified for promotion to AVT-2

- IET 34271 (Herbicide tolerant)- for Zone III, IV and VII

Entries qualified for promotion to AVT-1

- Zone III – IET 34281
- Zone IV –IET 34286, IET 34303
- Zone V – Nil
- Zone VII – Nil
- Overall – Nil

IVT-RSL-DS-M:

This trial was constituted with 57 test entries including 2 hybrid entries and 5 checks in only 10 locations. Three entries were in 2nd year (AVT-1) of testing.

Entry promoted to AVT-2-R-DS-M

Nil

Entry promoted to AVT-1- R-DS-M

- Zone III – Nil
- Zone IV - IET 34222, IET 34236, IET 34249, IET 34263 and IET 34267
- Zone V - IET 34223 and IET 34262
- Zone VII- Nil
- Overall – IET 34262

Annual Progress Report 2025 Vol. I – Varietal Improvement

Semi Deep- and Deep-Water ecology

IVT-SDW:

A total 35 test entries (including 2 NIL entries) all were in the 1st year of testing along with 4 checks were tested over 9 locations in Zone III, IV and VII.

The following entry is promoted to the AVT-2-SDW:

➤ **Nil**

Entries promoted to AVT-1-SDW

➤ **Zone - VII : IETs 34177, 34178, 34195 and 34200**

IVT-DW:

In IVT-DW trial 8 test entries along with 3 checks were tested under the 1st year of testing in 3 locations

Promoted to AVT-1: **Nil**

AVT 2 & 1 - Early direct seeded (AVT 2 & 1 - E DS), Kharif 2025

Test Locations: 16

Test Entries: 12

Normal rainfall locations: 09 (Data considered: 08, Data not considered: 01); **Moderate drought locations:** 05; **Severe drought locations:** 02 (Data considered: 01, Data not considered: 01)

Checks included in the trial: 9

National Checks: Sahbhagidhan and Vandana

Zonal Checks: Anjali (all zones), Govind (Northern), Narendradhan97 (Eastern), Samaleshwari (Central), Varalu (Western) and Tulasi (Southern)

Hybrid check: US-314

Local checks: One in each location.

Drought sensitive checks (Recurrent parents): IR 64, Anjali

Drought tolerant NIL Checks (NILs of sensitive checks): CR Dhan 804 (NIL of IR64) and CR Dhan 808 (NIL of Anjali)

Total 12 entries including nine purelines, one hybrid and two NILs along with two national checks for all zone, one zonal check (Anjali) for all, one zone specific Zonal check for each zone, two sensitive checks (which also includes one zonal check Anjali), two drought-tolerant NILs (CR Dhan 804 and CR Dhan 808) of the sensitive checks, one hybrid check and one local check for each location were tested in AVT1-EDS of *Kharif* 2025. Among the purelines, one entry was in third year of testing and rest eight were in second year. One pureline is under repeat testing among them. The hybrid was in the second year and the near isogenic lines (NILs) were in first year of testing as repeat entries. The NIL entries have the national check Sahbhagidhan as their recurrent parent. The entries were tested in 16 locations, out of which data from two locations, RPCAU, Pusa Bihar and Derol, Gujarat were not considered for analysis due to low (<5.0%) and High CV (>40%), respectively. In remaining 14 locations, normal rainfall was recorded in 08 locations, whereas 05 locations were categorized as moderate drought affected areas and 01 location was categorized as severe drought affected area with data which is suitable for analysis.

The range of various parameters across the zones is presented in the following table.

Moderate drought			
Zones	III	VI	VII
Zonal mean (kg/ha)	1674 (IET 33108)-3243(IET 33260 (R))	830 (ZC)-2986 (IET 32087 (R))	1686 (CR Dhan 808)-4220 (32077 (R))

General information on drought spell in different locations AVT 1 & 2- E DS, Kharif, 2025

Sl. No	Location	Experimental Grain Yield (Kg/ha)	Dry Spell	Drought Situation
Zone-III				
1.	Jeypore	3872	No dry spell	Normal rainfall
2.	Cuttack	2357	Three Dry spells	Moderate drought
3.	Pusa	4044	Three Dry spells	Normal rainfall
4.	Hathwara	4344	One dry spell	Normal
5.	Hazaribagh	1156	One dry spell during reproductive stage	Severe drought
6.	Garhkhatanga	2277	No dry spell	Moderate drought
Zone-IV				
7.	Arundhutinagar	5037	No dry spell	Normal rainfall
Zone-V				
8.	Jabalpur	5038	Three Dry spells	Normal rainfall
9.	Rewa	3001	Two Dry spells	Normal
10.	Jagadapur	4046	No dry spell	Normal rainfall
11.	Raipur	3132.35	No dry spell	Normal rainfall

Annual Progress Report 2025 Vol. I – Varietal Improvement

Sl. No	Location	Experimental Grain Yield (Kg/ha)	Dry Spell	Drought Situation
Zone-VI				
12.	Parbhani	2346	3 dry spells	Moderate drought
13.	Derol	1165	One dry spell	Severe drought
14.	Vyara	2158	-	Moderate drought
Zone-VII				
15.	Coimbatore	2549	-	Moderate drought
16.	Mugad	3676	No dry spell	Normal rainfall

Performance of entry in 3rd year of testing: The genotype IET 32100 didn't show superior yield over best varietal check (BVC) at any zone for drought situations and hence not considered further for identification as a promising genotype. Under normal rainfall, it showed at-par performance in Zone-II and Zone-VII, whereas it was inferior at Zone-IV and Zone-V and overall basis. Under moderate drought, it showed at-par performance in all the zones as compared to BVC. Under severe drought, it showed inferior performance compared to BVC.

Performance of entries in 2nd year of testing: Out of eight lines in second year of testing, five genotypes didn't show superior performance under drought situations at any zone. IET 32077 showed at-par performance under normal rainfall in Zone-III, IV and superior performance in Zone-VII. Under moderate drought, it showed superior performance Zone-VII and overall basis, but at-par in Zone-III. There was no moderate drought location in Zone-IV. Its grain quality parameters also met the required standards. Hence the genotype was considered for promotion in IV and VII. One entry IET 33100 showed superior performance under moderate drought in Zone-VII and at-par performance under normal rainfall. However, due to low HRR, it was not considered for promotion.

Performance of hybrid entry in 2nd year of testing:

The only hybrid entry IET 32087 showed superior yield performance over the hybrid check (US-314) at all zones. Moreover, the genotype showed superior yield performance at Zone-III, Zone-VII and overall basis under normal rainfall compared with best varietal check. Under moderate drought, it showed superior performance in Zone-VI and VII. However, due to low HRR in all the three testings carried out in two laboratories (range 43.60-48.0), the genotype was not considered for further promotion.

Performance of entries under severe drought: Only the entry IET 33260 showed inferior performance compared to the best check Sahbhagidhan under severe drought. All the other entries showed significantly inferior performance under severe drought.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Performance of the entries in AVT 2&1-E DS trial during Kharif, 2025 for grain yield across zones, different drought regimes and grain quality parameters

Annual Progress Report 2025 Vol. I – Varietal Improvement

Performance of IET 32100 over three years

Situations	Performance of IET 32100 over three years			
	IVT (2023)	AVT 1&2 (2024)	AVT 1&2 (2025)	Remarks
Normal rainfall	At-par (Zone V)	At-par (Zone III, V, VII)	At-par (Zone-III and VII)	Not promising for any zone as doesn't meet the minimum criteria of superior performance under moderate drought in a single zone for at least two years.
Moderate drought	Not-superior	Superior (Zone III and overall) Zone V: No data	At-par (Zone-III, VI and VII)	
Severe drought	Superior (Zone V)	Zone VI (Inferior to BVC-local check)	Inferior (Zone III)	
Remarks	Promoted as IVT (B)	Promoted to AVT2 for Zone- III and Zone- V	Not superior at any zone	

Performance of NIL entries: Two entries, IET 33259 and IET 33260 are near isogenic lines of popular variety Sahbhagidhan introgressed with *Pi9* gene. Compared to recurrent parent, the genotype IET 33260 showed superior yield performance under both moderate and severe drought in Zone-III. It also showed superior performance under moderate drought at Zone-VII and overall basis, and at-par performance under normal rainfall in Zone-V and under moderate rainfall in Zone-VI. It showed better resistance reaction to blast disease compared to recurrent parent. However, it showed low HRR value. Another entry IET 33259 showed superior performance under moderate drought in Zone-VII and at-par performance in Zone-III, VI and overall basis. In Zone-V, it showed at-par performance under normal rainfall, besides Zone-VII. It also showed better resistance reaction to blast disease compared to recurrent parent. Grain quality was at-par with the recurrent parent. Based on overall performance, IET 33259 is considered for promotion in Zone V, VI and VII. All these zones are area of adaptation of recurrent parent Sahbhagidhan as per breeder seed indent.

Performance of the NIL entries in AVT 1 & 2- EDS trial during *Kharif*, 2025 for grain yield across zones, drought regimes, blast disease reactions and grain quality parameters

INITIAL VARIETY TRIAL - EARLY DIRECT SEEDED (IVT - EDS)

Locations: 17

Test Entries: 54

National checks: Sahbhagidhan and Vandana

Sensitive check: IR64

Zonal check for all zones: Anjali

Varietal checks: CR Dhan 804, CR Dhan 808

Zonal Check: Govind (Northern-II), Narendra 97(Eastern-III&IV), Samaleshwari (Central-V), Varalu (Western-VI) and Tulasi (Southern-VII) & Anjali (All zones)

Hybrid check: US 314

Local checks

Normal Condition: (11)

Zone III: Hathwada, West Bengal; Pusa, Bihar; Ranchi, Jharkhand and, Gorakhpur, Uttar Pradesh

Zone IV: Medziphema, Nagaland

Zone V: Jagdalpur and Raipur Chattisgarh; Jabalpur, Madhya Pradesh

Zone VI: Vyara, Gujarat

Zone VII: Coimbatore, Tamil Nadu and Mugad, Karnataka

Moderate Drought: (06)

Zone III: Cuttack and Jeypore, Odisha & Garhkhatanga, Jharkhand

Zone V: Rewa, Madhya Pradesh

Zone VI: Parbhani Maharashtra & Derol, Gujarat

Under IVT-EDS trial, 54 test entries were evaluated with nine checks during kharif-2025 (Table1). The trial was laid out across seventeen locations representing zone-III, VI, V, VI and VII. F-statistics was not significant for the locations Hathwada and Jagdalpur whereas, CV% were beyond the considerable limits for Pusa (low, 3.31%) and Medziphema (low, 2.8%). Therefore, data from only thirteen locations were considered for the analysis out of which seven were categorized under normal, and six were categorized under moderate drought conditions, based on the period of dry spells as well as yield during the period of crop growth. The seven locations under normal condition include Ranchi and Gorakhpur (Zone III); Raipur and Jabalpur (Zone V); Vyara (Zone VI) & Coimbatore and Mugdal (Zone VII). The six locations under moderated drought include Cuttack, Jeypore and Garhkhatanga (Zone III), Rewa (Zone V) Parbhani and Derol (Zone VI). Thirteen locations were considered for data interpretation.

None of the test locations were categorized as severe drought condition and therefore, the genotypes were identified only for the IVT (A) category, as defined in the 'Criteria for promotion/ promising entry identification in Early direct seeded trial' (Proceedings of meeting for promotion and release in problem prone ecologies under rainfed and irrigated conditions dated 16.05.2024).

As no hybrid test entries were there, the performance of the hybrid check US 314 was not considered for comparison.

Annual Progress Report 2025 Vol. I – Varietal Improvement

The range of various parameters across the zones is presented in the following table.

Moderate drought			
Zones	III	V	VI
Zonal mean (kg/ha)	1675 (IET 34108)- 3366 (IET34092)	560 (IET 34074)- 4030(IET 34088)	1144 (ZC)- 3409 (IET 34073)

Zone wise performance of entries under normal and moderate drought condittion

Zone-III (Normal): The trial was laid out at four locations in the zone under normal condition. The data from Hathwada (West Bengal) & Pusa (Bihar) were not considered for the analysis due to non-significant F-statistics and CV% beyond considerable limit, respectively. Data from two locations, Ranchi (Jharkhand) & Gorakhpur (Uttar Pradesh) were considered for the analysis. Performance of the hybrid check was best, followed by the performance of CR Dhan 808. Therefore CR Dhan 808 with grain yield 5053kg/ha, 100cm plant height and 85DFF was considered as the BVC for the zone.

The entries IETs 34106 (5664kg/ha grain yield, 76DFF, 102cm plant height) and 34067 (5657kg/ha, 74DFF and 98cm plant height) showed significantly higher yield than CR Dhan 808 (BVC) while the entries, IETs 34099, 34071, 34080, 34114 and 34108 displayed at par performance with the BVC.

The mean yield in the zone is 3812.38 kg/ ha, mean days to fifty percent flowering is 82 days and the mean plant height is 99.53cm. Entries IETs 34063, 34076, 34083, 34094, 34103 and 34105 displayed DFF>90 days both in the zone and on overall basis under normal condition and were not considered further.

Zone-III (Moderate Drought): Three locations in the zone, Cuttack, Jeypore (Odisha) and Garhkhatanga (Jahrkhand) were observed to experience moderate drought. The mean yield at the locations was found to be below 3000kg/ ha and therefore, the locations were categorized as moderate drought locations. The mean yield for the zone is 2402.26kg/ha, with 88 DFF and mean height of 95.46cm. The variety CR Dhan 804 outperformed all other check varieties with 3365kg/ha grain yield, 89 days DFF and 89cm plant height and considered as the BVC. As none of the test entries could significantly outperform the BVC, hence not promoted in the zone.

Zone IV (Normal): The trial was at single location in the zone. However, due to lower CV% than the permissible limit, the data was not considered for further analysis.

ZoneV (Normal): The trial was laid out at three locations in the zone under normal condition. The data from Raipur (Chattisgarh) and Jabalpur (M.P.) was utilized for analysis while the data from Jagdalpur (M.P.) revealed non-significant F-Statistics and therefore was not considered for analysis. The performance of IR64 (sensitive check) was superior to all other check varieties with mean grain of 5112kg/ha, mean DFF of 76 days and mean plant height of 81cm and therefore considered for comparison of test entries. The mean grain yield for the zone is 4368.94kg/ha, mean DFF being 83days and mean plant height is 86.95cm.

Entries that significantly outperformed the BVC included 34110 (6908kg/ha, 87DFF&86cmplant height), 34094 (6850kg/ha, 94DFF &82cm plant height), 34113 (6300kg/ha, 88DFF & 87cm plant height), 34068 (6224kg/ha, 87DFF &91cm plant height), 34090 (5873kg/ha, 98DFF & 87cm plant height) and 34091 (5712kg/ha, 92DFF & 82cm plant height). The entries IETs 34092, 34098, 34087 (5623kg/ha, 82DFF & 102cm plant height), 34115 (5593kg/ha, 80DFF & 96cm plant height) and 34109 (5392kg/ha, 84DFF & 83cm plant height) performed at par with BVC.

Entries with DFF>90 include IETs 34115 (96), 34112(101), 34108 (94), 34104 (100), 34100 (92), 34098 (100), 34088 (97), 34087 (102), 34086(102), 34082(98), 34081 (95), 34079 (104), 34078(91), 34074 (91), 34072 (99) and 34071 (98). The mean DFF of local checks and check for all zones Anjali was> 90days in the zone; therefore, all the entries were considered.

Zone V (Moderate Drought): Rewa (M.P.) was the only location categorized under moderate drought under this zone. The mean yield was 2522.22kg/ha for the location. The mean DFF was

80 days while the mean plant height was 98.89cm. National check variety, Sahbhagidhan was considered as the BVC with yield of 3930kg/ha, 85 days DFF and 100cm plant height. None of the entries significantly outperformed the BVC, hence not promoted in the zone.

Zone VI (Normal): Vyara (Gujrat) was the only location categorized under normal condition for the zone and the data was considered for analysis. National check Sahbhagidhan was found to be the BVC in the trial (4542kg/ha, 82 days DFF and 124cm plant height). The mean yield for the location is 4368.94kg/ha with a mean DFF of 82 days and a mean plant height of 124.18cm. None of the entries were found to be significantly better than the BVC while the entries, IETs 34070, 34110, 34094, 34075 and 34107 displayed at par performance w.r.t. the BVC.

The entries, IETs 34071 (93), 34072 (100), 34074 (109), 34082 (94), 34088 (94), 34090 (109) and 34100 (93) displayed DFF > 90 days in the zone. The entries, IETs 34072 (92), 34074 (95), 34088 (92) and 34090 (95) displayed DFF > 90 days in the zone as well as on overall basis under normal condition and therefore were not considered for further comparison.

Zone VI (Moderate Drought): Two locations in the zone, Parbhani (Maharashtra) and Derol (Gujrat) were observed to experience moderate drought. The mean yield for the zone under moderate drought was 2180.11kg/ha. The mean performance of the Local check varieties was considered as the BVC (mean yield 2501kg/ha, 91 DFF and 99 cm plant height) for the zone. The entries IET 34073 (3409kg/ha, 84 DFF and 77cm), IET 34097 (3219kg/ha, 79 DFF and 78cm), IET 34109 (3214kg/ha, 83 DFF and 71cm), IET 34111 (3170kg/ha, 82 DFF and 76cm) and IET 34084 (3063kg/ha, 82 DFF and 62cm) significantly outperformed the BVC whereas, IET 34115, 34114, 34091 and 34077 performed at par with the BVC. None of these entries could perform at least at par with the BVC under normal condition, hence not promoted in the zone.

The entries, IETs 34072, 34078, 34087, 34093 and 34104 showed DFF > 90 days and therefore not considered.

Zone VII (Normal): The trial was laid out at two locations in the zone under normal condition. The data from both Coimbatore (Tamil Nadu) and Mugad (Karnataka) were utilized for analysis. None of the entries displayed significantly higher yield than the mean performance of the zonal check Tulasi, the BVC for the zone (4421kg/ha, DFF 93 days and plant height of 87cm). The entries, IETs 34088, 34068, 374082, 34079, 34115, 34062, 34108 and 34069 displayed at par performance with the BVC.

The mean performance of the varieties in the zone is 3614.58 kg/ha, mean DFF is 85 days, and the mean plant height is 77.33cm. Among the at par performing entries, IET no. 34088 (95) displayed DFF > 90 days.

Overall (Normal): On overall basis under normal condition, the mean yield was found to be 3839.54kg/ha with mean DFF of 83 days and mean plant height was 93.17cm. The mean performance of the Hybrid check US-314 was found to be best followed by the zonal check (4155kg/ha, 88 DAF and 100cm plant height) under different zones under normal condition. Mean performance of the zonal check was considered as the BVC for comparing the performance of the test entries. The entries, IETs 34110, 34068, 34115, 34113 and 34071 significantly outperformed the BVC while IETs 34114, 34100, 34087 and 34094 performed at par with the BVC.

The entries IETs 34072 (92), 34074 (95), 34086 (91), 34088 (95), 34090 (95) and 34094 (97) displayed DFF > 90 days and more than all the check varieties in the zone and therefore are not considered further.

Overall (Moderate drought):

Overall basis the mean yield under moderate drought locations is 2348.20kg/ha, with mean DFF of 85 days and mean plant height of 90.64cm. The mean performance of Sahbhagidhan (2923kg/ha, DFF 80 days and 94cm plant height) was best among the checks and therefore was considered as BVC for comparison. The test entries, IETs 34073 (3223kg/ha, DFF 86 and plant height 94cm) and 34115 (3209kg/ha, DFF 84 days and plant height 93cm) significantly outperformed the BVC while the entries IETs 34092, 34109, 34088, 34097, 34091 and 34107 performed at par with the BVC.

The entries that recorded DFF>90 days on overall basis under moderate drought include, IETs 34072 (94), 34074 (97), 34082 (91), 34088 (94), 34091(91), 34096 (92), 34100 (93) and 34110 (92) and therefore not considered further.

As IET 34115 outperformed BVC under both normal and moderate conditions, hence is promoted to AVT1 on overall basis, under IVT (A) category.

Promotion of entries

- **Promoted on zonal mean basis:**

Zone III: Nil

Zone V: Nil

Zone VI: Nil

- **Promoted on overall mean basis: IET 34115**

**ADVANCE VARIETY TRIAL 2&1-RAINFED SHALLOW LOWLAND
(AVT 2 & 1-RSL)**

Locations: 13

Test Entries: 17

Checks: Swarna-Sub1 (National), Zonal checks: Pooja (Eastern), Bahadur (North Eastern), Savitri (Southern); Swarna (Central), CR Dhan 801 (yield check) and Local Check

Advanced Variety Trial 2 & 1-Rainfed Shallow Lowland (AVT2&1-RSL), *Kharif*, 2025 was constituted with 25 entries (13 inbred and 04 NIL entries, 04 recipient parents of corresponding NILs and 04 checks viz., National check (Swarna-Sub1), Zonal check (Pooja for Eastern zone, Bahadur for North eastern zone and Savitri for Southern zone Swarna for central zone), yield check (CR Dhan 801) and a local check. Out of the 17 test entries, four were in the 3rd year of testing i.e., IET 31220, 32175, 31246 and IET 31237 (R). Eleven entries, including 09 inbreds and 02 NILs were in 2nd year of testing and 02 NIL entries were in 1st year of testing. The trial was sent across 15 locations in Zone III, IV, V and VII, with data successfully received from 13 locations. The trial could not be carried out at Arundhatinagar due to unavailability of land, while at Sabaur it was damaged by flood. Additionally, data from Karimganj were excluded from the analysis due to low CV. The range of various parameters across the zones is presented in the following table.

Zones	III	IV	V	VII
Zonal mean (kg/ha)	4048 (IET32150R)- 5534 (IET31246)	3443 (IET33264)- 6049 (IET32150R)	4480 (NC)- 5677 (IET33159)	3795 (IET32150R)- 7214 (IET33127)

DNI (@)	-	KMJ (CV%): 2.29	-	-
Locations considered	07	02	01	02

@DNI-Data not considered due to low/high CV or low experimental mean yield or non-significant F value

Among the entries that completed three years of testing, three entries, IET 33150, IET 33127, and IET 31246 recorded the requisite yield superiority over the best varietal check (NC), their performance over the three years is presented in the table. Among the entries in the second year of testing, seven entries, IET 33150, IET 33127, IET 32150 (R), IET 33159, IET 32134 (R), IET 33125, and IET 33123 recorded requisite yield superiority.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Performance of the entries with required significant yield superiority over checks in AVT 2 & 1- RSL during Kharif 2025

Three-year (2022 to 2025) performance of the entries in AVT2-RSL ecology: Three out of four entries completed three years of testing with required significant yield advantage in the third year of testing over the checks. Yield performance along with ranks across three years in various zones for all the four entries in the third year of testing in 2025 in AVT 2 & 1, IVT-RSL trial is given in the following table.

Thee-years (2022 to 2025) performance of the entries in RSL ecology

IET No	Year	III	IV	V	VII	Remarks
32175/ OR 2437-16	2025	-	-	-	5995 (9)*	Promising in Zones VII,
	2024	-	-	-	5795 (1)*	
	2023	-	6235 (9)	-	5843 (1)*	
31246/ BRR 2141	2025	-	-	-	6348 (4)*	Superior in Zone VII in AVT-2
	2024	-	-	-	5508 (1)	
	2023	5248 (1)	5300 (8)	-	-	
31237(R)/ BRR 0222-IR93339:39-B-6-5-B-B-B-47	2025	-	-	-	5981 (8)*	Promising in Zones VII
	2024	5757 (3)	5110 (7)	-	4653 (5)*	
	2023	-	6016 (2)*	-	-	
	2022	5642 (3)*	-	-	-	

Performance of NIL entries during Kharif, 2025

The 2nd year NIL, IET 33262 (BRR0298) recorded yield superiority over RP (Sabaur Shree) under yield and submergence trial with statistically superior survivability during 2024 and 2025 in Bihar, and also had requisite grain quality parameters, thus promising. Besides, 2nd year NIL, IET33264 (CR 4696-2-15-32-82) also recorded at par yield with RP (Pooja) in Zone V along with standard grain quality parameters, however under trait verification it is found moderate BPH tolerant, thus, repeated. First year NIL, IET 34116 (CR 6550) recorded at par yield with RP (Pratikshya) in yield and submergence trials, however, trait was not verified, thus dropped.

SUMMARY

ADVANCE VARIETY TRIAL 2& 1-RSL (AVT 2& 1 - RSL)

Locations: 12

Test entries: 17

Checks: Swarna-Sub1 (National), Zonal checks: Pooja (Eastern), Bahadur (North Eastern), Savitri (Southern); Swarna (Central), CR Dhan 801 (yield check) and Local Check

List of the entries performed superior in AVT2-RSL:

- IET 31246 (BRR 2141): Superior in Zone VII in AVT-2
- IET 32175 (OR 2437-16): promising in Zones VII
- IET 31237(R) (BRR 0222-IR93339:39-B-6-5-B-B-B-47): promising in Zones VII
- Entries promoted to third year of testing (from AVT1-RSL to AVT2-RSL): seven (07)
- Zone III: None
- Zone IV: IET32150 (R)
- Zone V: IET 33150, IET 33159, IET 32134(R)
- Zone VII: IET 33150, IET 33123, IET 33125, IET 33127, IET 33159, IET 32134(R)
- NILs entries promoted:
- IET 33262 (submergence tolerant) promising in Bihar

Annual Progress Report 2025 Vol. I – Varietal Improvement

- IET 32264 (BPH tolerant) repeated as NIL and RP recorded moderate tolerance
- IET 34116 (submergence tolerant) repeated in Odisha

INITIAL VARIETY TRIAL-RAINFED SHALLOW LOWLAND (IVT-RSL)

Locations: 14

Test Entries: 56

Checks: Swarna-Sub1 (National), Yield Check (CR Dhan 801), Zonal checks: Pooja (Eastern), Bahadur (North Eastern), Savitri (Southern), Swarna (Central) and Local Check

The trial was constituted with 60 entries including four checks viz., National (Swarna Sub1), Zonal (Pooja, Bahadur, Savitri, Swarna), Yield Check (CR Dhan 801) and local checks (Table 4.1). The trial was sent to 14 locations. Data were received from 13 locations except Sabour which was reported to be damaged due to flood. Eleven locations were considered for data analysis. Other three locations were not considered for data analysis due to low CV% of Karimganj (2.65) and low mean yield of Ghaghraghat (1543.88 kg/ha) and high CV (40.42).

The analyzed data of trial was evaluated at 11 locations viz. Bhubaneswar, Cuttack, Chinsura, Bankura, Bikramganj, Masodha, Titabar, Lembucherra, Jabalpur, Ponnampet, and Mugad. Experimental mean yield at the locations ranged from 1544 kg/ha (Ghaghraghat) to 5523 kg/ha (Cuttack) and CV % ranged from 6.20 (Ponnampet) to 15.76 (Masodha). Mean yield of the entries ranged from 3382 kg/ha (IET 34170) to 5414 kg/ha (IET 34147); days to 50% flowering ranged from 103 days (IET 34148) to 123 days (IET 34122); plant height ranged from 86 cm (IET 34122) to 128 cm (IET 34119) and panicles per square meter ranged from 251 (IET 34165) to 305 (IET 34126). The data pertaining to yield, days to 50% flowering, plant height and number of panicles/m² are presented in Tables 4.2-4.5.

The range of various parameters across the zones is presented in the following table.

Zones	III	IV	V	VII
Zonal mean (kg/ha)	3748.98 (IET 34166)- 5481.75 (IET 34141)	3117.42 (IET 34170)- 7161.87 (IET 34147)	2445.96 (IET 34168) - 6270.64 (IET 34122)	3344.68 (IET 34131) - 5280.08 (IET 34160)

Annual Progress Report 2025 Vol. I – Varietal Improvement

Performance of entries

In Zone III, Zone V and Zone VII no entry is found significantly superior to the best varietal check.

Zone-IV was represented by three locations (Titabar, Karimganj, Lembucherra) spread across two states Assam and Tripura. The mean grain yield of the entries in Zone IV varied from 3117 kg/ha (IET 34170) to 7162 kg/ha (IET 34147), days to 50% flowering ranged from 95 days (IET 34171) to 120 days (IET 34164), plant height ranged from 81 cm (IET 34170) to 149 cm (IET 34147) and mean panicles/m² varied from 221 (IET 34171) to 317 (IET 34132). Among the test entries, IET 34147 (7162 kg/ha) with 114 days to 50% flowering recorded significant yield superiority over the best check (BVC + CD at 5%). Therefore, this entry (IET 34147) is promoted to AVT-1 under Zone IV.

Zonal performance of promising entry in IVT-RSL, 2025

INITIAL VARIETY TRIAL-SEMI DEEP WATER (IVT-SDW)**Locations: 12****Test Entries: 35**

Checks: CR Dhan 506 –National check;
 CR Dhan 510 (Eastern & North Eastern) and MTU
 1172 (Southern) – Zonal check; and local check

Initial Variety Trial –Semi-Deep Water (IVT-SDW) was constituted with 35 test entries and 3 checks viz., CR Dhan 506 (National check); CR Dhan 510 (Eastern & North Eastern- Zonal check) and MTU 1172 (Southern-Zonal check) and local check. The trial was sent to 12 locations and data was received from 12 centres. The trial was not conducted at Arundhatinagar due to lack of land. Data from three centres were excluded from analysis viz., Ghagharaghat due to low experimental mean; Pusa and Karimganj due to low CV. The range of various parameters across the zones is presented in the following table.

Parameters of the entries across the zones in IVT – SDW, Kharif 2025

Zones	III	IV	VII
Zonal mean (kg/ha)	2469 (IET 34180) – 5039 (IET 34194)	1607 (IET 34197) – 6451 (IET 34177)	3122 (IET 34181) – 5941 (IET 34177)
Exp Mean (kg/ha)	2639 (BBN)-5027 (CHN)	4175(GER)- 4965(TTB)	4218 (MTU)-4404 (MGD)
CV%	11.42 (CHN) - 28.59 (CNG)	7.90 (TTB)-12.51 (GER)	8.98 (MGD) – 19.46 (MTU)
DFF	109 (IETs 34179, 34180) – 128 (IET 34199)	94 (IET 34180) – 129 (IET 34200)	94 (IET 34197) – 120 (CR Dhan 506, NC)
PH (cm)	110 (IET 34180) – 159 (IET 34187)	106 (IET 34174) – 164 (IET 34187)	88 (IET 34196) – 144 (IET 34193)

Annual Progress Report 2025 Vol. I – Varietal Improvement

None of the entries found significantly superior than the best check in Zone III and Zone IV.

In Zone VII four entries (IETs 34177, 34178, 34195 and 34200) recorded significant yield advantage over the BC. Hence these four entries are promoted to second year of testing.

Performance of the entries with the required significant yield superiority over checks in IVT - SDW during Kharif 2025

INITIAL VARIETY TRIAL - DEEP WATER (IVT - DW)

Locations : 2

Test Entries : 8

Checks : CR Dhan 500 (National check), CR Dhan 502 (Zonal check) and local check (Sabita/CR Dhan 512)

Initial varietal trial for deep water condition (IVT-DW) was constituted with 8 test entries and 3 checks (Trial no. 7). All the 8 test entries were in the first year of testing. The trial was sent to 3 locations for evaluation and the data was received from all 3 locations. The information related to adaptability parameters such as seedling survival (%), submergence tolerance (%), elongation ability score, kneeing ability score, grain shattering score and phenotypic acceptability score were recorded. The data on yield, days to 50% flowering, plant height and number of panicles/m² of test entries in initial varietal trial for deep water conducted during kharif 2025 is provided in Tables 7.2-7.5

The range of various parameters across the zones is presented in the following table.

Zones	III
Zonal mean (kg/ha)	4423.99 (LC)- 5922.8 (IET 34214)
Exp Mean (kg/ha)	4914.09 (CTK)-5484.39 (CHN)
CV%	9.16 (CTK)-11.65 (CHN)
DFF	112.88 (IET 34215)-142.88 (ZC)
PH (cm)	120.4 (IET 34215)-168.73 (NC)
Pan/m ²	214.5 (IET 34215) 304.43 (IET 34209)
Locations considered	2

On overall basis, the experimental mean yield ranged from 4432 kg/ha (IET 34209) to 5923 kg/ha (IET 34214) and days to 50% flowering from 114 days (IET 34209) to 143 days (ZC CR Dhan 502) among test entries. The plant height of test entries ranged from 120 cm (IET 34215) to 169 cm (CR Dhan 500, National check) and number of panicles/m² ranged from 215 (IET 34215) to 304 (IET 34209).

Though all the test entry except the test entry IET 34209, IET 34210 performed significantly better than local but no entry found to perform better than the best varietal check (BVC + CD). So of all these entries on the overall basis in Zone III was not promising considering the best varietal check (BVC + CD).

Entries promoted to AVT-1

**ADVANCED & INITIAL VARIETAL TRIAL – RAINFED DIRECT SEEDED –
MEDIUM DURATION (AVT 1 &-IVT-R-DS-M)**

Location: 13

Test Entries: 57

Checks: DRR Dhan 42, CR Dhan 804, CR Dhan 312, CR Dhan 704 (Hybrid check) and Local check

Direct Seeded Rice (DSR) cultivation is an age-old practice in rainfed medium land in plateau region comprising the states of Jharkhand, Chattisgarh, Odisha, M.P., U.P. and parts of West Bengal. It is estimated to have around 2.5 – 3.0 million hectare rice area is under Direct Seeded Rice of medium duration in medium land situation, in such land usually broadcasting of paddy seeds is done either with sprouted or unsprouted seeds at the beginning of monsoonal rain. Sometimes line sowing with seed drill is done behind the furrow at a distance of 15-20 cm between row and 5-10 cm within row. Generally, variety with 115-130 maturity duration are preferred.

DSR is gaining popularity in recent years due to escalating cost of production, unavailability of labourer for transplanting, change in rainfall pattern and uncertainty in adequate rainfall due to climate change. Availability of potent pre and post emergence herbicide that effectively control weeds and of course availability of suitable varieties that adapt well to DSR cultivation with comparatively better yield are some of the factors that are responsible for its popularity. The direct seeded medium duration rice varieties have several advantages that making them important choice for sustainable agriculture like water conservation and suitable technology for water scares areas. A labour saving and climate resilient technology suit well to aberrant climate change and water scarcity with a comparatively stable yield. DSR also reduces methane emission unlike transplanted rice where 10-15 cm water level is maintained. In DSR efficient nutrient management is possible due to no water stagnation in the field. To perform better under DSR condition, a variety should have key traits like early vigour, anaerobic germination, weed competitiveness, comparatively deeper root system, nutrient use efficient with stable yield. This trial aims at identifying culture that perform better under DSR situation.

This trial i.e. AVT 1 & IVT-Rainfed Direct seeded- Mid duration (AVT 1 & IVT-R-DS-M) was constituted with 57 test entries and 5 checks out of which one was local check (Table 8.1). The other checks were DRR Dhan 42 (Check 1), CR Dhan 804 (Check 2) and CR Dhan 312 (Check 3) and CR Dhan 704 (hybrid check). Three entries IET 33216, 33202, 33204 were in the 2nd year of testing (AVT-1). The trial was sent to 15 test locations out of which in 13 locations trials were conducted and the data were received from 11 test locations. The trial failed at Hazaribagh due to continuous rain at the beginning of the season; Sikkim due to cold stress. Besides, the data from Jeypore for low plot size (1.89 sq m) was not considered in final reporting.

The range of various parameters across the zones is presented in the following table.

Zones	III	IV	V	VII
Zonal mean (kg/ha)	2480 (IET 34266)- 4925 (IET 33204)	2629 (IET 34266)- 5307 (IET 34249)	2715 (IET 34254)- 9415 (IET 34223)	3393 (IET 34234)- 5841 (CR Dhan 312)

Locations considered	5	2	1	2

Based on the results of the qualified locations the report is prepared for various zones. The studied traits such as grain yield (kg/ha), days to 50% flowering duration (days), plant height (cm) and panicles/m² (no.), grain quality are presented in Table 8.2-8.6.

Performance of the entries in AVT-1 R-DS-M (2nd year of testing), Kharif 2025

No entry in the 2nd year of testing was found significantly superior than the best check in any zone and also on overall basis. Hence, none promoted to the AVT-2.

Performance of the entries in IVT- R-DS-M (1st year of testing), Kharif 2025

On overall basis from 10 qualified test locations, grain yield in kg/ha ranged from 3076 (IET 34266) to 4886 (IET 34262) with a mean of 4122 kg/ha; days to 50% flowering varied from 81 (CR Dhan 804) to 102 (IET 34243, IET 34224) with a mean of 96 days; plant height ranged from 86 cm (IET 34266) to 117 cm (IET 34230) with a mean of 101 cm and panicles/m² varied from 241 (IET 34269) to 310 (IET 34243) with an average of 275 numbers.

IET 34262 (CR 3993-33-52-13-3-1) was found significantly superior to the best check DRR Dhan 42. IET 34262 was derived from a cross CR 1009 /O. *brachyantha*//CR 1009. This entry was ranked 1st on overall basis with a mean grain yield of 4886 kg/ha with 97 days to 50% flowering and 111 cm plant height. This entry is promoted on overall basis.

In zone III and Zone VII, no entry was found significantly superior to the best check (DRR Dhan 42). Hence, no promotions.

In Zone IV, the mean grain yield varied from 2629 kg/ha (IET 34266) to 5307 kg/ha (IET 34249). IET 34249 (CR 4635-1-1-1-1) stood 1st in this zone. It was derived from the cross CR Dhan 316/CR 4338-98-2-2. It outperformed the best check with a grain yield of 5307 kg/ha with days to 50% flowering of 90 and plant height of 113 cm. All together 5 entries were found significantly superior to the best check (DRR Dhan 42). All these entries, IET 34222, IET 34236, IET 34249, IET 34263 and IET 34267 are promoted to the 2nd year of testing.

In zone V, mean grain yield varied from 4105 kg/ha (IET 34256) to 9415 kg/ha (IET 34223). Two entries, IET 34223 and IET 34262 performed significantly superior than the best check CR Dhan 312 (7854 kg/ha). IET 34223 derived from the cross IR 20/Dandi, stood first with mean grain yield of 9415 kg/ha with 106 days to 50% flowering and 89 cm plant height.

ADVANCED & INITIAL VARIETAL TRIAL – RAINFED DIRECT SEEDED – LATE DURATION (AVT 1 &-IVT-R-DS-L)

Locations: 09

Entries: 39

Checks: Swarna Sub1, Swarna, CR Dhan 802, CR Dhan 702 (Hybrid check) and Local check

The Initial Varietal Trial under rainfed direct-seeded conditions for late-maturing varieties was conducted with the objective of identifying suitable entries for lowland ecosystems, where late-maturity cultivars are preferred. Direct-seeded rice (DSR) addresses several challenges in modern agriculture by eliminating the labor-intensive processes of nursery raising and transplanting. Additionally, it reduces overall resource use in rice cultivation by removing the need for nursery preparation and transplanting operations.

The trial comprised four second-year testing entries, one near-isogenic line (NIL) in its first year of testing, and 34 newly nominated entries in their first year, along with standard checks (Table 9.1). Swarna Sub1 and CR Dhan 802 were used as national checks (NCs), while CR Dhan 702 served as the hybrid check, in addition to local checks. Swarna was included as the recurrent parent check for comparison with the NIL entry.

The trial was initially conducted across nine locations: Jeypore, Bikramganj, Hatwara, and Masodha in Zone III; Titabar in Zone IV; Jabalpur in Zone V; and Ragolu, Maruteru, and Mugad in Zone VII.

However, data from Hatwara and Mugad were excluded from further analysis due to non-significant F-statistics at the 5% level. Similarly, the coefficient of variation (CV) at Ragolu was 3.61, which fell below the acceptable threshold; therefore, this location was also excluded. Ultimately, data from six locations were retained for the final analysis of entry performance.

The coefficient of variation (CV) across the six qualified locations ranged from 6.16 at Titabar to 20.33 at Masodha. The experimental mean grain yield varied considerably, from 2010 kg/ha at Jeypore to 5531 kg/ha at Jabalpur.

Across locations, the overall mean grain yield of entries ranged from 2408 kg/ha (IET 34924) to 4717 kg/ha (IET 34304). Days to 50% flowering varied from 90 days (IET 34275) to 113 days (IET 34282), while plant height ranged from 84 cm (IET 34282) to 118 cm (IET 34297). The number of panicles per square meter ranged from 219 (IET 34285) to 281 (IET 34274) (Table 9.2).

Detailed data on grain yield, days to 50% flowering, plant height, number of panicles, and grain quality attributes of the entries are presented in Tables 9.3, 9.4, 9.5, and 9.6, respectively.

Annual Progress Report 2025 Vol. I – Varietal Improvement

The range of various parameters across the zones is presented in the following table.

Zones	III	IV	V	VII
Zonal mean (kg/ha)	1367 (IET 34282) 4246 (IET 34281)	2613 (IET 34301) 6394 (IET 34295)	2520 (IET 33242) 9225 (IET 33257)	2575 (IET 34296) 7025 (CR Dhan 702 (Hybrid Check))

Locations considered	3	1	1	1

Performance of the entries in AVT-1 R-DS-L, Kharif 2025

Among the four entries under second-year testing, IET 33257 (CR 4205-226-52-50-7-1), derived from CR Dhan 307 / *O. longistaminata*, exhibited significantly superior performance compared to the best varietal check in both Zone IV and Zone V. In Zone IV, the entry recorded an average grain yield of 6282 kg/ha, reached 50% flowering in 86 days, produced 255 panicles per m², and attained a plant height of 133 cm. In Zone V, IET 33257 yielded 9225 kg/ha, flowered in 99 days, produced 309 panicles per m², and reached a plant height of 84 cm. However, it is important to note that both zones were represented by only one testing location each. The quality parameters including HRR (56%) and amylose content (26.51%) are within the threshold limits (Table 9.6). Based on its superior performance, this entry may be considered for promotion to AVT-2 testing.

Performance of NIL entry in IVT-R-DS-L, Kharif 2025

The trial included one near-isogenic line (NIL), IET 34271 (CR 4700-28-4-11-6-#), evaluated in its first year of testing and compared with recurrent parent check, Swarna. Overall, the grain yield performance of the NIL entry was significantly lower than the recurrent parent. The performance of NIL entry was *at par* with the recurrent parent in Zone III, Zone IV and Zone VII. However, the entry exhibited slightly higher grain yield than Swarna at specific locations, namely Masodha (2839 kg/ha compared to 2314 kg/ha of the recurrent parent) and Maruteru (5425 kg/ha compared to 5400 kg/ha of the recurrent parent). Across locations, the NIL entry flowered in 104 days, later than the recurrent parent, which flowered in 101 days. It produced 275 panicles per m² compared to 236 panicles per m² in Swarna, and attained a plant height of 90 cm, which was comparable to the 91 cm height of the recurrent parent.

The trait confirmation trial (AVT-1 NIL-HT trial) conducted in five centers (Cuttack, Coimbatore, Naira, Chinsura and Nagina,) out of which the data of four centers (Cuttack, Coimbatore, Nagina and Naira) was not qualified for further analysis. The data from Chinsura center suggest that the NIL entry IET 34271 outperformed recurrent parent Swarna and tolerant check (Robin). Thus, this confirms the suitability of entry for herbicide tolerance. Hence, promoted to AVT-2 in Zone III, IV and VII.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Performance of entries in IVT-R-DS-L, kharif 2025

On an overall basis, the entry IET 34304 was found to be significantly superior to the best varietal check, recording a mean grain yield of 4717 kg/ha. It attained 50% flowering in 94 days, produced 246 panicles per m², and reached a plant height of 111 cm. However, the entry did not show significant superiority over the best check in any individual zone. Since entry flowered too early compared to checks, it is shifted to IVT-R-DS-M trial in the upcoming year.

In Zone III, the entry IET 34281, derived from CR 1009 / *O. brachyantha* // CR 1009, performed significantly better than the best varietal check. It recorded an average grain yield of 4246 kg/ha, with a plant height of 104 cm, reached 50% flowering in 104 days, and produced 367 panicles per m². Based on its superior performance in Zone III, this entry is promoted to AVT-1.

Zone IV was represented by a single evaluation location at Titabar. The entries IET 34276, IET 34286, IET 34291, IET 34295, and IET 34303 performed significantly better than the best varietal check. Among these, IET 34295 recorded the highest average grain yield of 6394 kg/ha, reached 50% flowering in 90 days, attained a plant height of 134 cm, and produced 268 panicles per m². This was followed by IET 34276, which yielded 6057 kg/ha, flowered in 86 days, reached a height of 135 cm, and produced 274 panicles per m². The entry IET 34286 also outperformed the best check, with an average yield of 5842 kg/ha, 263 panicles per m², 90 days to flowering, and a plant height of 124 cm. Further, IET 34291 recorded a yield of 5838 kg/ha, with a plant height of 109 cm, 255 panicles per m², and 88 days to flowering. Similarly, IET 34303 yielded 5814 kg/ha, attained a plant height of 124 cm, produced 239 panicles per m², and flowered in 91 days. Since entries IET 34276, IET 34291 and IET 34295 flowered too early compared to checks, these entries are shifted to IVT-R-DS-M trial in the upcoming year. Based on the superior performance of entries IET 34286 and IET 34303, these entries are recommended for promotion to AVT-1.

In Zone VII, none of the entries outperformed the best varietal check; therefore, no entries are recommended for promotion from this zone.

Entries qualified for promotion from AVT-1 to AVT-2

IET 33257 – for Zone V

NIL entry qualified for promotion to AVT-2

IET 34271- for Zone III, IV and VII

Entries qualified for promotion to AVT-1

ADVANCE VARIETY TRIAL 1- NIL (SUBMERGENCE)
(AVT 1-NIL SUB)

Locations	:	08	Test Entries: 03
Entries	:	NILs: 03; RPs: 03; Sensitive check: 02; Tolerant check:02	
Checks/	:	RP: Sabour Shree, Pratikshya, CO 51	
Recurrent/		Swarna sub1 & Savitri sub1 (Tolerant checks)	
Donor		Swarna & MTU 1010 (Sensitive checks)	
Parents			

This trial includes 03 NILs along with their respective recurrent parents (03). The NILs derived from Sabour Shree (IET 33262) were in the second year of testing. The NILs derived from Pratikshya (IET 34116) and CO 51 (IET 34306) were in the first year of testing.

The data pertaining to yield, days to 50% flowering, plant height, panicles/m² are presented in tables 63.2 to 63.5

Yield performance of entries under normal condition:

The entries of AVT1-NIL-Submergence were tested for their yield performance under normal condition in the trials of their respective ecologies.

Trait verification:

The trial was sent to eight locations. The trial was not conducted at Arundhatinagar due to non-availability of suitable land. The trial was completely damaged at Sabour. The data from Gorakhpur was not considered as there was no submergence stress (only 30 cm of water depth was maintained). The data from Masodha was not considered for analysis as the seedling survival percentage of sensitive checks (MTU 1010, Swarna) were higher than tolerant checks (Swarna Sub1, Savitri Sub 1). The data from Maruteru was not considered due to low seedling survivability of tolerant checks (Swarna Sub1, Savitri Sub 1). The data from Aduturai was not considered for analysis due to low CV% (4.70) and also the seedling survival percentage of sensitive check (MTU 1010) was higher than tolerant checks (Swarna Sub1, Savitri Sub 1). Hence, data received from Cuttack and Bikramganj was only considered for analysis.

Based on mean yield under submergence stress condition during *Kharif* 2025, the NIL (IET 33262) derived from Sabour Shree were found to be significantly superior to the recurrent parent, Sabour Shree for yield under submergence. With respect to mean seedling survival percentage under submergence stress, the NIL derived from Sabour Shree performed better than recurrent parent and both the sensitive checks, hence trait verified.

The NIL (IET 34306) derived from CO 51 were found to be significantly superior to recurrent parent for yield under submergence. The mean seedling survival percentage of this NIL under submergence stress was also significantly superior than its recurrent parent and both the sensitive checks, hence trait verified

The mean yield under submergence stress condition of the NIL (IET 34116) derived from Pratikshya was at par with its recurrent parent. The seedling survival percentage of NIL derived from Pratikshya (IET 34116) under submergence stress was significantly superior than both the sensitive checks, but at par with the recurrent parent (Pratikshya), hence trait not verified.

Summary of two years' performance of entries found promising in AVT-1 NIL-Submergence

The NIL derived from Sabour Shree (IET 33262) performed significantly better for grain yield under submergence stress than the recurrent parent in 2024 and 2025. The seedling survival percentage under submergence was better than its recurrent parent in both the years. Hence the NIL of Sabour Shree (IET 33262) was found to be promising under submergence stress.

Grain yield (Kg/ha) of NIL entries in AVT-1 NIL- SUB along with their recurrent parents under submergence stress condition, *Kharif*, 2025

Annual Progress Report 2025 Vol. I – Varietal Improvement

ADVANCE VARIETY TRIAL 1-NEAR ISOGENIC LINES-DROUGHT (AVT1-NIL-DRT)

Locations: 12

Test Entries: 06

Checks:

Sahbhagidhan – Tolerant Check

Vandana – National Check

Anjali– National Check; **CR Dhan 808** – Corresponding tolerant NIL Check 2

IR64 – Sensitive Check; **CR Dhan 804** – Corresponding tolerant NIL Check 1

Swarna-Sub1: Sensitive Check; **CR Dhan 802** – Corresponding tolerant NIL Check 3

Recurrent Parents: IR64, Samba Mahsuri/ DRR Dhan 50, Improved White Ponni

Advance variety trial 1-NIL (drought) was conducted across 12 locations (Four zones: Zone III, IV, V and VII) to evaluate the performance of 06 nominated drought tolerant near isogenic lines (NILs) in comparison to the three recurrent parents (RP). Besides standard national checks Vandana and Sahbhagidhan, three sets of droughts tolerant near isogenic lines of IR64, Anjali and Swarna-Sub1 with varying maturity durations were used as checks to verify stress situations at different locations and growth stages.

Data of seven centers (Ranchi, Bikramganj, Arundhatinagar, Jabalpur, Vyara, Coimbatore and Mugad) were not considered as there were no dry spells reported from the locations or the average yield were high indicating no stress on genotypes. Cuttack location was not considered as F value at 5% level is non-significant. The locations with at least one dry spell, low average yield of trial and significant differences in yield levels for at least one tolerant NIL check and its corresponding sensitive recurrent parent were considered for analysis. Finally, data from Jeypore, Hazaribagh, Raipur and Rewa were considered for further analysis. Trait verification was carried out based on overall performance across locations.

Criteria for selection or rejection of trial locations:

Trial Location	Number of dry spells	Average yield (Kg/ha)	Classification
Zone III			
Jeypore	1	3132	Considered as drought location
Cuttack	1	3919	Location not considered as F value at 5% level is non-significant
Ranchi	Nil	3633	Not considered as drought location. There was no dry spell
Hazaribagh	1	2345	Considered as drought location
Bikramganj	Nil	5086	Not considered as there was no dry spell
Zone IV			
Arundhatinagar	Nil	4883	Not considered as there was no dry spell
Zone V			
Rewa	2	2693	Considered as drought location
Jabalpur	4	5151	Not considered as average trial yield is high
Raipur	1	2770	Considered as drought location

Annual Progress Report 2025 Vol. I – Varietal Improvement

Trial Location	Number of dry spells	Average yield (Kg/ha)	Classification
Zone VI			
Vyara	Nil	373	Not considered as drought location. There was no dry spell.
Zone VII			
Coimbatore	Nil	1298	Not considered as drought location. There was no dry spell.
Mugad	Nil	4196	Not considered as drought location. There was no dry spell.

Table 64.1: Composition of entries in Advance Variety Trial 1- Near Isogenic Lines- Drought (AVT 1-NIL DRT), Kharif 2025

6416	Improved White Ponni (RP)				105
6417	CR Dhan 802 (Tolerant NIL Check 3)				

Performance of NIL entries: Among the NILs tested for drought tolerance, only the entry IET 33266 was superior to its recurrent parent IR64 at all the drought stress locations and on overall basis. Another NIL of IR64 (IET 31286) was inferior to the recurrent parent. The NIL of Improved White Ponni (RP) was inferior to recurrent parent under drought stress. All the three NILs of Sambha Mahsuri (IET 32981, 34308 and 34309) were inferior or at-par with Sambha

Annual Progress Report 2025 Vol. I – Varietal Improvement

Mahsuri. DRR Dhan 50 was also inferior to Sambha Mahsuri. IET 34308 was inferior and IET 34309 were at-par with DRR Dhan 50. IET 32981 was superior to DRR Dhan-50, but at-par with Sambha Mahsuri.

AICRP (Rice) Monitoring Report, 2025

The monitoring reports of the AICRPR centers under Zone III and Zone IV are given below.

Monitoring Team-1: The team comprised of three scientists. Dr. J. Meher, Pr. Scientist (Genetics and Plant Breeding) and Dr. Anjani Kumar, Sr. Scientist (Soil Science) from ICAR-CRRI, and Dr. M.S. Anantha, Sr. Scientist (Genetics and Plant Breeding) from ICAR-IIRR monitored all the trials from Bihar during 1.11.2025 to 6.11.2025. At RPCAU, Pusa, Bihar, total 14 trials were conducted. IVT-EDS and AVT 2&1-EDS trials were harvested before monitoring. All the trials were conducted as per guidelines and layouts. At BAU, Sabour Bihar, total 18 trials were conducted. The AVT 2&1 – RSL, IVT -RSL and AVT 1-NIL Sub trials were damaged due to flood water inundation. Rest of the trials were conducted as per guidelines and layouts. At BAU- Botanical Research Sub Station, Bikramganj, Rohtas, Bihar, AVT 2-NIL Submergence trial was not conducted properly as there were less water stagnation and high rate of survival of checks and RPs. The different trials were conducted in a larger plot but not as per the lay out given for randomization. AT ICAR Res. Complex for Eastern Region, Patna, Bihar, four trials were conducted (AVT 2&1 -ETP, IVT-ETP, AVT 2 & 1 -Aerob and IVT – Aerob.). Trials were at maturity stage and ready for harvesting. All the trials were conducted as per guidelines and layouts in large plots.

Fig. 1: Monitoring of trials at different testing centers of Bihar under AICRP (Rice) during Kharif 2025

Monitoring Team-2: The team comprised of four scientists from ICAR-CRRI which included Dr. M. Chakraborti, Sr. Scientist (Genetics and Plant Breeding); Dr. N.P. Mandal, Pr. Scientist (Genetics and Plant Breeding); Dr. A. Poonam, Pr. Scientist (Agronomy) and Dr. S. Bhagat, Pr. Scientist (Plant Pathology). All trials of Jharkhand and two districts of West Bengal were covered. At BAU, Ranchi, Jharkhand, a total of 25 plant breeding, 07 Agronomy, 06 Plant Pathology, 06 Entomology, 01 Soil Science and 01 Plant Physiology trials were conducted. All trials were conducted as conducted as per guidelines and layouts. ICAR-IIAB, Garhkhatanga, Ranchi, two trials (IVT-EDS and AVT 2 & 1-EDS) were conducted. Both trials were conducted systematically. However, heavy incidences of neck blast were recorded. At ICAR-CRRI-CRURRS, Hazaribagh, Total Five breeding trials were conducted. Two Agronomy and one Soil Science trials couldn't be carried out due to heavy rain. All the trials were conducted as per guidelines. At Rice Research Station, Hathwara, Purulia, West Bengal; out of 11 trials allotted to centre, 10 trials were conducted. Only one trial was not possible to conduct due to wash out of seedbed by heavy rains. All the 10 trials were conducted as per guidelines and layouts. At Rice Research Station, Bankura, 11 trials were conducted as per guidelines and layouts.

Fig. 2: Monitoring of trials at different testing centers of Jharkhand and two districts of West Bengal under AICRP (Rice) during *Kharif* 2025

Monitoring Team-3: The team comprised of four scientists from ICAR-CRRI which included 1. Dr. R. L. Verma, Sr. Scientist (Genetics and Plant Breeding), Dr. M.K. Bag, Pr. Scientist (Plant Pathology) and Mr. Amit Kumar Dash, Scientist (Soil Science). The team monitored five locations of eastern Uttar Pradesh. At BHU, Varanasi, Total 31 trials (16-breeding, 11-agronomy, and 04 plant pathology trials) were sent to the centre and all the trials were conducted. Trials were conducted as per guidelines and layouts. At ANDUAT, Masodha, Ayodhya, the center was allotted with total 28 breeding trials and all are conducted as per recommendation of AICRPR. Plant Pathology trials NSN-1, NSN-2, NHSN, and DSN along with NSN1 from CRRI for rainfed trials were conducted. Entomology trials on NSN against insect pests, leaf folder screening nursery (LFST) and multiple resistance screening nursery (MRST) were conducted. ANDUAT, Ghagrahat, Ayodhya, AVT1-RSL, IVT-RSL, IVT-SDW and IVT-DW trials were conducted as per guidelines and layouts. Optimum plot size and requisite water regimes were maintained in all the breeding trials. At ICAR-CSSRI, Regional station, Lucknow, AVT2 & 1 AL&ISTVT, IVT-AL & ISTVT, AVT1-DSR and IVT-DSR trials were conducted. All trials were conducted as per guidelines and layouts. Optimum plot sizes were maintained. At CRC, Gorakhpur, Total 10 breeding trials were conducted and the trials were conducted as per guidelines and layouts. Optimum plot sizes were maintained.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Monitoring Team-4: The AICRIP monitoring across Cuttack, Bhubaneswar, Chiplima, and Jeypore was carried out by a scientific delegation including Dr. S.K. Dash, Dr. Reshmi Raj K.R., Dr. Sushmita Munda, and Dr. Raghu S. In ICAR-CRRI, Cuttack 41 breeding were assigned, but two could not be conducted. The crop condition was good and plots were maintained properly. The major disease observed was bacterial leaf blight, grain discoloration and major insect pests were stem borer. The team visited the trials at OUAT, Bhubaneswar and monitored 04 rainfed and 08 irrigated breeding trials. All the trials were conducted as per the guidelines of AICRIP. High infection of brown spot and bacterial leaf blight was observed in several entries. Grain discoloration and shoot borer infestation was also observed in most of the trials. In OUAT, Chiplima center, 17 breeding trials were assigned, however 7 trials were not conducted. The team visited the trials at OUAT, Jeypore center and monitored 05 rainfed and 14 irrigated trials. The trials were conducted as per the AICRIP guidelines. The major disease observed were false smut and bacterial leaf blight and major insect pests were stem borer.

Fig. 4: Monitoring of trials at different testing centers of eastern Odisha under AICRP (Rice) during *Kharif* 2025

Monitoring team 5: The team monitored AICRP (Rice) trials of Assam and Meghalaya. The team comprised of four members including Dr. K Chattopadhyay, Pr. Scientist (Genetics and Plant Breeding), Dr. K Chakraborty, Sr. Scientist (Plant Physiology) and Dr. K Saikia, Pr. Scientist (Entomology). In Gerua, Assam twelve breeding trials and 2 Entomology trials were conducted satisfactorily. ICAR Research Complex for NEH Region, Barapani conducted two breeding trials, namely IVT U(H) and AVT-2 & IVT M(H) which was found satisfactory. But heavy infestation of false-smut was observed. CAU at Umiam, Meghalaya also conducted these two trials. Bird and rat damages were noticed. In Upper Shillong team monitored 2 Plant Breeding, 3 Agronomy and 5 Plant Pathology trials. One Plant Breeding trial, AVT 1& IVT-U (H) could not be conducted by the center due to damage of seedlings at seed bed for unseasoned rain. In AAU-Assam Rice Research Institute, Titabar team monitored 21 trials of Plant Breeding, 6 trials of Plant Physiology, 9 trials of Agronomy, 11 trials of Entomology, 7 trials of Soil Science and 8 trials of Plant Pathology and found satisfactory. Two Breeding trials, namely AVT1-J (H) due to no germination and IVT-DSR due to lack of suitable land could not be conducted in this center.

Annual Progress Report 2025 Vol. I – Varietal Improvement

Fig. 5: Monitoring of AICRP (Rice) trials in Assam and Meghalaya during *Kharif* 2025

Monitoring Team-6: The monitoring team, consisting of Dr. Rameswar Prasad Sah, Dr. Rubina Khanam, and Dr. Rupak Jena, visited Chinsurah, West Bengal. They monitored 17 breeding trials, agronomy, soil science, 2 physiology, 12 pathology, a14 entomology trials at Chinsurah. However, some trials could not be monitored, including the early maturity trial conducted at Hatwara, the CSTVT trial at Gosaba, and the AGT trial, which was not received by the center.

Fig. 6. Monitoring of AICRP (Rice) trials at Chinsurah during *Kharif* 2025

Monitoring Team-7: A team comprising Dr. Arup Mukherjee and Dr. Sutapa Sarkar from the ICAR-CRRI, Cuttack visited RC NEH Tripura Centre for monitoring AICRP trials in North-East-2 Zone-IV, for visiting locations including Lembuchera, Lamaphelpat, Arundhatinagar, and Medziphema. The scientists reviewed experimental data and assessed crop performance to ensure protocol adherence. Sixteen trials were allocated to the centre. Dr. Rahul Kumar Scientist, Plant Breeding conducted the trials. The team monitored all the trials, laid out at Dakshin Bagma, Udaipur, Gomati Tripura on 06.11.2025. All the trials were in good condition and most of them were in grain filling stage. Only one trial, AVT -1&2 J failed due to no/poor germination. The AICRP trials conducted by Tripura State Agriculture University were visited and all the trials were conducted successfully.

Annual Progress Report 2025 Vol. I – Varietal Improvement

ICAR-RCNEH Manipur Centre, Lamphelpat

After reaching Imphal on 8th November, 2025 the monitoring of the trials conducted in ICAR-RCNEH Manipur Centre, Lamphelpat. The trials were conducted by Dr. Sarika Konsam, Scientist Plant breeding at the centre. The centre conducted three trials within the campus. In AVT and IVT- Coloured Rice trial: entry no.s 5603, 5606, 5613, 5624, 5631 and 5635 had white grain colour. In AVT 2 & 1 & IVT - M (H) trial entry no.s 2406, 2409, 2425 showed mixture and off types. IVT - U(H) failed due to failure of one replication.

Later the team visited the trials conducted by CAU, Imphal, Manipur at farmers' fields. Two trials were conducted by the centre. Dr. Pushparani (Plant Breeding) conducted the trials. In AVT 2 & 1 & IVT - M (H) the entry no.s 2418 and 2421 showed high incidence of blast disease. Overall trial was in good condition. In IVT - U(H), the promising entries were 2504, 2511, 2510, 2512. Overall trial was in good condition. The team did not visit the Meziphma centre as the crop was already harvested by the time of monitoring visit.

PROGRESS REPORT
KHARIF 2025 VARIETAL IMPROVEMENT
AICRPR
NATIONAL BASMATI
TRIALS

ICAR-IARI, New Delhi

INITIAL VARIETY TRIAL – BASMATI (IVT - BT)

Locations: 11

Test Entries: 23

Checks and Recurrent Parents: Pusa Basmati 1 (YC & RP), Pusa Basmati 1121 (YC & QC), Taraori Basmati (QC), Pusa Basmati 1509 (OC & RP) Pusa RH 10 (HC), Local Check (LC)

Initial Variety Trial - Basmati (IVT-BT) was conducted as combined trial comprising of entries nominated for IVT-BT, AVT1-BT NIL, AVT2-BT NIL and AVT2-BT. The trial was constituted with 23 entries including 11 varietal test entries; 5 near-isogenic lines; 7 checks namely Pusa Basmati 1 (Yield Check), Pusa Basmati 1121 (Yield and Quality Check), Taraori Basmati (Quality Check), Pusa RH10 (Hybrid Check), Pusa Basmati 1509 (Observational Check and Recurrent Parent) Pusa Basmati 6 (Recurrent Parent) and local check (**Table 42.1**). Pusa Basmati 1509 was included as observational check during Kharif 2024 and Kharif 2025. Out of the 11 varietal test entries, 10 entries namely, IET 33268, IET 33269, IET 33270, IET 33271, IET 33272, IET 33273, IET 33274, IET 33275, IET 33276 and IET 33277 were in first year of testing (IVT-BT) and one entry IET 31299 was in III year of testing (AVT2-BT). Of the 5 NIL entries tested, one NIL of Pusa Basmati 1509 namely, IET 32297 was in final year of testing (AVT2-BT NIL); four NIL entries namely, IET 33278, IET 33279, IET 33280 and IET 33281 were in AVT1-BT NIL stage. Among these, IET 33278 and IET 33279 were NILs of Pusa Basmati 1121 possessing resistance to bacterial blight, blast and bakanae diseases, while, IET 33280 and IET 33281 were NILs of Pusa Basmati 6 possessing resistance to bacterial blight, blast and bakanae diseases. The trial was conducted at 11 locations in the GI area earmarked for the cultivation of Basmati rice. Out of 11 test locations, the data from 8 locations namely, New Delhi, Kaul, Nagina, Modipuram, Ludhiana, Rauni, Gurdaspur and Chatha was considered for analysis. The data from Pantnagar, Kapurthala and Karnal was not considered for analysis due to low experimental mean yield.

The experimental mean of the locations ranged from 2984 kg/ha at Pantnagar to 6296 kg/ha at Modipuram (BEDF), while CV ranged from 5.6% at Modipuram (BEDF) to 17.4 % at Karnal. Days to 50% flowering ranged from 85 days (Pusa Basmati 1509 and IET 32297) to 110 days (Pusa Basmati 6). Plant height of the entries ranged from 94 cm (IET 32297) to 136 cm (Taraori Basmati) while panicles per sq.m. ranged from 245 (IET 33273) to 350 (Pusa Basmati 1121). Among the checks, hybrid check, Pusa RH 10 registered 5671 kg/ha with 1st rank based on overall mean. The data on yield, days to 50% flowering, plant height, number of panicles/m², quality and panel test are presented in tables 42.2 to 42.9. The details on the performance of entries are presented below:

Performance of entries in AVT2-BT

One entry namely, IET 31299 was in third year of testing. It yielded 5305 kg/ha which was significantly superior to the best check variety Pusa Basmati 1121 which yielded 4566 kg/ ha.

On overall mean basis, the entry, IET 31299 (PAU 7842-13-2-1) derived from the cross Pusa Basmati 1718/Pusa 1601-105-46-1-1 was significantly high yielding (5305 kg/ ha) over the best check Pusa Basmati 1121. It recorded KLAC of 16.95 mm, elongation ratio (2.15), intermediate amylose content (22.81%) and strong aroma. **The entry IET31299 has completed three years of testing.**

IET No/ Designation/ Cross Combination	Trial	GY	FD	Grain Type	Yield over best check (%)	Performance Rank (%) increase over best check *		
						State	Yield	% over BC
IET 31299 (PAU 7842-13-2-1 (RYT 4087)) PB1718/Pusa1601- 105-46-1-1	IVT-BT	5207	106	ELS	24.8	DE	6253	5.67
						HA	4715	26.29
						UP	5950	32.22
						JK	4250	37.76
	AVT1-BT	4924	100	ELS	10.8	UP	5534	13.00
						HA	4711	15.00
	AVT2-BT	5305	105	ELS	16.2	PU	4991	33.97

*Data presented is for the states where the test entry was significantly superior over best check (CD at 0.05)

Performance of entries in IVT-BT (First year of testing)

A total of 10 entries were in first year of testing i.e., IVT-BT. The entries IET 33268, IET 33269, IET 33270, IET 33273, IET 33274 and IET 33277 were not significantly superior to the best varietal check Pusa Basmati 1121. Therefore, these entries have been discontinued from further testing.

The entry IET 33275 (SJR-121-2-2) recorded an average yield of 5413 kg/ha which was significantly superior over the best varietal check Pusa Basmati 1121. However, this variety did not meet the Basmati quality standards for the traits KLAC (>12.0 mm) and kernel elongation ratio (>1.7). Further this entry not acceptable as Basmati quality and ranked the last (Rank 23) in the panel test. Therefore, the entry IET 33275 has been discontinued from further testing.

The entry IET 33276 (HKR414) from the cross CSR30/ HKR98-76 performed significantly superior to the best varietal check Pusa Basmati 1121 with an average yield of 5514 kg/ha. The average KLAC was 13.15 mm with the elongation ratio of 1.6. The elongation ratio of the genotype was less than the Basmati quality standards (>1.7). Further, it was not acceptable as Basmati quality in the panel test. Therefore, the entry IET 33276 has been discontinued from further testing.

IET No/ Designation/ Cross Combination	Trial	GY	FD	Grain Type	Yield over best check (%)	Performance Rank (%) increase over best check		
						State	Yield	% over BC
IET33271/ PAU 9127-26-5 (RYT4256) Pusa Basmati 1509/PR126//Pusa Basmati 1509*2	IVT- BT	5310	88	ELS	16.29	DE	5348	20.28
						PU	4509	21.03
IET 33272 (PAU 7925-7-4-1-10-1- 1 (RYT4146) Pusa Basmati 1884-9-12-14/Pusa Basmati 1121//Punjab Basmati 4	IVT- BT	5587	94	ELS	22.35	PU	4893	31.35

The entry, IET 33271 (PAU 9127-26-5 (RYT4256)) generated from the cross Pusa Basmati 1509/PR126//Pusa Basmati 1509*2 performed significantly superior to the best varietal check Pusa Basmati 1121 with an average yield of 5310 kg/ha. The KLAC was 16.55 mm with

elongation ratio of 1.85 along with mild to medium aroma. The panel test results reveal that it has acceptable quality. The entry, **IET 33271 has been promoted to second year of testing, in the AVT1 trial.**

The entry IET 33272 (PAU 7925-7-4-1-10-1-1 (RYT4146) from the cross Pusa Basmati 1884-9-12-14/Pusa Basmati 1121/Punjab Basmati 4 performed significantly superior to the best varietal check Pusa Basmati 1121 with an average yield of 5587 kg/ha. The average KLAC was 16.55 mm with the elongation ratio of 1.9. It recorded acceptable to good score in the panel test. Therefore, **the entry IET 33272 has been promoted to second year of testing, in the AVT1 trial.**

Entries promoted to AVT1-BT: IET 33271 and 33272

Performance of AVT2-NIL entries

Near Isogenic Lines for herbicide tolerance and resistance to bacterial blight and blast diseases

The entry IET 32297 carrying the bacterial blight resistance genes *xa13* and *Xa21*; blast resistance genes, *Pi2* and *Pi54*; and herbicide tolerance gene *AHAS^{rb}* in the background of Pusa Basmati 1509 was evaluated for yield and grain quality in the regular Basmati trial; for testing bacterial blight, and blast resistance, the entries were evaluated in NSN conducted in hot spot regions of the Basmati GI locations; and for testing herbicide tolerance, a separate trial was conducted for evaluation under dryDSR conditions.

The entry along with its recurrent parent Pusa Basmati 1509 and checks, Pusa Basmati 1, Pusa Basmati 1121 and Pusa Basmati 1985 were evaluated under dryDSR conditions with following treatments across four locations namely, New Delhi, Ludhiana, Nagina and Kaul.

Treatment 1 : Imazethapyr 10% SL @2.0g/L applied at 18-22 DAS

Treatment 2 : Manual Weeding

Treatment 3 : Untreated control (weedy check)

Data from four locations namely, Kaul, New Delhi, Ludhiana and Nagina were analysed and the data is presented in following table:

Treatment	Entry	IET No	Kaul	DEL	LDN	NGN	Mean
T1: Imazethapyr 10% SL (X dose)	1805	PB1121 (YC)	0.0	0.0	0.0	0.0	0.0
	1814	PB1509 (OC & RP)	0.0	0.0	0.0	0.0	0.0

	1819	32297	1297	2233	3487	1420	2109
	1820	PB1 (YC)	1490	967	2873	1607	1734
	Check	PB 1985(LC)	1597	1533	3453	1557	2035
CD (0.05)			382.7	157.7	75.1	192.2	201.9

IET 32297 (Pusa 3139-1-151-1-3-4) exhibited at par performance with its recurrent parent Pusa Basmati 1509. For bacterial blight disease, it exhibited significantly reduced reaction to bacterial blight disease with average disease score of 5.8, while its recurrent parent was highly susceptible with average disease score of 8.2. For blast disease, the entry IET32297 was found resistant with DSI of 2.0, while its recurrent parent was susceptible with the disease score of 7. Quality wise, it is similar to its recurrent parent Pusa Basmati 1509. Under dryDSR trial, the entry IET 32297 was found to be tolerant to Imazethapyr and yielded 5033 kg/ha, as compared to the recurrent parent PB1509 which showed complete mortality. Additionally, it was significantly superior over the HT Basmati rice varietal check PB1985 under dryDSR conditions. The entry was verified for resistance to Bacterial blight, blast and herbicide tolerance, and was found to be at par with the recurrent parent for yield performance across two years of testing in NILs trials. **Therefore, IET 32297 has been identified as promising.**

Overall performance of the bacterial blight, blast and herbicide tolerant NIL evaluated during Kharif 2024 and 2025

Genotypes	Recurrent parent		IET32297	
	Pusa Basmati 1509		Pusa 3139-1-151-1-3-4	
Trials	AVT1-NIL	AVT2-NIL	AVT1-NIL	AVT2-NIL

Performance of AVT1-NIL entries

Near Isogenic Lines for resistance to bacterial blight, blast and bakanae diseases

Two NILs of Pusa Basmati 1121 namely, IET33278 and IET33279 carrying genes governing resistance to bacterial blight (*xa13, Xa21, Xa38*), blast (*Pi9, Pita*) and QTLs for tolerance to bakanae (*qBK1.1, qBK1.2*) disease were evaluated for yield and quality in the regular trial. Further, the NILs were evaluated for bacterial blight, blast and bakanae disease resistance under NSN trial. The NIL entry IET33278 was significantly lower yielding as compared to its recurrent parent Pusa Basmati 1121. Therefore, IET33278 has been discontinued.

The average yield of the NIL entry IET33279 was 4154 kg/ha which was at par with the recurrent parent, Pusa Basmati 1121. It was found resistant to bacterial blight disease with SI of 3.8 as compared to its recurrent parent, Pusa Basmati 1121, which was susceptible with SI of 6.6. The entry was resistant to blast disease with SI of 4.0 as compared to its recurrent parent which showed susceptible reaction with the SI of 6.5. For bakanae disease, the entry, IET33279 showed 65.28% less disease incidence under artificial inoculation conditions and 20.8% less incidence under field conditions as compared to its recurrent parent, Pusa Basmati 1121. Based on yield, grain and cooking quality as well as disease resistance score for bacterial blight and blast, the entry, **IET 33279 has been promoted to AVT2-NIL.**

Two NILs of Pusa Basmati 6 namely, IET33280 and IET33281 carrying genes for bacterial blight (*xa13*, *Xa21*) and blast (*Pi2*, *Pi54*) resistance and QTLs (*qBK1.1*, *qBK1.2*) for tolerance to bakanae disease were evaluated for yield and quality in the regular trial. Further, the NILs were evaluated for bacterial blight, blast and bakanae disease resistance under NSN trial.

The NIL entry, IET33280 yielded 4100 kg/ha which was as par with its recurrent parent Pusa Basmati 6. Further, for the bacterial blight disease, the entry showed the SI score of 6.6 as compared to its recurrent parent , Pusa Basmati 6, which showed SI of 8.6. For the blast disease, the entry IET33280 showed resistant reaction with SI of 2 as compared to its recurrent parent which showed susceptible reaction with SI of 6.0. For bakanae disease, the entry IET33280 showed 30.6% less disease incidence under artificial inoculation conditions and 41.7% less incidence under field conditions as compared to its recurrent parent Pusa Basmati 6. Based on yield, quality and disease resistance pattern, **the entry has been promoted to final year of testing (AVT2-NIL).**

The NIL entry, IET33281 yielded 3877 kg/ha which was as par with its recurrent parent Pusa Basmati 6. Further, for the bacterial blight disease, the entry showed the SI score of 6.2 as compared to its recurrent parent which showed SI of 8.6. For the blast disease, the entry IET33280 showed resistant reaction with SI of 2 as compared to its recurrent parent which showed susceptible reaction with SI of 6.0. For bakanae disease, the entry IET33280 showed 47.2% less disease incidence under artificial inoculation conditions and 13.9% less incidence under field conditions as compared to its recurrent parent, Pusa Basmati 6. Based on yield, quality and disease resistance pattern, **the entry has been promoted to final year of testing (AVT2-NIL).**

Entries promoted to AVT2-BT NILs: IET33279, IET33280, IET33281

LIST OF BREEDERS

ICAR-Indian Institute of Rice Research, Rajendranagar, Hyderabad-500 030		
Dr. R. M. Sundaram, Director		
Crop Improvement Division		
Plant Breeding		
Dr. S. V. Sai Prasad	:	Principal Scientist & PI, IIRR
Dr.J.Aravind Kumar	:	Principal Scientist
Dr. K. Suneetha	:	Principal Scientist
Dr. S. L. Krishna Murthy		Senior Scientist
Dr. Jyothi Badri	:	Senior Scientist
Dr. M. S. Anantha	:	Senior Scientist
Dr. R. Abdul Fiyaz	:	Senior Scientist
Dr. Divya Balakrishnan	:	Senior Scientist
Dr. Ch. Suvarna Rani	:	Scientist
Hybrid Rice		
Dr. A. S. Hari Prasad	:	Principal Scientist
Dr. P. Senguttuvel	:	Principal Scientist
Dr. P. Revathi	:	Principal Scientist
Dr. K. B. Kemparaju	:	Senior Scientist
Dr. K. Sruthi	:	Scientist
Biotechnology		
Dr. C. N. N. Neeraja	:	Principal Scientist
Dr. S. K. Mangrauthia	:	Principal Scientist
Dr. Kalyani Kulkarni	:	Scientist
Agricultural Statistics		
Dr. Sailaja B	:	Principal Scientist (Computer Science)

ICAR-Central Rice Research Institute, Cuttack-753 006, Odisha		
Dr. G A K Kumar — Director		
Crop Improvement Division		
Dr. (Mrs.) Meera Kumari Kar	:	PS & Head, CID, Nodal Officer AICRIP (Rainfed)
Dr. Lamobodar Behera		Principal Scientist
Dr. Lotan Kumar Bose		Principal Scientist
Dr. K. Chattopadhyay	:	Principal Scientist & Co-Nodal Officer AICRIP (Rainfed)
Dr. Sushanta Kumar Dash	:	Principal Scientist & Co-Nodal Officer AICRIP (Rainfed)
Dr. J. Meher	:	Principal Scientist
Dr. Mridul Chakraborti	:	Senior Scientist
Dr. Jawahar Lal Katara		Senior Scientist
Dr. Ramlakhan Verma	:	Senior Scientist
Dr. Rameswar Prasad Sah		Senior Scientist
Shri B. C. Marndi		Scientist SG
Dr. (Mrs.) P. Sanghamitra	:	Senior Scientist

Annual Progress Report 2025 Vol. I – Varietal Improvement

Dr. Kutubuddin Ali Molla		Senior Scientist
Dr. (Mrs.) Sutapa Sarkar	:	Senior Scientist
Dr. Parameswaran C.		Senior Scientist
Dr. Devanna		Scientist
Dr. (Mrs.) Reshmi Raj K. R		Scientist
Dr. Anilkumar C		Scientist
Dr. N. N. Jambhulkar	:	Senior Scientist (Social Science)
Dr. Torit Baran Bagchi	:	Senior Scientist (Crop Physiology & Biochemistry)

ICAR-Indian Agricultural Research Institute, New Delhi - 110 012		
Dr. Ch. Srinivasa Rao — Director		
Division of Genetics		
Dr. Gopal Krishnan S	:	Principal Scientist & Head
Dr. K. K. Vinod	:	Principal Scientist
Dr. Akshay Talukdar	:	Principal Scientist
Dr. Prolay K. Bhowmick,	:	Senior Scientist
Dr. Haritha Bollinedi	:	Scientist (Sr. Scale)
Dr. Ranjith K. Ellur		Scientist

List of Technical Personnel

Mr. M. Vijay Kumar	:	Senior Technical Officer	Ms. Rosalin Swain	:	Sr. Technical Officer
Mr. K. Ramulu	:	Technical Officer	Mr. Lalan Kumar Singh	:	Sr. Technical Officer
Mr. Md. Tahseen	:	Technical Officer	Mr. Bidyasagar Mandal	:	Technical Officer
Mr. Sadath Ali	:	Technical Officer	Mr. Debakanta Nayak	:	Sr. Technical Assistant
Mr. P. Koteswara Rao	:	Sr. Technical Asst.	Mr. Debabrata Samal	:	Sr. Technical Assistant
Mr. Raj S. Wankhede	:	Technician	Mrs. Baneeta Mishra	:	Sr. Technical Assistant
Mr. R. Sathamaiah	:	Field Technician	Mr. Manoj Patra	:	Sr. Technician
Mr. Devinder Singh	:	Technical Officer			
Mr. Chandrakumar	:	Field Technician			

AICRPR Cooperators Addresses

S.No	Location	Funded/ Voluntary	Name & Designation /Organization & Addresses / Tel. No/ Mobile No./ email
1	Aduthurai	Funded	Dr. M. Dhandapani , Asst. Professor, (Plant Breeding & Genetics), TRRI, Aduthurai-612101, Tamil Nadu, 8825865756 (M), dhanda1977@gmail.com
2	Almora	Voluntary	Dr. J. P. Aditya , Senior Scientist, ICAR-VPKAS, Mall Road, ALMORA – 263601, Uttarakhand, 05962 241003 (O), 09410795850 (M), jpaditya2021@gmail.com jpaditya4011@rediffmail.com jayaprakashaditya@gmail.com
3	Ambikapur	Voluntary	Ms. Kiran Tigga , Scientist (Genetics & Plant Breeding), R. M. D. College of Agriculture & Research Station, Ajirma, Ambikapur (C.G.) 497001, kiranascoraipur@gmail.com , 9926942063 (M)
4	Annamalainagar	Voluntary	Dr. Y. Anbu Selvam , Professor and Head, Dept. of Genetics and Plant Breeding, Faculty of Agriculture, Annamalainagar University, Annamalainagar- 608 002, CuddaloreDist, Tamilnadu, 9787069501 (M)
5	Annamalainagar	Voluntary	Dr. K.R. Saravanan , Asst. Professor, Dept. of Genetics and Plant Breeding, Faculty of Agriculture, Annamalainagar University, Annamalainagar- 608 002, CuddaloreDist, Tamilnadu, 09940031431 (M). saravan_rangan@rediffmail.com
6	Arundhutinagar	Funded	Dr. Uttam Saha , Joint Director of Agriculture (Research), Department of Agriculture & F.W. Tripura, 9366120483, sarstripura@gmail.com , 9366120483
7	Bhaderwah		Dr Neeraj Kotwa
8	Bajaura	Voluntary	Dr.Gurudev Singh , Scientist (Agronomy)-cum-P.I. (Linseed), Department of Genetics and Plant Breeding, COA, CSKHPKV, Palampur, Himachal Pradesh- 176 062, 09418479856, gdevsaandil@rediffmail.com
9	Bajaura	Voluntary	Dr. Neha Sharma , Assistant Professor (Genetics & Plant Breeding) CSK HPKV HAREC Bajaura, Kullu, H.P.- 175125 India, 9736909876 (M). nsh9149@gmail.com
10	Bharuch	Voluntary	Vineeth T V , Scientist (Plant Physiology), Central Soil Salinity Research Institute (ICAR-CSSRI), Bharuch, Gujarat 392012, 9746884857 (M) vinee2705@gmail.com
11	Bankura	Funded	Dr. Chandan Kumar Bhunia , Joint Director of Agriculture (Mycology & Plant Pathology), Rice Research Station, Bankura, Nutanchati, P.O. & District Bankura, PIN 722101, West Bengal, 03242-251306 (O), 6289633761 (M) , rrsbankura@gmail.com
12	Bapatla	Voluntary	Dr. B.KrishnaVeni , Senior Scientist (Breeding), Agricultural Research Station, (ANGRAU). Agricultural College farm Campus, Bapatla, Guntur (Dt.)- 522 101; 08643225901 (Telefax), 9441721120 (M) krishnavenirru@gmail.com

Annual Progress Report 2025 Vol. I – Varietal Improvement

S.No	Location	Funded/ Voluntary	Name & Designation /Organization & Addresses / Tel. No/ Mobile No./ email
13	BEDF, Modipuram	Voluntary	Dr.Ritesh Sharma , Principal Scientist, Basmati Export Development Foundation (BEDF), Modipuram, MEERUT – 250 110, Uttar Pradesh, 09412705048 (M),0121-2888554 (O)riteshbedf5048@gmail.com
14	Bhubaneswar	Voluntary	Dr. Jayashree Kar ,Officer In-Charge-Rice Research Station, DEPARTMENT OF PLANT BREEDING & GENETICS, COLLEGE OF AGRICULTURE ODISHA UNIVERSITY OF AGRICULTURE & TECHNOLOGY, BHUBANESWAR-751 003, ODISHA
15	Bikramganj (Dhangain)	Funded	Dr. Prakash Singh , Assistant Professor-cum- Rice Breeder, AICRIP, Botanical Research Unit (BRU), DHANGAIN-802 212, P.O.-Bikramganj, Distt.-Rohtas, Bihar, 9452948860 / 7004181244 (M) prakash201288@gmail.com psingh_gene@yahoo.com
16	Bilaspur	Voluntary	Dr. D.J. Sharma , Scientist, Dept. of Genetics & Plant Breeding, C.A.R.S., IGKV, Bilaspur-495 001,Chhattisgarh, (O) 07752-254379, 07752-254380djs@rediffmail.com
17	Brahmavar	Funded	Dr.Shridevi A. Jakkeral , Junior Rice Breeder (AICRIP on Rice), Zonal Agricultural & Horticultural Research Station, Kunjal Road, Brahmavar-576 213, Udupi Dist. Karnataka;0820-2561011 (O), 9611780850(M) gowrishrigpb@gmail.com
18	Canning	Voluntary	Dr. Nitish R. Prakash , Scientist, Genetics & Plant Breeding, ICAR- Central Soil Salinity Research Institute, Regional Research Station, Canning Town - 743329, South 24 Parganas, West Bengal, 03218-255241 (O), 07834810111 (M), nitishranjan240@gmail.com
19	Canning	Voluntary	Dr. Devika S. Scientist , Plant Physiology, ICAR-CSSRI, RRS, Canning ,9597645309, devikasellathdurai@gmail.com
20	Chatha	Funded	Dr. Ravinder Singh Sudan , Senior Scientist and Incharge AICRIP (Rice), Division of Plant Breeding &Genetics, SKUAST-Jammu, FoA, Main Campus, Jammu-180009, 9419159975 (M), rssudanudh@gmail.com
21	Chinsurah/ Gosaba	Funded	Dr.Indrani Dana , Joint Director of Agriculture (Rice Dev.),Rice Research Station (Government of West Bengal), Chinsurah (R.S.)-712 102, Hooghly, West Bengal, 033-26861149, 033-26862484 (O)jdarice1932@gmail.com
22	Chinsurah	Funded	Dr. Bijan Adhikari , Rice Breeder RRS, Chinsurah, Rice Breeder RRS, Chinsurah, Govt of West Bengal, Chinsurah R.S. Hooghly, Pin 712102, 9433643509(M), adhikaribijan@gmail.com
23	Chinsurah	Funded	Dr.monoranjan jana , Rice Physiologist, RRS,Chinsurah,Hooghly,712102,,W.B. monoranjanjana8@gmail.com

Annual Progress Report 2025 Vol. I – Varietal Improvement

S.No	Location	Funded/ Voluntary	Name & Designation /Organization & Addresses / Tel. No/ Mobile No./ email
24	Chinsura	Funded	Dr. Mitali Chatterjee , Assistant Botanist, W.B.A.S (Research)Rice Research, Station, Chinsurah, Hooghly Govt. of West Bengal, Pin- 712102, mitali.mchatterjee@gmail.com, 9874299507
25	Chiplima	Funded	Dr. Pamirelli Ranjith , Assistant Professor/ Rice Breeder. AICRIP, Regional Research and Technology Transfer Station, (OUAT), Chiplitma-768025, Sambalpur, Odisha, 09492639312; 08919716454 ranjithpbguat@gmail.com
26	Coimbatore	Funded	Dr. S. Manonmani , Professor (Plant Breeding) & Head, Department of Rice, Centre for Plant Breeding & Genetics, Tamil Nadu Agricultural University, Coimbatore - 641 003, Tamil Nadu; 0422 2474 967 (O), 0422 6611 415 (F), 9443376334 (M), rice@tnau.ac.in
27	Cuttack	Voluntary	Dr. (Mrs.) Sanghamitra Samantaray , Principal Scientist & Head, Crop Improvement Division, ICAR-National Rice Research Institute, Cuttack-753 006, Odisha, 09937171699 (M) aicripnrri@gmail.com smitaray@gmail.com
28	Cuttack	Voluntary	Dr. Meera Kumari Kar , Principal Scientist, Crop Improvement Division, ICAR-National Rice Research Institute (NRRI), Cuttack-753006, Odisha 94380 82075 (M) meera_kar@hotmail.com meerakkar@gmail.com
29	Cuttack	Voluntary	Dr. L. K. Bose , Principal Scientist, Crop Improvement Division, ICAR-National Rice Research Institute (NRRI), Cuttack -753006, Odisha, 09437670122 (M) lotankbose@yahoo.com
30	Cuttack	Voluntary	Dr. Krishnendu Chattopadhyay , Principal Scientist, Crop Improvement Division, ICAR-National Rice Research Institute (NRRI), Cuttack -753006 , Odisha 9178248015(M) krishnenducrri@gmail.com
31	Cuttack	Voluntary	Dr. S. K. Dash , Principal Scientist, Crop Improvement Division, ICAR-National Rice Research Institute (NRRI), Cuttack -753006, Odisha, 07978691066/09040384910(M)skdash139@gmail.com
32	Cuttack	Voluntary	Dr. B. C. Marndi , Scientist (SG), Crop Improvement Division, ICAR-National Rice Research Institute (NRRI), Cuttack -753006, 07008186979(M) bmarndicri@gmail.com bc_marndi_cri@yahoo.co.in
33	Cuttack	Voluntary	Dr. J. Meher , Senior Scientist (SS), Crop Improvement Division, ICAR-National Rice Research Institute (NRRI), Cuttack -753006, Odisha, 9937437459 (M) jmehercrrri@gmail.com
34	Cuttack	Voluntary	Dr. Mridul Chakraborti , Senior Scientist, Crop Improvement Division, ICAR-National Rice Research Institute (NRRI), Cuttack-753006, Odisha; 09932032400 (M) Mridul.Chakraborti@icar.gov.in

Annual Progress Report 2025 Vol. I – Varietal Improvement

S.No	Location	Funded/ Voluntary	Name & Designation /Organization & Addresses / Tel. No/ Mobile No./ email
35	Cuttack	Voluntary	Dr. Ramlakhan Verma , Senior Scientist, Crop Improvement Division, ICAR-National Rice Research Institute (NRRI), Cuttack-753006, Odisha; 8847841041 /8895237769 (M) ramlakhan.verma@icar.gov.in ram.pantvarsity@gmail.com
36	Cuttack	Voluntary	Dr. Sutapa Sarkar , Scientist, ICAR-National Rice Research Institute (NRRI), Cuttack-753 006, Odisha, 09437142920 (M) sutapasarkar1310@gmail.com
37	Derol	Voluntary	Dr. M. B. Patel , Unit Head & Assoc. Res. Scientist, Agricultural Research Station, (Anand Agricultural University) Derol-389320, Tq. Kalol, Dist. Panchmahal (Godhra), Gujarat, 02676- 235528 (O), 09601534177 (M), arsdерol@gmail.com ; arsdерol@aau.in ; manishgau@aau.in
38	Gangavati	Funded	Dr. Mahantashivayogayya K Hiremath , Senior Breeder (Rice), AICRP-Rice Scheme, Agricultural Research Station, Gangavati -583 227, Dist. Koppal, Karnataka 08533-270143 (O), 09845639892 (M) mahant.shivayogayya2@gmail.com
39	Gangavati	Funded	Dr. Shwetha B N , Senior Scientist (Agronomy), AICRP on Rice, ARS, Gangavathi, UAS, Raichur, 8310096211
40	Gangavati	Funded	Dr. Sujay Hurali , Senior Scientist (Entomology), AICRP on Rice, ARS, Gangavathi UAS, Raichur 81054 27775
41	Gangtok	Voluntary	Dr. Ramgopal Devadas , Principal Scientist (Genetics & Plant Breeding), ICAR Research Complex for North East Hill region, Sikkim Centre, Tadong (Post), (DARE, MoA, Government of India), Gangtok 737102, Sikkim, India, 0801627 2553 (M), Ramgopal.Devadas@icar.gov.in
42	Gerua	Voluntary	Dr. Kanchan Saikia , Principal Scientist (Entomology) & In-Charge Head, ICAR-NRRI RRLRRS, Gerua, Hajo, Kamrup -781102, Assam, 09436108770 (M), kanchansaikia@yahoo.com
43	Gerua	Funded	Dr. Amitabha Chakrabarti , Sr. Plant Breeder, SARS, Arundhatinagar, Agartala, West Tripura, 7662887386, amit20242024@gmail.com, sarstripura@gmail.com
44	Goa	Voluntary	Dr. K. K. Manohara , Senior Scientist (Genetics & Plant Breeding), Crop Sciences Section, ICAR-Central Coastal Agricultural Research Institute, Ela , Old Goa, Goa – 403402, 0832-2284678/79 (O), 0832-2284607 (R), 07507943679 (M), 0832-2285649 (F) manohar.gpb@gmail.com
45	Gorakhpur	Voluntary	Prof. B. N. Singh , Chairman, Center for Research & Development, 605 B, Mohaddipur North, Shiwala Marg, Gorakhpur-273008, Uttar Pradesh, baijsingh65@gmail.com

Annual Progress Report 2025 Vol. I – Varietal Improvement

S.No	Location	Funded/ Voluntary	Name & Designation /Organization & Addresses / Tel. No/ Mobile No./ email
46	Gudalur	Voluntary	Dr. S. P. Thamaraiselvi Ph.D.,Asst. Prof. (Horticulture) and Head (i/c),Hybrid Rice Evaluation Centre, Tamil Nadu Agricultural University, 5/42a, Puliamparai Post, Gudalur-643 212. 04262-264945 (O), 9843338666 (M), thamaraiselvi.sp@tnau.ac.in arsgudalur@tnau.ac.in
47	Gudalur	Voluntary	Dr. D. Kumaresan , Professor (PBG), Hybrid Rice Evaluation Centre, Tamil Nadu Agricultural University, Gudalur 9443409996 (M) kumaresan.d@tnau.ac.in; arsgudalur@tnau.ac.in
48	Hathwara	Voluntary	Koushik Murmu , Assistant Botanist, Zonal Drought Resistant Paddy Research Station, Hathwara, V. Nagar, Purulia, 723147, W.B.
49	Hathwara	Voluntary	Dr. Uday Sankar Ray , Assistant Botanist, Zonal Drought Resistant Paddy Research Station, Dept. of Agriculture, Govt. of West Bengal, Hathwara, P.O : V. Nagar, Purulia-723 147, West Bengal, 03252-201191 (O),08900606271(M) zdrprs@gmail.com uday_rmp@rediffmail.com
50	Hazaribagh	Voluntary	Dr. N. P. Mandal , Principal. Scientist (Plant Breeding), ICAR-NRRI-CRURRS Post Box- 48, Hazaribag-825 301, Jharkhand 06546-222263 (O),06546-224506 (R) 09430391164(M), 06546-223697 (F) npmandal@hotmail.com nimai.mandal@gmail.com
51	Hazaribagh	Voluntary	Dr. Somnath Roy , Senior Scientist (Plant Breeding) ICAR-CRRI-CRURRS, Hazaribag, 9402196952(M), sroypr@gmail.com
52	Hazaribagh	Voluntary	Dr. Priyamedha , Senior Scientist (Plant Breeding) ICAR-CRRI-CRURRS, Hazaribag, 9057530007(M), priyamedha.pb@gmail.com
53	Imphal, CAU	Voluntary	Dr. Pushparani Senjam , Scientist (AICRP- Rapeseed & Mustard)) 9748131212. puspasenjam@gmail.com
54	Imphal, Manipur	Voluntary	Dr. Konsam Sarika , Scientist (Genetics and Plant Breeding), ICAR RC NEHR Manipur Centre, Lamphelpat, Imphal - 795004; 8787401857, konsams@gmail.com

Acknowledgements

The All India Coordinated Rice Improvement Project (AICRIP) has made significant contributions since its inception to rice research. This is 60th year of successful conduct of AICRIP. At the outset, we are indebted to all the scientists working at the various funded and voluntary centers across India for successfully conducting the AICRIP trials, participating in the monitoring tours and timely submission of the trial data. Special compliments to the scientists of the Crop Improvement Section in general and Plant Breeding department at ICAR-Indian Institute of Rice Research (IIRR), ICAR-National Rice Research Institute (NRRI) and ICAR- Indian Agricultural Research Institute (IARI) in particular for their hard work and perseverance without which it would not have been possible to complete the AICRIP report and publish it in time.

The help and services provided by the technical staff, senior research fellows, research associates, project staff, students and skilled assistants of plant breeding and hybrid rice departments in completing different works associated with coordination is greatly appreciated. Many thanks to the help and support extended by Mr. M. Vijay Kumar, Mr. Chandrakumar, Mr. Sadath Ali, Mr. P. Koteswar Rao, Mr. R. Sathamaiah, Mr. Sai Teja, E. Bhaskar, G. Pragathi, P. Akshay, P. Srikanth, G. Vikas & Mrs B. Swathi Mr. M.Suresh, Ms. K. Chaitanya, Subhashree Nayak (GA) and Ranjan Kumar Bhoi and Mr. Raj Wankhede for their commitment in packing of seed materials, conduct of trials, data recording, data entry and verification and other activities related to AICRIP. Special thanks to AKMU team, specially Mrs. Gayathri, Mr. Sai etc., The services of Mr. G. Krishna Reddy, Mr. Narsing Rao and other staff of quality lab deserve special appreciation for their help in quality analysis. Also, the contribution of Mr. Mohd. Tahseen in packing of trials and their timely dispatch to the cooperators deserves a special mention.

Special acknowledgements are to Mr. Raj Wankhede, Mr. Sai Teja and Mr. K. Ramulu for his extensive contribution to the coordination work in the preparation of trial constitution, seed dispatch, data analysis; report typing, tables and appendices, providing other key inputs including typesetting and layout of AICRIP report. We are thankful to Mr. Sai Teja for their help and support in AICRIP related works including typesetting. We also thank the skilled and unskilled assistants of Plant Breeding and Hybrid Rice and other staff of ICAR-IIRR for their contribution and support.
